WE JUST CUT \$200 OFF OUR MOST POPULAR COMPUTER EVER!

The Tandy 1000 with DeskMate™
software is now only \$999

Monthly Calendar
Highlights Current Date

Function Menu Displays
the Files You Have
Created for Six
Different Applications

Tandy 1000 Is Your Key to Great Software

Whatever your personal applications needs, the Tandy 1000 is for you. Tandy 1000 is compatible with the IBM PC, giving you one of the widest selections of software available today.

And unlike other personal computers, Tandy 1000 even comes with valuable software when you buy it. We call it DeskMate, and it puts your Tandy 1000 to work right away with word processing, spreadsheet analysis, electronic filing, telecommunications, scheduling and electronic mail. DeskMate may be the only program you'll ever need!

Daily Appointment

for Quick and
Easy Reference

You Get So Much More . . . For So Much Less

A Tandy 1000 costs less than IBM's PC, and comes complete with adapters to use a color or monochrome monitor, printer, joysticks and light pen. These adapters, as well as a disk operating system (DOS) and BASIC, are "extras" on the IBM PC!

Best of all, the Tandy 1000 has a new low price—only \$999 (25-1000. Was

\$1199.00 in Cat. RSC-14). Add either a monochrome or color monitor and you're ready for business.

Come in today and get the most computer you can buy for your money.

Available at over 1200
Radio Shack Computer Centers and at
participating Radio Shack stores and dealers.

Monitor sold separately. Prices apply at Radio Shack Computer Centers and at participating stores and dealers. DeskMate™ Tandy Corporation. IBM Registered TM International Business Machines Corp.

Did you know? Only one spelling checker:

- works with both Scripsit and Superscripsit.
- integrates with all other popular word processing programs as well.
- requires *no special document placement!* Even runs on a single drive system.
- displays its dictionary so that you can find the correct spelling of words.
- offers integrated Hyphenation Option and Grammar & Style checker.

Electric Webster

SPELLING CHECKER • AUTO-HYPHENATION • GRAMMAR CHECKER

Displays Correct Spellings: If you don't know the correct spelling of a word, EW will look it up for you, and display the dictionary.

Verifies Corrections: If you think you know the correct spelling of a word, EW will check it for you before making the corrections.

Hyphenates Automatically: (Optional). Inserts discretionary hyphens throughout text.

Grammar & Style Checker: (Optional). Identifies 22 types of common errors. Makes suggested corrections with the stroke of a key. Runs within EW.

50,000 Word Dictionary: Uses only 2½ bytes per word; add as many words as you wish.

Fast Correcting: In as little as 30 seconds, Electric Webster can return you to your Word Processing program, with your text fully corrected and on your screen.

Integrates: with WordStar, Deskmate, Spellbinder, Volkswriter, Open Access, Allwrite, Newscript, Lazy Writer, Superscripsit, Scripsit, Electric Pencil, Copy Art, Powerscript, Zorlof, and LeScript (specify). Begins proofing at the stroke of a key; returns you to word processing automatically.

When ordering, stipulate word processing program and operating system.

**"The Cadillac"
of spelling checkers**
— 80 *Microcomputing*, 9/82

ACCLAIMED:

"Electric Webster is the best. Just read any review in any magazine and I don't believe that you will find even one disagreement to that statement." *CIN-TUG, Cincinnati's Users Group Mag.* 4/83

"The most helpful program I've found is Electric Webster. After looking at nine proofreading programs, I've settled on Webster..." *Creative Computing* 11/83

This dictionary is not published by the original publishers of Webster's Dictionary or their successors.

Performance "Excellent"; Documentation "Good"; Ease of Use "Excellent"; Error Handling "Excellent". *Info World*, 8/82

"Electric Webster, a fantastic spelling and grammar checker" *80 Micro* 4/85

Now see for yourself!

Try Before You Buy:

For the second straight year, 80 Micro readers have voted Electric Webster the #1 Spelling checker. Find out for yourself how accurate, fast and easy proof-reading can be. For only the \$5 cost of postage, materials and handling, we will send you a special Electric Webster demonstration disk that works just like Webster, but proofs only half the alphabet. With it, you'll get a coupon worth \$5 towards the purchase of Electric Webster.

POST OFFICE BOX 6111, ALBANY, CALIFORNIA 94706, PHONE (415) 524-8098

THE SOURCE OF TRS-80 SOFTWARE!

IF YOU BOUGHT YOUR SOFTWARE ELSEWHERE, YOU PROBABLY PAID TOO MUCH

JMG is one of the largest sources of TRS-80 software around. We specialize in software for Models I, III, and 4. Our prices are the best, and if you find a better price then we'll beat it! (see pricing policy) As well, we support the programs we sell. Our software is only all top-quality, and our 99% satisfaction rate speaks for itself. With the best prices, selection, and support all on your side, you can't lose! Model 4 owners: All Model 3 programs we sell will work on the Mod. 4 in "III mode". Remember that JMG now offers FREE SHIPPING on all orders to the continental U.S. or Canada of over \$25!

HITCHHIKER'S GUIDE TO THE GALAXY

One of the best and newest games from Infocom. A hilarious Science Fiction Adventure game developed from Douglas Adam's best selling novel. Your mission... finding that out is half the fun, as you travel the lengths of the Galaxy, encountering strange and often deadly creatures. This game is a definite must for any avid adventurer, or any eager beginner.

MODEL 3/4 ONLY \$34.50

SUPREME RULER PLUS

The cornerstone of JMG, this game combines strategy with common sense. The goal is to defeat opposing countries while at the same time properly caring for your own country. Battle computer countries, other humans, or combinations of both (up to nine countries total). An entertaining and educational simulation of government policies and their consequences.

MODELS 1/3/4 (disk or cassette) \$26.50

WARRIORS AND WARLOCKS

A role-playing fantasy game based loosely on the hit Dungeons and Dragons. Your long-term objective is develop characters strong enough to survive exploration of the Castle. The full game takes six months to play and provides many rooms and levels. A sure hit with any D & D fanatics.

MODELS 1/3 \$39.50

PRONTO

Specifically designed for the 128K TRS-80 Model 4/4P. Controls variable sizes "windows" (maximum size of a window is screen size, and up to four windows can be opened at one time). Manages applications programs which can be invoked at the touch of a button. Provides a SuperVisor Call facility for assembly language programmers to interface with the window controller. Some window applications Included In PRONTO are: Index File, Appointment File, Calendar File, Calculator, Card Filer/Notepad, Character Set, Dialer, Mini-Terminal, and Screen Saver.

Model 4/4P Only (List \$50.00) \$46.50

LE SCRIPT

Our best selling word processor, loaded with many features not found anywhere else. Characteristics of Le Script include great printer support, ease of use, full Model 4 support, and much much more! On a 128K Model 4 you can have over 90K of text buffer for use on a single file (not split) into multiple buffers as is the case in other WP programs). Model 4 features also available while running in the Model 3 mode! The same program will run under most DOSes, from TRSDOS 2.3 on a Model 1 to DOSPLUS IV on a Model 4. At our low price, this is the best word processing value anywhere.

LE SCRIPT Model 1,3,4 (list \$129.95) \$94.50

WORD PROCESSING PACKAGE DEAL

Buy both LE SCRIPT and ELECTRIC WEBSTER together and save even more! These two programs work great together, so if you're getting into serious word processing, this is the "first class" way to go. This offer is only available for a limited time!

SAVE \$80 OFF THE LIST PRICE!!!

W.P. PACKAGE DEAL \$199.50

THE FRENCH CONNECTION

By far the most powerful Bulletin Board System for Models I, III, and 4(III). TFC is written in 100% Z80 Assembly language for both efficiency and security. Features Upload/Download, open access or private password, layered menus, individual user modifications, and much, much more. (See also separate ad in this publication!).

INTRODUCTORY OFFER (Models 1/3/4) \$99.50

SPECIAL PRICE REDUCTIONS!!! POWERDOT II

"The best high-resolution bit-image graphics program on the market for the TRS-80." Your screen becomes a window on your larger full-page drawing board. AUTOORAW feature for lines and circles. The creation of large graphics is easy. Design and save your own graphic characters as well. Does not need a high-res board to produce high-res graphics. POWERDOT II is 100% Machine Language and supports Epson, ProWriter, Okidata and Radio Shack printers. (Please specify printer when ordering.)

MODELS 1/III/4(III) \$29.50

POWERMAIL PLUS

Extremely advanced, yet simple to use. Mailing List program. Written in Machine Language for the quickest operating speed. Records can easily span multiple drives. Also converts existing file from any other mail systems.

MODELS 1/III/4 \$ 98.50
with Text Merge option \$128.50

SUPERCROSS XT

A program designed specifically for transferring data and program files freely between your own TRS-80 disks and those of many other computers. Eliminates the need for modems, terminal programs or access to a second computer. You can copy programs from 70 different DOS formats directly. Also FORMATS, displays DIRECTORY or KILLS files on alien disks, and can even copy "FOREIGN-TO-FOREIGN" in one step. Copies ASCII, Bit-Image, and Random Files back and forth.

MODELS 1/III/4 \$ 94.50
with Convert Basic Option \$112.50

ELECTRIC WEBSTER

The best word processor for the TRS-80 Computers. Includes a 50,000 word dictionary, and integrates with most word processors. Features fast checking, interactive correcting, and the ability to add your own words to its dictionary. Not much more you can say about this program, just that it does the job and it does it very well. (Get it quick, before the price goes up to \$129.50) Specify computer & word processor when ordering.

ELECTRIC WEBSTER, Model 1,3, or 4 (list \$149.95) \$119.50
E.W. Grammar of Hyphenation (list \$49.95) \$38.50

TAS Public Domain Disks

These disks contain a collection of quality public domain programs from all over. There's a wide selection here, from games to utilities to applications, and much more! Each disk is a 40 track "floppy" disk, and both sides are filled to the brim.

PUBLIC DOMAIN DISK PACKAGE, #1 to #4 \$34.50
PUBLIC DOMAIN DISK PACKAGE, #1 to #6 \$49.50
PUBLIC DOMAIN DISK (Specify #1 to #6) each \$9.50

PASCAL-80 (NOW ON SALE!!!)

The easiest version of PASCAL to learn! You get extensions to PASCAL that give you screen control, random access files, calls to machine language, the ability to create turn-key packages, etc. PASCAL-80 is a nearly complete subset of standard PASCAL, including structured types, records, pointers, variables and files. Editor and Compiler are in the memory.

PASCAL-80, Models 1,3 or 4 (list \$79) SALE PRICE \$59.50

GREAT PROGRAMS, GREAT PRICES AND FREE SHIPPING!!!

This month we have some new items in our line-up, such as the impressive PRONTO windowing systems from Misosys, which includes some very useful built-in applications that can be called up at any time. Also, we have the new BAS GW Convert program for converting IBM programs to Model 4, special formats of the Disk Drive Analyzer program, and new low prices on PowerDot and PowerMail. Plus, of course, our usual collection of top-quality software for the TRS-80 Models I, III and 4.

ORDERS & INFORMATION: (416) 575-2867

Use this number for ordering and for technical information. Phones are usually staffed Monday to Saturday, 10 A.M. to 7 P.M.

MONTHLY SPOTLIGHT

KSoft's LOG and SUPERLOG

Versatile "Electronic Notebook" that allows you to access stored information at the touch of a key, keeps notes, memos, lists, or other information in instantly accessible "pages". SUPERLOG4 for the Model 4 also contains many advanced features and commands that will make you wonder how you ever lived without it.

LOG for Model I or III	\$44.50
SUPERLOG for Mod I or III LDOS	\$99.50
SUPERLOG4 for Model 4 (List \$119.95)	\$99.50

OUR PRICING POLICY:

We will beat any legitimate price advertised for any product that we carry. If you find a lower price advertised, our price will be \$1.00 less, under the same conditions (eg. same shipping and other charges, etc). To receive the lower price you must mention the location of the other ad when ordering.

TO ORDER:

We accept orders by phone or mail. When ordering please specify the Model of TRS-80 that you own, the exact program(s) wanted, and the method of payment. We accept Check, Money Order, VISA, MasterCard. (For Electric Webster please mention your word processor.) All prices are listed in U.S. Funds.

CONVERSION CORNER

BASIC 3 TO 4 CONVERT

Operates under Model 4 TRSDOS 6.x, CP/M, MSDOS (general), and MSDOS (2000). Converts Model III programs to run under these systems, inserts spaces and translates commands where necessary. Please specify which version you want.

Basic 3 To 4 Convert (list \$49.95)	\$39.50
-------------------------------------	---------

BASIC 4 TO 3 CONVERT

Operates on Model I & III DOSes. Converts programs from Model 4 Basic. Similar to Basic 3 To 4 Basic 4 To 3 Convert (list \$49.95)

Basic 4 To 3 Convert (list \$49.95)	\$39.50
-------------------------------------	---------

BASIC GW CONVERT

A collection of programs and subroutines designed to translate IBM BASIC programs for use on TRS-80 Model 4. Will even convert high-res graphics if you have a high-res graphics board. MODEL 4/4P ONLY (list \$99.95)

MODEL 4/4P ONLY (list \$99.95)	\$69.50
--------------------------------	---------

OUR GUARANTEE:

We sell only top-quality software. If, however, you are unsatisfied with a product you have purchased from JMG, you may return it (in good condition) within 10 days for a refund, less a \$2.50 handling charge for programs under \$50 (\$5.00 for programs over \$50). We also ask that you send us a letter stating the reason for your return.

THE FINE PRINT:

Regular shipping in continental US and Canada is FREE (our choice of method). COD orders add \$2.50 to cover COD costs. PO's accepted for gov't & schools, add \$5.00 handling charge. Overseas orders will be charged actual shipping costs, specify surface or air. All prices subject to change without notice.

NEW!

IS YOUR PRINTER TOO SHORT FOR YOUR SPREADSHEET?

LONGVIEW turns a **VisiCalc** (R) spreadsheet on its side so that **DOTWRITER** can print it down the paper instead of across. It gives you the effect of a 400-character wide printer (or even longer, if your spreadsheet is that big).

The number of "rows" becomes the limit when you print this way; you can fit between 48 (Microline 92) and 180 (C.I.TOH 1550) rows across the page.

LONGVIEW is an "add-on" to our Dotwriter system. It includes programs and three character sizes, and runs on 48K-64K TRS-80 Models I, III, and 4/4P (native Model 4 mode). Please see our ad later in this magazine for information and pricing on Dotwriter, and the printers we support.

LONGVIEW is easy to use and comes with ready-to-run setups. First, tell **VisiCalc** to print your spreadsheet to disk. Next, rotate the file with **LONGVIEW**. Then, print it with **Dotwriter**. That's all there is to it.

LONGVIEW . . . \$29.95
(does not include *Dotwriter* or *VisiCalc*)

DOWNLOADABLE FONTS \$59.95

We have dozens of high-resolution, downloadable fonts for the **Radio Shack DMP 2100P** and the **Epson LQ-1500**. They include italics, cursive, headline, and other fancy typefaces. Each font disk includes programs to perform the download, and sample files to print them for you.

The print quality of these fonts must be seen to be believed. **ALLWRITE** can load these fonts "on the fly" and give you right-justified, proportional printing. If you do not have **ALLWRITE**, you can pre-load a font and use it with any software, including **BASIC** (right-justification is only possible with **ALLWRITE**, however).

Each disk contains at least eleven fonts and supporting programs. The disks cost \$59.95 each, and we

offer substantial discounts to **ALLWRITE** owners. Please call or write to us for print samples, further information and pricing. Due to the specialized nature of this product, we recommend that you see the samples before ordering. Disk formats are available for TRS-80 I, III, 4, and MS-DOS. **ALLWRITE** is available only for TRS-80.

Information on these products is not available at our toll-free answering service, so please call or write to our Technical Support group for details:

(818) 764-3131

PROSOFT

Box 560, No. Hollywood, CA 91603

Please add \$3.00 for shipping. Calif. residents add sales tax. We accept M/C, VISA, checks and C.O.D.

The left bracket, [, replaces the up arrow used by Radio Shack to indicate exponentiation on our printouts. When entering programs published in *80 Micro*, you should make this change.

80 formats its program listings to run 64-characters wide, the way they look on your video screen. This accounts for the occasional wrap-around you will notice in our program listings. Don't let it throw you, particularly when entering assembly listings.

Article submissions from our readers are welcomed and encouraged. Inquiries should be addressed to: Submissions Editor, 80 Pine Street, Peterborough, NH 03458. Include an SASE for a copy of "How to Write for *80 Micro*." Payment for accepted articles is made at a rate of approximately \$50 per printed page; all rights are purchased.

*TRS-80, Scripsit, and TRSDOS are trademarks of Radio Shack, a division of Tandy Corp.

80 Micro (ISSN-0744-7868) is published monthly by CW Communications/Peterborough Inc., 80 Pine St., Peterborough, NH, 03458. Phone: 603-924-9471. Second class postage paid at Peterborough, NH, and additional mailing offices. (Canadian second class mail registration number 9563.) Subscription rates in U.S. are \$24.97 for one year, \$38 for two years, and \$53 for three years. In Canada and Mexico \$27.97—one year only. U.S. funds drawn on a U.S. bank. Nationally distributed by International Circulation Distributors. Foreign subscriptions (surface mail), \$44.97—one year only. U.S. funds drawn on a U.S. bank. Foreign subscriptions (air mail) please inquire. In South Africa contact *80 Micro* P.O. Box 782815, Sandton, South Africa 2146. All subscription correspondence should be addressed to *80 Micro*, Subscription Department, P.O. Box 981, Farmingdale, NY 11737. Please include your address label with any correspondence. LOAD 80

Load 80 gathers together selected programs from this issue of *80 Micro* and puts them on a magnetic medium for your convenience. It is available on tape or disk, and runs on the Models, I, III, and 4.

Load 80 programs are ready to run, and can save you hours of time typing in and debugging listings. Load 80 also gives you access to Assembly-language programs if you don't have an editor/assembler. And, it helps you build a substantial software library.

Using Load 80 is simple. If you own a tape system, load the Load 80 tape as per the instructions provided. If you own a Model I or III disk system, you boot the

Load 80 disk and transfer the files to a TRSDOS system disk according to simple on-screen directions. If you own a Model 4, copy the Model 4 programs from the Load 80 disk to your TRSDOS 6.X disk using the COPY command.

Not all programs will run on your system. Some Model III programs, for instance, will run on the Model 4 in the Model III mode, but not in the Model 4 mode. You should check the system requirements box that accompanies the article to find out what system configuration individual programs require.

If you have any questions about the programs, call Keith Johnson at 603-924-9471. Yearly subscriptions to Load 80 are \$199.97 for disk, or \$99.97 for cassette. Individual loaders are available on disk for \$21.47 or on cassette for \$11.47, including postage. To place a subscription order, or to ask questions about your subscription, please call us toll free at 1-800-343-0728 between 9 a.m. and 5 p.m. Or, you can write to Load 80, 80 Pine St., Peterborough, NH 03458.

NEW! TANDY 1000 HD WITH TEN MEGABYTES... FOR ONLY \$1999!

A hard disk business computer for the same price as an IBM PC without a hard disk.

Tandy . . . Clearly Superior™

Now you can get a high-capacity business computer at a lower price than you ever dreamed. The new Tandy 1000 HD (25-1001) comes with a built-in ten-megabyte hard disk drive. That's 10 million characters of fast-access storage for large data base processing, inventory control, accounting and payroll—any of the big jobs!

Best of all, the Tandy 1000 HD is only \$1999. An IBM PC *without* a hard disk is \$1999*. And with a PC, you

still have to pay for all the "extra" adapters that come standard on the Tandy 1000. Pick the 1000 HD and you've got a superior system—for much less than you'd pay for a comparable IBM PC system. Plus, you also get multi-function DeskMate™ software at no additional charge!

Stop by your local Radio Shack Computer Center today and see the Tandy 1000 HD, as well as the

original Tandy 1000 (25-1000), now at the new low price of \$999. That's \$200 less than last year's price. Step up to the best for less. Tandy is Clearly Superior!

Available at over 1200
Radio Shack Computer Centers and at
participating Radio Shack stores and dealers.

Word Processors Don't Improve Writing

If you read the IBM PC magazines, you might have seen the Leading Edge Word Processor ad that features a picture of Abraham Lincoln and the opening lines to the Gettysburg Address. The point of the ad is never entirely clear, but along the way Leading Edge marvels at how "the great ones" were able to "record huge hunks of Truth" with nothing more than "primitive" scraps of paper.

"The amazing thing is that these monumental processors of words, did it without the benefit of monumental help," Leading Edge says with open-eyed wonder. That "monumental help" turns out to be (surprise!) Leading Edge's word processor.

Never mind that the ad includes several examples of incorrect punctuation, including the renegade comma in the sentence quoted above. You don't have to worry about such trifles when you're talking about huge hunks of Truth. I'm not as bothered by the sloppy writing as I am by the sloppy thinking, the notion that word processors somehow liberate creativity that heretofore could only be sucked laboriously from the well of imagination with a rusty old hand pump.

Personally, I don't find comfort in the thought of Lincoln using a word processor. I have an image of Abe on the eve of his Gettysburg appearance discussing matters with an aide:

Aide: Is your address done yet, sir?

Lincoln: Nah. I'll just bang it out on my 100 on the way there, and read it from the LCD.

Aide: But sir, we were hoping we could merge the file with our mailing list, and send out personalized copies to the press.

Once Lincoln did generate (as opposed to "write") the speech, he probably would have edited it to read something like "Eighty-seven years ago, our ancestors started this nation with the idea that everybody should be free and that we're all the same." How could he resist all those advanced editing capabilities?

The Leading Edge ad perpetuates the myth that word processors improve writing. Buy this software and you, too, can express yourself as Abe did. Well, that's not true. Good writing comes from the marriage of insight and articulation;

it's the ability to see the world with new eyes and share your vision with others. A word processor will not help. If you have nothing to say, all the software will do is let you say it with justified type and automatic footers.

In fact, I'll go one step further: Word processors can in some cases be counterproductive. They can break down healthy patterns, encourage sloppiness and lassitude, and turn the rough, unpredictable landscape of the mind into a suburb of seamless lawns and climate-controlled shopping malls.

I want to emphasize "in some cases." I won't argue that word processors are terrific for journalists, hack writers, white-collar workers, and secretaries, for whom time and volume is important.

I speak more for the craftspeople who recognize that while content precedes form, form can give shape, color, and texture to content, much as a climate stamps those who live in it.

This is why many writers are almost obsessive about the tools with which they work. The wrong size paper, a pen that feels funny, a different chair—they can stop a writer dead in his tracks.

I've noticed a change in my own writing over the last several years. Once upon a time, when all I used was a typewriter or notebook, I would spend days writing a piece in my head before I committed it to paper. When I finally sat down at my desk, I knew exactly what I wanted to say and how I wanted to say

it. The result was usually quick, simple prose set down in a single draft.

As I've come to use a word processor almost exclusively, the discipline of that pattern has slowly dissipated. I find myself approaching a writing task with hardly an idea of what I'm going to say, and not much concern about it. Why should I worry? If I don't like how these little pixels are arranged, I can just turn them off and light up another string, until I find a combination that suits me.

The result is often a partly conceived or vaguely expressed idea, an idea that I might have discarded if I'd first exercised it in my mind.

As I struggle to figure out what I'm going to say, I end up with a lot of time on my hands, time that invites excessive dawdling. So I occupy myself with the trivial tasks of writing—correcting typos, replacing words with ones that seem just a little bit better, inserting paragraph marks, and the like. I can make believe I'm working when in fact I've shut my brain off, like a would-be musician who spends all his time tuning his guitar instead of playing it.

Linger over your writing has another unhealthy side effect—it encourages excessive polishing. I can spend so much time looking for the perfect word, the perfect phrasing, the perfect cadence that I drain the life from my prose; it's as smooth and hard as ice, but also as cold.

So what am I going to do about it? Alas, like so many others, I'm hooked on word processors like I'm hooked on electric lights and a car (I haven't surrendered my wood stove yet). I know the spiritual benefits of living closer to the primal technologies that nature bequeaths us, but am seduced by the material gains granted by the grosser technologies of modern life.

I have pledged, however, to return my Hermes 3000 manual typewriter to my desk at home. By day, I'll be a high-tech word-cruncher; by night, a sensualist indulging in the rich pleasures of the language. I'll do so having learned this lesson: No matter how efficient and productive a word processor can be, it will never inspire a thought, or capture a feeling, or express an idea. I'll have to handle those jobs myself. ■

NEW!

Circle 91 on Reader Service card

These were printed by DOTWRITER on an Epson MX 80.

See What You Can Do With DOTWRITER 4.0!

Now available for the Model 4, too!

★★★★★
80 MICRO
June, 1985

DOTWRITER lets you create spectacular, eye-catching letterheads, catalogs, invitations, or even books. It is just what you need to turn your dot-matrix printer into a versatile typesetting machine. And it's available for the Model 4 (yes, in native mode) as well as for the Models I and III.

What is DOTWRITER?

DOTWRITER uses the "bit-image graphics" of your printer to produce the kinds of stunning results shown inside the box. It is a full-function text printing program, so you can inter-mix different character sets, do centering, paragraphs, pagination, magnification, draw horizontal and vertical lines, reversals (white on black), and even print right-justified proportional text.

DOTWRITER includes the printing program, complete documentation, and fourteen useful sets of typefaces (60 to 90 characters in each set). We will include the 160 page Letterset Reference Summary at half-price (\$10.00) with your order.

To use DOTWRITER, just write your text with any popular TRS-80 Word Processor, add the necessary format-

ting commands, and DOTWRITER will do the rest.

35 more disks are available separately. Each has 3-12 complete typefaces (60-95 characters in each set).

These disks cost less than \$25 each, and may be purchased at any time.

If you want to create your own logos, modify our typefaces, or even design entirely new typefaces, then you will also want to order the "Letterset Design System" (LDS). We offer LDS at half-price when you order it along with DOTWRITER. LDS operates in Model III mode on the Model 4.

Versions are available for Epson MX-80 with Graftrax, MX-100 with Graftrax-Plus, RX-80, FX-80, C. ITOH 8510/1550, Microline 84/92/93; Radio Shack's DMP series 200-2100, CGP-220 & Gemini 10X, 15X. Please specify printer and computer!

Your print samples were done on an Epson. Sizes vary on other printers. Some of the samples shown here are taken from the additional Letterset disks.

Two disk drives and at least 48K of memory are required. LDS is not available in native Model 4 mode.

Send for free print samples! We've only shown you a few of the 230 DOTWRITER fonts. If you want the best in graphics printing, we suggest you order DOTWRITER today, toll-free.

Please specify printer and computer when ordering.

ALLWRITE!

The Premier Word Processor for Your TRS-80 Model I, III, or 4

We are proud to offer you the one Word Processor that will satisfy all your writing needs: ALLWRITE. It sets new standards for text editing and printing, and will give new life to your TRS-80. Let us tell you why...

In an attempt to push the public into expensive 16-bit computers, many manufacturers have been saying that the TRS-80 is obsolete. The truth is that the software, not the hardware, makes the difference. And the best word processor of all is now available only on the humble TRS-80, not on those expensive 16-bit machines!

ALLWRITE is based on the proven methods that made NEWSSCRIPT the most popular independently produced TRS-80 word processor, but it also has the speed and new features our customers have asked us for. ALLWRITE will save you time and let you produce the highest-quality, most professional-looking letters, term papers, and reports available on a micro-computer.

Allwrite Can Save You Time!

Reads a 25,000 character file (10 printed pages) from disk in SIX SECONDS...does a global search-and-replace in FOUR SECONDS...outruns even the fastest popular micro-printer.

ALLWRITE'S Screen Handling Makes Word Processing Easier Than Ever

Change text width at any time; wide lines shift left and right as you type. ALLWRITE preserves double-blanks between sentences, and displays the entire screen for text, and displays a complete Status Screen at the touch of a key. Scroll by line, partial screen, full screen, to top or end of file, or to any marked point. Move cursor by character, word, tab, line, or screen.

You can set and change on-screen tabs and store them on disk. The print-time tabbing features are incredibly versatile: they allow left, right, and centered tabs, and even line up your decimal points.

ALLWRITE shows you where you forgot to turn off underlining, boldface, italics, or double-width. Special on-screen Preview feature shows page breaks and page layouts...including underlining and boldface...without annoying blinking or screen flicker. In "Summary" mode, ALLWRITE quickly flags formatting errors without

These were printed by ALLWRITE; shown 20% actual size.

wasting time printing all the text. These standard features make document preparation faster and easier than ever!

State-Of-The-Art File Handling

There is no upper-limit on document size with ALLWRITE, because it chains files backwards as well as forwards, even across diskettes. Switch from one chained file to another in less than six seconds by pressing two keys. Select portions of other files for inclusion at print time...great for stock paragraphs.

ALLWRITE salvages text from bad disks! If a sector goes bad, you won't lose the entire file, because it will skip bad sectors, read the rest of the file,

TAKES FULL ADVANTAGE OF YOUR MODEL 4.

The model 4 version of ALLWRITE uses the entire 80-by-24 screen. On a 64K machine, you can edit over 34,000 characters of text. On a 128K machine, you can edit **THREE FILES AT THE SAME TIME!** The second and third files can be over 32,600 characters each, for a total of **almost 100,000 characters** of text in memory.

and then show you where the lost text belongs. This advanced error recovery turns a disaster into a feeling of profound relief.

User-Definable Soft Keys Reduce Typing Time

You can store 22 phrases or commands at a time into "soft-keys," then press just two keys to retrieve them. This makes frequently-used phrases and formatting controls a snap to use. You can store these definitions on disk and build a library of hundreds of pre-programmed keys to fit every one of your applications.

Our specially-designed templates fit right on your keyboard to let you see your settings at all times. Each template is also a Reference ("Cue") Card, so it is always right in front of you when you need it, without using up valuable screen space.

ALLWRITE Is Easy To Learn

ALLWRITE's commands and control keys are easy to remember because they use the first letters of common English words: 'CE' stands for 'Center,' 'Search' and 'Replace' do just that, and so forth. The on-line HELP menu offers over fifty screens of topics.

NEWSSCRIPT's documentation was acclaimed in every review, and ALLWRITE's 350-page book is even better. Portions of it are designed for beginners, with every feature clearly explained in step-by-step tutorial style. Since you won't always be a beginner, other parts of the book offer advanced topics. There is a cross-reference summary chapter, a 14-page comprehensive index, and a detailed Table of Contents. We've been developing computer programs and manuals for over 20 years, and understand the importance of good documentation.

To make installation easy, we include Tiny DOSPLUS for the Models 1 and III, and special, pre-tailored versions of both TRSDOS 6.2 and DOS-PLUS IV for the Model 4, all at no extra charge. The Model 1 and III versions work equally well with all major DOS's.

PROSOFT'S On-Going Customer Support

Perhaps the best reason of all for having ALLWRITE is the continuing support we offer you: friendly, expert, direct support that is unsurpassed in the micro-computer industry. There is no time limit to our support: if you are our customer and you need help, just call or write. We give free updates for 90 days, and charge little or nothing for minor updates thereafter.

Customer Comments

"This is the best software package I have ever received...superb, easy to use, fast, and has more features than the business word-processor at the office." (E.R.L.)

"ALLWRITE is a professional system that sets a new standard in word processing. It's powerful and easy to learn and use."

80 MICRO, Nov., 1984

"Your company and products have to be one of the strongest factors I can think of for keeping me with the TRS-80!" (J.R.H.)

"NEWSSCRIPT is the Cadillac of word processors. ALLWRITE is the Mercedes Benz!!" (B.E.)

"...a very readable manual." (D.S.)

BENEFITS OF OWNING

★ ★ ALLWRITE ★ ★

If Word Processing is important to you, PROSOFT's ALLWRITE is the best choice you can make. The clean, professional appearance it adds to your letters and reports will make an excellent impression on people. We will be happy to send you free print samples so that you can see for yourself how good ALLWRITE will make you look.

You probably know that quality word processors for CP/M and the IBM-PC sell for \$300-500, and they don't have ALLWRITE's capabilities or speed...or PROSOFT's proven, on-going support. Now, for a fraction of the cost of a new computer, you can have the most complete word processor of all. And you won't have the headaches of starting all over again with a new, different computer.

Note to college students: with its Footnote, Table of Contents and Index features, ALLWRITE is ideal for your reports and Term papers.

Circle 30 on Reader Service card.

HUNDREDS OF USEFUL CAPABILITIES

ALLWRITE comes with just about every useful word processing feature...standard. Here are some highlights: excellent right-justified proportional printing on most printers having that ability; powerful Form Letter and Mailing Label preparation; instant counts of words, characters, lines, changes; block Move, Copy, Delete, Putfile, Getfile, and List; delete by character, word, line, sentence, paragraph, or block; insert and one-key insert; great RS-232 printer support; accepts all 256 ASCII codes from keyboard; intermix pitches on same line (printer-dependent); 1.5 line spacing, 6, 7, 8, 12 lines per inch (printer-dependent); does multiple-columns on all printers; perfect alignment of hanging indents; variables, logic statements, conditional printing; wildcard Directories; integrated with Electric Webster and DOTWRITER for Models I, III, and 4 (these are sold separately); "Legal" line numbering; paragraph, list, and figure numbering; supports most popular printers (all "printer drivers" included); compatible with high-memory drivers; fully explains all DOS and ALLWRITE error messages; wildcard search-replace; tabs, search-replace, other settings remembered across files; word reversal; up to nine levels of boldface; flexible page titles; footnotes at bottom of page or end of document; Table of Contents and Index generation; and PROSOFT's unmatched text formatting and printing capabilities.

Attention NEWSSCRIPT Owners

You can trade in your copy of NEWSSCRIPT at very substantial savings. Please call our technical line for details.

How To Order

You can order by phone or mail. For quickest delivery, call our Technical Support line. Please specify your TRS-80 model (I, III, or 4, 48K, at least two disk drives), and your printer(s). Our price includes normal shipping in the U.S. and Canada. The sooner you order, the sooner you will begin to benefit from the ALLWRITE! Word Processor.

Tax Relief

Your March issue contained the only comprehensive article I've found on home computer income tax deductions. "Reasonable Deductions" by Lake, Golden, and Lett is clear and concise, and the examples are excellent.

Q.C. Stanberry, Jr.
Houston, TX

Let the Games Continue

I think you're making a big mistake in discontinuing your annual games issue. You say games are now on the bottom of your readers' want list. What about readers like me who looked forward to the games issue? Are we going to be left out in the cold? I used to think your magazine was great because you covered all areas of computing: business, games, hobby, and so forth. But now it seems you're focusing only on business.

Randy Landgraf
McMinnville, OR

We're not dropping games altogether; we'll continue to publish them from time to time.

—Eds.

Line Item

In the February 1985 Basic Takes (p. 108), Richard Ramella makes the misleading statement, "...lower line numbers save memory...." Actually, Basic stores a tokenized line with a 2-byte hexadecimal line number, regardless of that line number's size. It is only those relatively infrequent GOTO and GOSUB lines that store the following number in a multibyte ASCII format. Therefore, if a program doesn't contain any GOTO or GOSUB lines, re-

numbering will not save space. Also, newer GW-type Basics store even GOTO and GOSUB lines in a tokenized 2-byte format, so you can't reduce memory requirements due to renumbering.

Frank Vanslager
San Jose, CA

I appreciate Mr. Vanslager's correction. The Model 4 and Tandy 1000 Basics don't give the results I indicated. Readers can use a simple test to determine if their computer can conserve memory by renumbering Basic listings. Type in:

```
50000 GOTO 50010
50010 END
```

Run the program, then type in your computer's command for displaying available memory, either PRINT FRE(0) or PRINT MEM, and press the enter key. Write down the number that appears. Erase the listing and type in and run the following program:

```
1 GOTO 2
2 END
```

Once more, display available memory; if the first number is higher than the

80 Micro's BBS is open 24 hours a day. It offers programs you can up and download, special-interest groups, and a classified section. You can reach the board at 603-924-6985; UART settings are 300/1200 baud, 7-bit words, 1 stop bit, and even parity.

second, you can save memory by using lower line numbers.

If memory isn't a consideration, don't bother to renumber. But many users are still working with only 16K of memory. Sometimes they need, for example, to clear a few more bytes for strings, and this is a way to wrench that memory out of a long listing.

Richard Ramella
Chico, CA

Tandy Si

After reading the May 1985 Input page, I felt the desire to say a good word for Tandy and the Radio Shack people. Just over a year ago, I acquired a Model 4. I had never had my hands on any computer of any make or model. The Radio Shack staff struggled through my learning period with me, and I have nothing but praise for them. After all, why should a 74-year-old man be starting out to learn to operate a microcomputer?

Now I'm using a payroll package, Scripsit, VisiCalc, and General Ledger. As far as I'm concerned, the Model 4 is a good piece of hardware, and I have been pleased with the DWP-210 printer that I bought. Some day I may outgrow it.

R.T. Vaughn
Nashville, TN

CP/M No

You can find myriad applications programs that run under MS-DOS, TRS-DOS, and PC-DOS for business, education, math, communications, aviation, medicine, stamp collecting, and so on. Also, under those operating systems, which are easy to learn, remember, and use, you can develop and write programs in Basic, Pascal, C, Fortran, Cobol, Forth, and Assembly language.

So what is all this hype and hoopla about CP/M being now available for certain computers? Public domain programs? They lack documentation and are therefore of limited use. If computing is to go forward, we nonprofessionals need simpler systems, not expanded availability of a difficult-to-learn, complicated operating system like CP/M. One can hardly go forward by taking a backward step.

E.A. Morris
Sparta, NJ

Check these features:

Talker 2.0 and Talker 4.0 software:

- ✓ Unlimited translation of English text to clear speech.
- ✓ Powerful video or keyboard echo can be switched on or off at any time.
- ✓ Can be used in BASIC with 2 new commands: PRINT* "I can talk" speaks any expression. PRINT! "Hello" speaks and prints on screen.
- ✓ Reads numbers up to 999 trillion.
- ✓ Speaks many abbreviations, such as Mrs., Mr., lb., oz., Co., etc.
- Walks the dog.
- ✓ Many control codes to tailor the system to your wishes. (Pitch, speed, etc.)
- ✓ Only 6¼K long.
- ✓ Talker relocates itself into available high memory. Compatible with any DOS (not CPM).

The VS-100 hardware:

- ✓ Same performance as very expensive units.
- ✓ Super efficient: About 50 bytes per sentence.
- ✓ Handsome speaker module included.
- ✓ Detailed 48 page manual.
- ✓ Ready to plug in and talk right away.
- ✓ Uses the famous Votrax SC-01 with 4 pitch levels and automatic inflection.
- ✓ Built in audio amplifier with volume control.

See the detailed review in 80-Micro December 1984.

The VS-100: You've **never** had so much **fun** with your TRS-80

"Doctor SIGMUND"
will amaze you!

See Artificial Intelligence at work!

If you want to show off your computer, run "Doctor SIGMUND" and see their expressions as your TRS-80 has an intelligent conversation with you. If you have a VS-100 voice synthesizer, Sigmund actually talks back to you. Even YOU will be impressed. \$29.95
Doctor SIGMUND, for Models I, III and 4 (48K required); available on disk only

SPEECH

fun
simple
powerful

with the vs-100 voice synthesizer

The VS-100 system. (Model I shown)

\$ **69.95**

Includes:
- VS-100 synthesizer
- Speaker
- Power supply
- Manual

Specify Model I, III, 4 or 4P.

Model 4P needs short 50 pin extension cable 14.95

TEXT-TO-SPEECH SOFTWARE

- **Talker 2.0** for Models I and III
On disk only..... 29.95
- **Talker 4.0** for Model 4. Includes Talker 2.0 for Model III mode. On disk only..... 39.95
- Text-to-Speech for tape users..... 19.95

Small Print: ● Model I: unit plugs into keyboard or expansion interface 40 pin bus. ● Model III, 4, 4P: unit plugs into 50-pin I/O bus. Model III VS-100 works with Model III, 4, 4P. Use our "Y-cables" (see next page) if your bus is already used.

Q•My students use cassette-based Scripsit modified to run at high baud rate. This speeds up operation and hasn't caused any problems with reliability. I use disk Scripsit 3.2 and would like to be able to load students' high-baud tapes or write to tapes they could use. What modification makes the program set the cassette recorder to high? (K. Edward Renner, Dalhousie University, Halifax, NS)

A•Here's a patch that modifies Scripsit 3.2 for high baud rate:

```
PATCH SCRIPSIT/CMD (ADD = 5308,FIND =
AF321142,CHG = AF320000)
```

And here's the same patch for readers using Scripsit 1.0:

```
PATCH SCRIPSIT/CMD (ADD = 5222,FIND =
AF321142,CHG = AF320000).
```

Q•I have a 128K Model 4P and a dual-drive 48K Model III with Radio Shack's double-density board. I have several questions about software and hardware.

First, I want to install Radio Shack's Scripsit Spelling Dictionary with SuperScripsit, but I'm missing the Install program. Can you describe how to install the dictionary?

Second, I've transferred Radio Shack's Haunted House from tape to disk, but the program comes in two parts. At the end of part 1, the message "Ready cassette-hit enter when ready" appears. I've located the message using Debug, and I want to change it to read "Loading second part-standby" and then call the second file and have it start execution. Although I appended part 2 to part 1, I'm unable to start executing the second part without going to DOS and typing in its filename. Any ideas?

My third question deals with Radio Shack's MicroChess program. I want to transfer it to disk but haven't succeeded, even with these utilities: COPY2/CMD, Tapedisk/CMD, Transfer/CMD, Whatzit/CMD, T2D2/CMD, Super Utility 2.2Z, and TRSDOS 2.7DD's Tape command. Can it be done?

Fourth, can I use my Model I disk drives and a four-connector disk drive cable to make my 4P a four-drive system? My Model I drive zero has a power supply that operates drives zero and 1; would I need any additional equipment?

Finally, I'm thinking about getting an Aerocomp 30-megabyte hard disk drive to use as my primary drive, but I'd like to format and run the following operating systems on it: TRSDOS 6.2, LDOS 5.1.4, and Montezuma CP/M 2.2. I have TRSDOS 6.2's and LDOS 5.1.4's hard disk initialization routines. Can you describe the procedure for partitioning the hard drive for these systems? Do I need Montezuma Micro's hard disk drive support package to do it? (William Kirksey, Corpus Christi, TX)

A•You're using SuperScripsit in Model III mode. Before you install the dictionary, back up your SuperScripsit and Scripsit Dictionary disks. You should have a Proofread disk; back it up, too. Boot up the SuperScripsit disk in drive zero; at TRSDOS Ready, remove the disk and put the Proofread disk in drive zero. Put the Dictionary disk in drive 1. Type in KILL SPEDIT:1 and KILL CHECK/CMD:1, then type in COPY PRDOF/CTL TO PRDOF/CTL:1. That's all the Install program does: Install the Proofread Control file on the dictionary disk after making some space for it.

As for Haunted House, I don't believe you can do what you want. The second part of Haunted House is supposed to run at a lower location in memory than where you have it. Moving it higher, as

you've done, makes some of the machine-language jumps incorrect. You need to add a short machine-language program to the end of part 2 that moves it to its proper location, then jumps to part 2's execution address. And you need to modify part 1 so that it automatically jumps to this machine-language routine when part 1 finishes.

I don't know about MicroChess—does anyone know how to get it to disk?

About those extra drives, I've finally discovered why it's so hard to put external drives on the 4P: The pins for those two drives aren't even connected to anything on the controller board. The Q2 and Q3 outputs from the floppy disk controller chip are left unconnected. To add external drives, you must go into your computer and hard-wire the outputs from Q2 and Q3 to an inverter chip and then onto the staking pins that your drive cable uses. You also need a new drive cable. You can't use the old Model I cables because the 4P uses a double row of 34 staking pins on the drive controller board to connect to the disk drive cable instead of an edgcard connection.

To use the hard disk drive with Montezuma Micro's CP/M you will, of course, need their hard disk support package. The operating system manuals describe the procedure for partitioning the hard drive. Basically, you lie to the operating systems about how much memory is available on the hard drive and where each system is supposed to find its section. The operating systems won't be able to share sections. CP/M won't recognize TRSDOS's sector/platter partitioning and vice versa, so each system will have access to only a portion of the hard drive's surface.

Q•My questions concern the Tandy 1000's TEAC disk drives. As configured, they use the TEAC 54B double-density, 40-track, nine-sectors-per-track format. I recently bought two TEAC 55F quad-density 80-track drives and would like to install them in my Tandy 1000. TEAC gave me the following DIP (dual in-line package) shunt configuration: DS1, HM, IU, and SM on both drives, with drive A having the termination.

After trying this configuration and several other combinations, I still can't get my system to boot up. I receive either

Newclock-80 \$69.95

The right time at the right price! Keep the time and date with quartz accuracy, even when your computer is off. The backup lithium battery (included) will last for over 2 years. Software on tape or disk, please specify. Use "TIMESET" once to set the clock. Use "SETCLK" to set your computer's internal clock (at power up) or use "TSTRING" so that the "TIMES" function reads the Newclock. Connection: Model I: plugs into the keyboard or expansion interface. Model III: plugs into the 50-pin I/O bus. Compatible with all operating systems.

Printswitch \$59.00

Do you have 2 printers? Get a Printswitch. Stop plugging and unplugging those printer cables. With the Printswitch, you can have 2 printers connected to your computer and you can select either one at the flick of a switch. Works with any printer, plotter, or device that uses the parallel printer port. Simply plug the 14 inch Printswitch cable into your computer, and plug your existing printer cables into the Printswitch. This is the nicest unit on the market. Superior quality board with gold plated edge connectors. For Models I,III, 4 and 4P.

Alpha Joystick \$27.95

When it's time for fun, don't be without your Alpha Joystick. Do you know that most action games are Joystick compatible? Stop pounding on your keyboard and enjoy real arcade control. The joystick can also be used with BASIC programs; simply do J=INP(0) to read the joystick position (8 directions and fire button). Model I: plugs into keyboard or expansion interface. Model III, 4 and 4P: plugs into 50-pin I/O bus. The Alpha Joystick comes fully assembled and tested, ready to plug in and enjoy. (Specify Model I, or Model III,4).

Interfacer-80 \$159.00

Low cost input and output device. The outputs consist of 8 relays (rated 2 Amp @125V), easily controlled using "OUT" commands. For example, OUT 0,0 turns all the relays off. Eight LED's show the states of the relays. The 8 inputs are optically isolated, so it's safe and easy to connect external devices (switches, sensors, thermostats, etc.). Simple "INP" commands read the inputs. Connection: Mod I: 40 pin bus. Mod III, 4, 4P: requires 50-pin I/O bus converter (\$39.95), plugs into 50-pin I/O bus. Comes complete with power supply, cable, and detailed manual (Up to 8 interfacers can be connected to your TRS-80 using our Y- cables).

Analog-80 \$139.00

8 channel 8 bit Analog to Digital converter. Your TRS-80 can read voltages, temperatures, pressures, light levels, etc. • Input range: 0 to 5.1 Volts. • Resolution: 20mV. • Conversion time: 120 microseconds. In BASIC, you can take up to 100 readings per second. • Port address: selectable. Up to 8 Analog-80's can be connected to your TRS-80 for a total of 64 channels! Connection: Model I: 40 pin I/O bus. Model III, 4, 4P: requires 50-pin bus adapter (\$39.95). Comes complete with power supply, cable, and manual.

Special Cables

Disk drive extender cable (8")...C160:\$9.95

Y-Cable for Mod I bus (40 pin): • X2-40...\$29 • X3-40...\$44 • X4...\$59 • X5...\$74
Y-Cable for Mod 3 & 4 bus (50-pin): • X2-50...\$34 • X3-50...\$49 • X4-50...\$64
Disk drive cable (34 pin): • 2-drive...C162:\$32 • 4-drive...C163:\$45
Extension cable, 4 foot: • For printer and drive (34-pin)...C165:\$22
• For Mod I bus (40-pin)...C167:\$24 • For Mod 3 & 4 bus (50-pin)...C169:\$28
Keyboard to E/I (40-pin, 8")...C161:\$21 If this is confusing, send for our Cable Flyer.
Our cables are made with high quality gold plated connectors to ensure utmost reliability

NO RISK

We know that ordering by mail can sometimes be a hassle, but with Alpha, you are fully protected

- 1) Our 15 day money back guarantee protects you from disappointment.
- 2) All our products are tested on a TRS-80 and warranted for 90 days (parts & labor)
- 3) We ship 90% of our orders within 24 hours
- 4) We are committed to help you

Green Screen \$12.50

Do your eyes a favor, put on a green screen. Tens of thousands are in use for a good reason: they work. Contrast is enhanced and eye fatigue is greatly reduced. Our green screen is curved; it fits right on the face of the tube. (Fits Models I,II,III,4,12,16)

a disk boot error message or a message to insert the disk. I've tried both MS-DOS 2.11 and PC-DOS 3.0, the latter supposedly supporting quad-density format. Will the 1000's disk controller recognize the higher density drive? If not, can you suggest a suitable replacement? Without technical documentation for the 1000, I can't proceed with this upgrade. (Donald J. Mangold, Verona, NY)

A: Are you trying to boot an 80-track disk? If not, that's probably your problem. Eighty-track units have twice as many tracks in the same amount of space as 40-track drives. With a 40-track disk in an 80-track drive, the drive is still reading the 40-track disk's first track when it moves to the second track. To make this work you must force the 80-track drive to increment two tracks instead of one. Unfortunately you can't do this with a hardware modification. The only solution is temporarily to put one of the 40-track drives back online as drive zero and to format and make a system back-up to the 80-track unit using the DOS SYSGEN command (see the manual for details). I believe you're supposed to set one drive to DSO and the other to DSI. Double-check this with your technician as it's very important. If I'm right you have both 80-track drives configured as drive 1.

By the way, you can get Tandy 1000 technical manuals from Radio Shack's National Parts division (900 E. Northside Dr., Fort Worth, TX 76102, 817-870-5662.)

Q: Can you tell me who makes the CPU for Radio Shack's DMP-120 printer? The service manual lists the CPU as manufacturer's part number 2420NPEP159 and the label on the CPU reads "TEC 8403PX EP-159 Japan 7802068." When I asked Radio Shack's Consumer Service department about it, they said they couldn't give the manufacturer's name because it's a trade secret!

I opened the printer to repair a bad print head, and after that I started studying the CPU with a scope. I am slowly figuring it out but could go faster and better with a specifications sheet.

After less than an hour's use a print-hammer coil and its transistor went out. The coil, which normally has a resistance of 17 ohms, had heated enough to melt its plastic form and shorted to 1 ohm. What could cause such a thing in a new printer? (Jack Stuntz, Ft. Collins, CO)

A: TEC stands for Tokyo Electronics Co. They're at 222 Kearny St., San Francisco, CA 94108; they make the DMP-120's CPU.

I can attribute such a printer failure only to a defective part. I hope you made

Radio Shack do the repair, as the failure was well within the 90-day warranty period for defective parts or poor workmanship.

Q: I recently bought a 128K Model 4. When I load TRSDOS 6.X into RAM, I have only about 28K left. My old Model 1 left me with 38K of RAM. I need at least 38K to run my programs. Do you know of a Model 4 operating system that will leave me enough working room? (M. Muccitolo, Floral Park, NY)

A: MULTIDOS or DOSPLUS gives you about that much room, with supply utilities that let you compress your programs to release more RAM for data and variable storage. Have you considered breaking up your program and using the Common and Chain commands to switch back and forth? That's what those commands are for.

Q: Several years ago, while in Japan, I bought a Model 1 from an authorized Tandy dealer. The equipment worked fine until recently, when drive zero started making a knocking sound. I took the bad drive to the local Radio Shack for repairs.

About five weeks later, when I asked about the drive, I was told the Radio Shack store wouldn't attempt to repair it without the proper schematics and repair manual, which were unavailable since the unit was manufactured in Japan. A label on the back of the drive reads, "Cat. No. 2601160A, Custom Mfd. in Japan for Tandy Radio Shack - AC 10V +/- 10%, 50/60 Hz." Do you know where I can get manuals and schematics for my equipment, or can you suggest another solution? (Jon C. Schultz, Sandusky, OH)

A: The only suggestion I can make is that you write directly to Tandy's Japanese division and ask for a service manual. Can anyone else help?

Q: I use a Model III with a DWP-410 printer. SuperScripts's user print codes are causing trouble with proportional spacing and right-justified margin. Codes for characters such as 1/2, 1/4, and @ make the printout line spill past the right margin. I double-checked the manual to make sure I was allowing the correct amount of space. What's wrong?

Also, when using Profile III Plus, I occasionally get an "I/O end of file" error when printing labels. This happens with one file only.

Finally, I'm considering getting a 10-megabyte hard disk drive to use with Profile III Plus. One file covers about 20 floppy disks and it would be best, I think, to keep this all together. Can I transfer data files to hard disk? Will Profile III

Plus run from hard disk? What problems can I expect? (Carl H. Sturmer, Earlton, NY)

A: This is the first I've heard of such a problem with SuperScripts. Since the prescribed amount of room for your special characters isn't enough, have you tried incrementing the amount until you find the magic number that gives you perfect margins?

You obviously have a bad sector somewhere in that Profile III Plus file that's causing trouble. Try copying the file to a new disk. Or use a simple Basic program that loads each section of the file into memory and writes it to a new file name, displaying the information as it does so. This should help you pinpoint the bad area.

Yes, you can transfer your Profile III Plus files to hard disk. No, the version for standard floppy drives won't work off the hard drive. You have to buy a special hard drive version; it works just like the floppy version except that everything defaults to the hard disk. You shouldn't have many problems once you get used to the new equipment.

Q: As you know, the Model 4P has no cassette interface. I suppose Tandy thought a portable computer user had no business fooling with cassettes. Unfortunately, I use a 4P as my main computer and I certainly do need cassettes. I have a good supply of Model 1 software that I can't use. Do you know where I could get information about building a cassette interface for the 4P? Since the unit already has the Model III ROM on disk, which should include the cassette routines, it should be relatively simple to build such a device. Model 4 mode is unimportant; I'm only interested in loading my old Model 1 software. (Michael Czuhalewski, APO, NY)

A: As yet, I haven't seen anything about a cassette modification for the Model 4P. One bit of warning though: Just because the 4P has a ROM image on disk doesn't necessarily mean the image includes the code for cassette routines. Can anyone help?

Q: I recently bought a kit to expand my Model 4P's memory to 128K. From the advertisement I assumed the kit would have instructions for both the Models 4 and 4P, but it contained instructions only for the Model 4.

I installed the chips in the empty RAM sockets and tried to access the new memory with MEMDISK. However, my computer displayed the message, "Unable to install MEMDISK, requested banks in use." I assume there's more to the upgrade than plugging in the eight 4164 chips. (Greg Denson, Hoover, AL)

A: There's more to it than just plugging in the chips. The Model 4 requires a PAL (programming array logic) chip to use the extra 64K.

The 4P doesn't need a PAL chip, but you must move the board jumper between pin E12 and E13 to pins E11 and E12. That tells the computer that the extra bank of RAM is available. Sounds as if you have something else already using that extra RAM.

After you've moved the jumper, try again. Begin at first base with just your DOS disk booted up: no special drivers, filters, or other programs in memory (the configuration routine disabled). Now try installing Memdisk using memory bank zero. If you get an error, something is wrong with Memdisk; bank zero doesn't use the extra RAM.

If you don't get any errors, turn off the computer and start again. This time choose just memory bank 1. If you again get the error, "Requested banks in use," it's time to trouble-shoot the chips you installed. Are they all oriented correctly, with their notches all pointing in the same direction? Try removing them and reinstalling them in a different order. If Memdisk still fails, you'll have to contact Radio Shack, as something is wrong with the program, the computer, or the chips.

Q: I have a cassette-based Model 1 Level II that I'd like to convert to disk operation. What do I need, where can I get some drives, and what will it cost? Can I do it myself? (*Lawrence Kiefer, St. Ann, MO*)

A: Upgrading requires an expansion interface to provide the disk controller circuitry and extra memory. Unfortunately, Model I expansion interfaces are becoming as scarce as hen's teeth.

The only company I know of still making them is MicroMint (561 Willow Ave., Cedarhurst, NY 11516, 516-374-6793). Micro Data Supplies (22295 Euclid Ave., Euclid, OH 44117, 800-321-3552) used to sell the LNW Model I Expansion Interface, but I don't know if they have any left. If you're handy with electronics, a series of articles starting in the October 1982 *80 Micro* tells you how to build your own.

Once you have the EI, you need to get a disk drive zero. Several companies sell them; check the *80 Micro* ads. Drive zeros differ from other drives in that they contain a terminating resistor pack. This electronically protects the disk drives and floppy disk controller from spurious electronic noise and properly ties the drive cable data lines to ground. Without this terminating pack, you risk ruining the floppy disk or disk drive controller circuits or both.

As a matter of fact, you could try looking in the *Computer Shopper's* classified ads. You might find someone willing to sell a Model I for less than it would cost you to buy an EI and new drives.

If you should get a Radio Shack EI, get Gold Plugs from EAP (P.O. Box 14, Keller, TX 76248, 817-498-4242). These solder onto the edge card connectors of your keyboard and expansion interface, eliminating corrosion that causes disk resets and data reliability problems between the keyboard, EI, and disk drives.

Next, get Aerocomp's Model I double-density board (Redbird Airport, Bldg. 8, P.O. Box 24829, Dallas, TX 75224, 214-339-8324). This doubles your drives' storage capacity and makes it much easier to run complex software. I've used their board in my computer for many years and never had a problem with it. It's also a snap to install.

Considering the cost of these items, however, it might be cheaper to buy a new Model 4 and upgrade it to disk drives instead.

Q: Your answer to Craig L. Cole's question about color expansions for the Model I (*February 1985, p. 18*) surprised me. You said you didn't know of any companies that made color boards for the Model I. The article "The 80 Goes Color" in the May 1983 *80 Micro* (p. 90) describes the construction of a high-resolution color board for the Models I and III. This board sounds made-to-order for Craig Cole. (*Dell M. Garner, Poughkeepsie, NY*)

A: Thanks for the reminder. Craig needs the June 1983 issue also, because the construction article was a two-parter.

Q: Our business college bought a Model II and a 20-megabyte hard disk drive from an individual; both are used but in good shape. Quality Computer Services originally sold the hard drive, but when we tried to register as the new owner, we discovered they were no longer in business. Our problem is that we have no documentation for the hard drive.

Due to an electrical problem, we glitched a portion of the boot, so we're unable to get a ready prompt and are locked out. Do you, or any of your readers, have some information on the Q.C.S. hard drive? One other question: We plan to run CP/M on the Model II and use the MUMPS language and the Fileman data base package. Also, we want to set up the Model II for more than one user. Is there a type of multiplexer we can use for multiple user access via the RS-232 port? Ideally, we'd want all users to be able to log on, but they'd have to

share actual CPU time. One company recommended using a switching multiplexer with CP/M and said we wouldn't need a special operating system such as Xenix. But other companies say multi-user operation on a Model II isn't available without Xenix. Any ideas? (*Greg Casselman, Chillicothe, OH*)

A: Can't help you with the Q.C.S. Hard Drive; can anyone else?

Radio Shack originally designed the Model II as a single-person work station. Multiplexing the CPU to more than one person will slow down the computer somewhat. I haven't seen any field operations using the Model II as you propose, but you can do it. You don't want to use CP/M, though; use MP/M, the multi-user version of CP/M.

You'll have to contact Digital Research about the particulars, but I believe you can easily and simply set up the Model II to accept inputs from the RS-232 ports. This would support three users, one at the keyboard and two via the two RS-232 ports. The disadvantage is that this severely decreases the amount of RAM available to each user. In fact, I think you'll find that each user will have only about 16K to work with.

What might be better would be to get a multiplexer for the hard disk and let separate computers access the hard drive individually.

Q: I bought and installed a Mapper I kit from Omikron for my Model I so I could run CP/M-based programs. I followed their installation instructions, including the capacitor modification (I have the new type CPU), but I still can't run CP/M. The message I get is "DBOS ERR ON A: BAD SECTOR". It's definitely not the drive or disk; I tried three different disk drives; also I got the same result using the master disk. TRSDOS works OK, though.

Since it's my understanding that Omikron is out of business, can you or one of your readers help me solve this problem? (*George Verlinden, Westminster, CA*)

A: Since you can't get even the master disk to boot up, I suspect your master disk is blown. If the problem were hardware, I suspect that even TRSDOS wouldn't work right.

You need a new disk. Omikron is still around; they're just keeping a low profile as they try to recover from Chapter 11 and make good on all the orders they were supposed to send customers. Write to Paul Kelley, 1127 Hearst St., Berkeley, CA 94702, with a description of your problem and you should be able to get a new disk.

Montezuma Micro CP/M®
2.2 version 2.21+
128K RAM
Model 4 or 4P
8-bit Fever

A touch of the keyboard opens a window in your screen for – a Note Pad, an Appointment Calendar, a Calculator, even a Mini Data Base. All yours for just \$49! Need RAM? Monte's Christmas gift to you – 64K and the window, both for \$99!

Once Upon A Time,

Monte Zuma, our Founder, President and King, has always had trouble keeping his desk organized. The Sidekick™ from Borland International would solve the problem, but alas, it was not available for CP/M®. So Monte asked his favorite nephew, the legendary LaMont E. Zuma (distant cousin to Rondo Talbot, a direct descendant of Monte Zuma himself) to work on the problem as best he could during recess at the home. LaMont, a true legend in his own time, really outdid himself this time. A touch of both shift keys halts your application program in its tracks and up pops Monte's Window™ ready to use. What could be simpler? Put an end to the fumbling and pawing around the pile of papers on your desk. You will find Monte's Window™ indispensable. When you are finished, break back to your application program and it resumes without error. Monte's Window™ is truly a breakthrough. See for yourself – Look through Monte's Window™ on your Model 4. How did you ever get along without it? See the page opposite for order information. Monte's Window™ is available right now.

CP/M...The Software Key That Unlocks Your Model 4

CP/M is the standard 8-bit Z-80 operating system and many thousands of programs have been written to run under this system. With Montezuma Micro's CP/M you can run these programs on your Model 4/4P. Think about all those nationally known programs you've wanted to use. Programs like WordStar, dBASE II, SuperCalc, MultiPlan etc. With our version of CP/M 2.2 all those public domain programs on bulletin boards across the USA are available for free downloading. CP/M is the missing link that joins all this software to your Model 4/4P. Montezuma Micro's CP/M comes ready to use and requires no hardware modifications. This product has been awarded the best and highest ratings in the reviews and we are continuously improving it with you in mind. With our CP/M you get more than just a DOS. You get the other half of your Model 4/4P.

AVAILABLE NOW FOR IMMEDIATE SHIPMENT - Less Hard Disk Drive Support \$169
Optional Hard Disk Drive Support \$ 30

(Radio Shack 5M, 12M, 15M, 35M • Aerocomp/Percom 5M, 10M, 15M, 30M • 9i-Tech 5M, 10M, 11M, 15M, 20M, 30M, 40M)

FEATURES

- Full range of floppy drive support. Dual-head and/or 80 tracks.
- Optional hard disk support allows positioning and selective assignment of logical drives. Easy backup routine.
- Memory drive allows the use of the other 64K RAM bank on 128K machines.
- Modem 7, a powerful public domain communications program furnished at no charge, allows for file transfer and remote database access such as CompuServ and The Source.
- CONFIG is our flexible utility that allows complete control of all operating parameters from menus. Format, read and write more than 30 different manufacturer's disk formats with more being added rapidly.
- Disk Utility Program allows fast format, backups and verifying of ours and other manufacturer's disks.
- These CP/M utilities are included: ASM; DDT; DUMP; ED; LOAD; MOVECPM; PIP; STAT; SUBMIT; SYSGEN; and XSUB.

"WE KEEP YOU RUNNING"

The PRODUCER
Winner of
★★★★★
FIVE STARS
in 80 MICRO Magazine's
Software Review

January 1985
The PRODUCER gained
this perfect rating
based on
Ease of Use
Quality Documentation
Freedom from Bugs
Ability to Do the Job

You can quickly create programs
to manage such things as
mail lists, personnel records,
inventory control, catalogs,
loan calculations, schedules,
personal finances.
The only limit
is your imagination!

**THE PRODUCER
CAN SAVE YOU MONEY!** Why buy
expensive data base programs that never
quite do what you want. The PRODUCER
can write all your data storage and
retrieval programs for you -- quickly,
easily, and to your exact specifications.
Investing in The PRODUCER is money
saved over and over again.

**THE PRODUCER
CAN SAVE YOU FRUSTRATION!** No
more frustrating dependence on
inadequate software that someone else
packaged for mass consumer use. With
The PRODUCER you can design and
write custom software to meet your exact
needs. You can become a programmer
even though you have no previous
programming experience. The
PRODUCER helps you plan what you
want and then writes all the code for you at
the push of a button.

**THE PRODUCER
CAN SAVE YOU TIME!** What formerly
was impossible for novices, can now be
done with ease. What formerly took
professional programmers days and
weeks, can now be accomplished in
minutes. After a few hours going through
The PRODUCER's easy to follow Tutorial,
you will have an incredible time saving
tool at your fingertips. Most PRODUCER
users testify that they can create complete
programs from start to finish in as little as
fifteen minutes. You will soon be
wondering how you could ever have done
without The PRODUCER.

The PRODUCER Professional Program Writer

Beginners can program with no experience necessary.
Professional programmers can save days and weeks of time.

WITH THE PRODUCER YOU CAN ENJOY THESE OUTSTANDING FEATURES

- An easy-to-follow tutorial that takes you step by step through The PRODUCER process. It's all you need to get started and even lets you create an actual program as you learn.
- The best screen generator available anywhere. You have full screen control including graphics. You can add, insert, delete and move blocks of text on screen or between screens.
- Full support for all math functions, including subtotals and global calculations.
- A B-Tree file structure, that gives extremely fast access to data, allows global search and replace, data entry by batch mode and automatic file rebuilding.
- The Freeform Report Generator provides amazing versatility to design text placement, interfield calculations and formats. You can even print reports on your standard forms.
- Full editing control at all times. You can easily edit and retine at any point, including the finished program, without having to start over. That's a feature not found on other products. The screen generator lets you experiment, rearrange, "cut and paste" between trial screens and change your mind any time you wish.
- A fully indexed reference manual of over 200 pages gives you complete technical support at your finger tips. You may never need to read it, but it is all there just in case.
- Outstanding technical support. Your PRODUCER package comes with four free issues of The PRODUCER quarterly newsletter. And should you ever need direct technical assistance, you may call a Producer Software technician for free counsel and trouble shooting.
- No payment of royalties. That's right. Provided you give proper credit, you may sell PRODUCER generated programs without paying royalties. Finished programs do not need the original PRODUCER system disk to run, so they are easy to duplicate and distribute. The PRODUCER can put you into the programming business for friends and associates.

★★★★★

"The longer I used The Producer, the more impressed I was. After only one month, it had found a place among my most often used software."

Hardin Brothers
Reviewer, 80 Micro

"The Producer is an excellent package, capable of doing everything I wanted it to.

Hardin Brothers
Reviewer, 80 Micro

"The Producer will allow you to develop a data base program in a couple of hours that would take months to program and debug by hand."

Charles Knight
Reviewer, Basic Computing

"The Producer is certainly one of the better buys in today's software marketplace."

Charles Knight
Reviewer, Basic Computing

Tandy to 4P: Drop Dead

Tandyland

"The TRS-80 Model 4P went on sale on April 22, 1985, for \$649.95 and will remain at that price until the last one is gone. We've stopped production on the product and when the last one is sold, there will be no more 4Ps."

So spoke Tandy's director of market planning, Ed Juge, confirming speculation that Tandy's 8-bit transportable was on its way out (see the Photo). Only a month before, Model 4 line manager Stewart Weinstock denied that Tandy planned to discontinue either the 4 or the 4P. As for the Model 4, Juge insists that the desktop still has a long life ahead of it.

Juge said Tandy axed the 4P because "it was not a particularly hot seller," although he conceded that it has a loyal following. Juge added that 4P owners needn't worry about repairs and support. According to Tandy policy, parts will continue to be available for seven years after they sell the last machine. And as long as the Model 4 survives, users can find software for the 4P.

From the matter of the 4P, Juge went on to talk about Tandy's plans for MS-DOS computers. Stories in the *Wall Street Journal* and *Infoworld* last April cited speculation that Tandy would soon introduce two new MS-DOS computers: a portable, rumored to be the Tandy 800, and a PC AT clone, possibly called the Tandy 4000.

Juge called my attention to a statement by Tandy chairman John Roach summing up Tandy's attitude toward MS-DOS. Said Roach, "Obviously you've got to deduce that Tandy will stay in the forefront of the MS-DOS market and examine new products as the market evolves. In that way we will introduce products that make sense for us in that market."

Photo. Time runs out for the 4P.

But Tandy isn't in the clone business, according to Juge. When Tandy markets a product similar to another company's, he said, they try to take it further and make a better machine. "The only true clone we have is the Tandy 1200 and that was brought out because it was a good deal."

Juge said Tandy had no plans to bring out any new MS-DOS products before the end of summer, no laptops and no AT work-alikes. After that, we'll all just have to wait and see.

Price cuts on Tandy's computers were the rule last April. The Tandy 2000 and the 1200 each went down \$1,000 in price to \$1,999. The Model 12 was going for \$1,595, and the Model 100 took another price cut. Even the hot-selling Tandy 1000 was ripe for a markdown. Securities analyst Joan McKay of Kidder Peabody indicated Tandy would probably drop the price of the 1000 by 25 percent. Tandy's John Roach seemed to concur. "It can't stay up there forever," Roach said, referring to the 1000's current price tag of \$1,199.

All this price slashing is part of Tan-

dy's new aggressive pricing policy. But even a \$1,900 price cut might not be enough to keep the Model 12 alive. The low price sparked some interest in the 12 according to Tandy, but sales remained less than stunning. Competition from MS-DOS computers and from the remodeled Tandy 6000 hurt the 12's sales.

Still, the word from Tandy was that they wouldn't discontinue the Model 12 in the near future. Ed Juge explained the 12's huge price cut: "The cost of the Model 6000 has come down so dramatically with so much more horsepower that the price spread did not make much sense." In the past, an upgraded Model 12 cost \$4,099 while the Tandy

6000 cost \$4,495. Now Model 12 owners can upgrade for \$3,395, a difference Tandy hopes will help move the machine off Computer Center shelves.

It wasn't all glad tidings when Tandy announced its third-quarter earnings. Overall sales for the quarter were \$670.5 million, up from \$656.1 million for the same quarter a year ago. But earnings per share fell to 25 cents from 60 cents in 1984.

The share earnings drop resulted from an \$18 million write-off on computer hardware and software, goods that had declined in value since Tandy bought them. Tandy said declining prices for semiconductors and some computer subassemblies, as well as deterioration in market pricing of competitive equipment, made it prudent to write down raw materials and finished goods associated with the Tandy 2000. The write-off also included the cost of upgrading the Model 100 to 24K and the cost of some software associated with older computers.

The move might hurt Tandy's standing with investors, which had been high (see the June 1985 Pulse Train), but

John Roach sees benefits down the road: "This write-off of computer-related materials and products compensates for recent changes in market conditions and should permit us to continue to aggressively pursue our goal of providing outstanding value in microcomputer hardware and support."

Hot Items

Now that Tandy is committed to MS-DOS, some TRS-80 third-party software makers are following suit. Notable is Dallas-based Powersoft, which introduced an MS-DOS version of its venerable Super Utility disk-zapping package. In a simultaneous move, the company took the copy protection off the Model I/III/4 version and said it would provide Super U's/CMD file to registered owners for a small extra charge. The MS-DOS Super U costs \$89.95 for first-time buyers; registered TRS-80 version owners get a \$10 discount.

The Model I/III/4 version is widely considered an indispensable disk-repair utility, beloved by hackers and do-it-yourself types. In catering to the MS-DOS market, Powersoft took great pains to make the product easy to use and understand, even for users unfamiliar with disk-storage formats. Peter Norton's Norton Utilities has become the MS-DOS standard for saving disks and files. But TRS-80 owners are a loyal lot, and Powersoft is hoping their allegiance will help them find a place in Norton's neighborhood.

Powersoft's president, Dennis Brent, told me he wanted to avoid downgrading The Norton Utilities. In fact, Powersoft is pushing its new product not as an adversary to Norton's, but as a supplement that provides more utilities for saving files and reading blown disks.

While some old TRS-80 products are going MS-DOS, the opposite is also true. One of the trendiest MS-DOS applications, idea processing, is finally accessible to Model 4 owners in a product called Kamas. According to Adam Trent of Kamasoft, the program's manufacturer, Kamas works for people in text-intensive professions as an outline processor similar to ThinkTank, while at its highest level, you can use it to create custom applications, much like dBase II. At the time of the product's announcement, Kamasoft expected the program to run on the Models 4 and I/12/6000 running CP/M.

MicroTrends

Some of the big American micro-computer companies took their wares

Word Processor	Market Share (%)	Units Sold
Wordstar	24	290,000
Applewriter	22	254,000
Scrispitt	13	150,000
PFS:Write	8	92,000
Magic Word	7	80,000
Easywriter	4	50,000
MultiMate	4	51,000
Word Handler	4	50,000
Franklin 5000	4	40,000
Perfect Writer	3	33,000

Table. Top word processors in worldwide market share.

to West Germany last spring for Hanover Fair, the European equivalent of the Consumer Electronics Show. A number of hardware manufacturers, including Tandy, were showing Digital Research's new operating environment, GEM, on their equipment. Officially, however, Microsoft Windows is still the windowing product Tandy's backing. Microsoft didn't appear: in fact, its only obvious presence was through the many MSX (Japan's standard Microsoft operating system) machines at the fair.

Europeans seemed to be warming up to the 80186 technology Tandy pioneered in its Tandy 2000. Overseas firms showed interest in Intel's 80186 in anticipation of IBM's use of the chip in a new, low-end computer. The feeling in Europe is that IBM will use Intel's 80286 in the IBM PC II; the PC AT already uses the 80286.

One of the more interesting new product announcements to come out of Hanover Fair introduced Brother's Twinwriter 5, a double-action printer incorporating a daisy-wheel and a dot matrix printhead in the same housing. The daisy wheel puts out 36 characters per second (cps), while the dot-matrix alternative prints 140 cps. Brother is aiming the product at small businesses that need both printing capabilities.

Last year, word processors accounted for one-fourth of all applications software sold worldwide. According to Infocorp, 1.2 million packages went for an average price of \$275, for a total of \$300 million in sales.

The top five sellers in the word processing market worldwide included Radio Shack's Scrispitt, which placed third with 13 percent of the market (150,000 units sold). Topping the list was Wordstar with 24 percent of the market, while Applewriter was a close second at 22 percent. PFS:Write was fourth with 8 percent; Magic Word with 7 percent came in fifth (see the Table.)

When I asked Tandy's Ed Juge about

Scrispitt's strong showing, all he would say is that the figures probably weren't too far off—Tandy doesn't release actual sales totals for their products.

Update

As this column went to press, word came in from Fort Worth that Tandy expected to start an Express Order Hardware service in July or August. EOH complements Tandy's existing Express Order Software service, through which customers can order non-Tandy programs from Radio Shack stores.

According to Tandy's Deborah McAlister, the EOH system will carry peripheral items such as add-on cards, cables, and other noncomputing devices. Negotiations with manufacturers were still underway when I spoke with McAlister.

Tandy's support for Digital Research's GEM operating system became more concrete late last spring. The two companies signed an agreement that would make GEM, a graphics environment manager for MS-DOS computers, available through Radio Shack's Express Order Software service starting in June.

What's new on the small computer scene? Confusion, that's what. A recent market study by Frost and Sullivan distinguishes among four categories of portable computers. The smallest of the small are the lap-tops, like Tandy's Model 100/200 line. Briefcase computers, like Hewlett-Packard's HP-150 or the Apple IIc, come next. Of course, lap-tops fit into a briefcase, and you can use a briefcase model on your lap. But never mind. The two remaining categories are transportables, like Tandy's discounted Model 4P, and Apple Macintosh-type computers.

Frost and Sullivan predicts 5.9 percent annual growth for the portable market overall, but market prospects vary wildly from category to category. For example, the study points to declining sales in transportables, bearing out Tandy's decision to stop making the 4P. Prospects for laptop sales, in which Tandy is the industry leader, are better, although the survey warns that revenues may fall.

The biggest growth from now through the end of the decade should come in briefcase-size machines—14 percent growth in dollars, and 24 percent in unit sales. As for the Macintosh, Frost and Sullivan expects it to become the number-one portable computer, with unit sales jumping from 200,000 in 1984 to 550,000 in 1989. ■

The Mad Patcher

Here's an improved version of one of my TRSDOS 1.3 patches ("Patch Work," January 1985, p. 112). Patch 8 modifies the Free command to give you the total number of free granules on a disk, but the patch also shortens a prompt in the rarely used Prot (PW) command. No big deal, but the patch below doesn't affect the Prot prompt:

```
PATCH *6 (ADD = 5483, FIND = 26, CHG = 3C)
PATCH *6 (ADD = 5526, FIND = 4D61737465
7220, CHG = FE28D8F1C3FC5B)
PATCH *6 (ADD = 5D52, FIND = FE28D0,
CHG = CD2655
```

You must install all three patch lines. Also, if you already have patch 8 in place, you must undo it by reinstalling the original patch, swapping the numbers in the three patch lines' Find and CHG fields.

For truly masochistic readers, I have a 29-line, wall-to-wall patch that inserts

the CAT command in the TRSDOS 1.3 Help listing, replacing the nonfunctional Route command. I'll be happy to mail the patch listing to anyone who sends me a stamped, addressed envelope and

a dime to cover copying costs. I'll also include the listing for an experimental patch that lets you run TRSDOS 1.3, once booted, from drive 1 in a two- or three-drive system.

Zap Gap

The Figure shows changes to David A. Williams' Disk Zapper ("Zap Master," April 1985, p. 62) for editor/assemblers other than MZAL. We'd like to thank Thomas E. Oakes of N. Liberty, IN for bringing them to our attention.

—Eds.

DD Diagnosis

I discovered a zap to Dave Stambaugh's Floppy Doctor diagnostic program—the zap lets Model I owners using Radio Shack's double-density modification test for single- and double-density operation. You make the zap to relative sector 223 on the diagnostic disk. I used NEWDOS/80's Superzap utility. If you use Superzap, make sure the drive you're using has the following single-density PDrive attributes:

```
TI = A, TD = A, TC = 35, SPT = 10, TSR = 3,
GPL = 2, DDSL = 17, DDGA = 2
```

If the diagnostic disk is in drive 1, invoke Superzap and type in:

```
DD <enter> (Display a disk sector)
1.223 <enter> (Display sector 223 on drive
1)
MOD17 (Modify byte 17 in the sector)
```

Now, change

```
EC 37 36 FF 36 D0
```

to

```
EE 37 36 80 36 E0
```

by typing in the second set of 6 bytes. Press the enter key, press "Y," press the enter key again, and type in EXIT.

To use the modified disk for double-density testing, you must have the test disks in double-density format. Also, readers who don't want to alter their original diagnostic disks can create a

Change line 128 to: 128 ORG 3100H
Insert the following macro code expansions immediately after the ORG statement:

```
SVC MACRO #V1
LD A,#V1
RST 2BH
ENDM

CPR MACRO #V1
SCF
CCF
SBC HL,#V1
ENDM

MOVI MACRO #V1,#V2,#V3
LD DE,#V1
LD HL,#V2
LD BC,#V3
LDIR
ENDM
```

Depending on your editor/assembler, you might also have to make the following changes:

In lines 1218, 1278, and 1408, change the code LD BC,IX to two lines:

```
PUSH IX
POP BC
```

In line 3278, change the code LD HL,IX to two lines:

```
PUSH IX
POP HL
```

You might have to change the labels MOD, MODA, NOT, and NOTA if MOD and NOT are reserved words in your assembler.

EDAS users should also make the following changes:

```
#3918 DC 14,' '
#3920 DC 80,' '
#3940 DC 14,' '
#3950 DC 88,' '
#4280 DC 80,' '
#4290 CMD DC 80,' '
#4300 DC 160,' '
```

Figure. Modifications to Disk Zapper for editor/assemblers other than MZAL.

ANYONE CAN USE OUR SOFTWARE!

MAIL PAC II and CHECKING PLUS represent a new generation of computer software. Our software doesn't even need a manual! Anyone can quickly learn to use either package by following simple, explicit on-screen instructions. But, for those of you who insist -- we've included a complete user's manual as well.

MAIL PAC II FEATURES:

High Capacity --

Stores from one to one million names in Zip Code, Numerical or Alphabetical order. The only limitation is your disk storage space.

Flexibility --

Prints your mailing list on 1, 2, 3, or 4-across labels (with up to 5 user-defined lines on each label) or as a compact, user-designed directory. The record length is completely user-defined, and each field within each of your records is completely variable (allowing storage of any number of characters for any particular address entry). Devote fields to telephone numbers, codes, or even special messages related to each particular name on file.

Powerful --

A built-in word processor allows you to create personalized form letters for each address on your list (or just a particular group of addresses).

Ease of Use --

Create new mailing lists, review existing lists, handle changes of address, delete cancelled names, sort lists, and purge duplicate names from your files. Complete on-screen instructions tell you in plain English exactly how to accomplish all of these tasks.

MAIL PAC II \$99.95

CHECKING PLUS FEATURES:

Complete Check Register --

Checking Plus stores your entire check register in a disk file, and then uses the data to balance your account, track your expenses, and help you make budget projections. Review the entire checkbook, enter checks, deposits, fees and adjustments, mark outstanding checks when paid, and get an instant cash balance at any time. All data can be viewed onscreen or printed out in report form.

Tax Preparation --

Storage of monthly and yearly totals and other important information aids in income tax preparation, for your personal use or for your accountant.

Handles the Details --

Store names and addresses for frequently written checks, then print checks to fit standard window envelopes, eliminating the need for extra typing. You can even store any comment, explanation or other message (up to 255 characters) related to a particular check.

Automatic Monthly Bill Payments --

Enter amounts and names of payees for all of your fixed-cost monthly payments, and then sit back while the system automatically prints checks.

CHECKING PLUS \$99.95

Both Programs Require 48K And At Least One Disk Drive (2 Drives For Higher Storage Capacities). And All Hard Disk Systems Are Supported.

FREE-TRS-80 Mod I,III & 4 programs supplied on DosPlus (minimum system). Complete DosPlus also available.

Superlog 4: A Flexible Data Base at the Ready

by Gary Ludwick

★★★★★

Superlog 4 runs on the Model 4/4P (64K, 128K recommended) and requires TRSDOS 6.X. KSoft Inc., 318 Lakeside Drive, Brandon, MS 39042. Express Order Software number 90-0291. \$119.95. Utilities package \$49.95.

Easy to use: ★★★★★☆

Good docs: ★★★★★★

Bug free: ★★★★★★

Does the job: ★★★★★★

Superlog 4 is the kind of data base I like: It accommodates the unpredictability of human nature.

Rather than enforcing the rigid, unalterable structure of traditional data bases, Superlog lets you change Model 4 records and fields at any time: You add new information to existing records wherever you need to. But that's not Superlog's only remarkable feature. In a 128K system, you can run Superlog concurrently with another program, calling up the data base from high memory when you need it. Also, Superlog lets you read data from or write data to other files. Finally, Superlog 4 provides a set of utilities that enhance program operation.

How It Works

KSoft describes Superlog as an "electronic notebook" rather than a data base to emphasize its flexibility—you can add information to the data base as you would to a notebook. For example, say you have a notebook of names and addresses and you want to add telephone numbers. You call up the records of interest (or all records) and enter a new field and the phone number. It's that simple.

Superlog acts like a series of notebooks. Each notebook (data base) can hold 32,767 pages (records), each of which stores up to 1,024 characters. How many data bases you create is limited only by the number of blank disks you want to buy.

Once you install Superlog in protected high memory, you can either call it from an applications program or run it in a foreground mode as you would any other applications program. (With a 64K Model 4, you can only use Superlog in the foreground.) You can use Superlog with any other program, as long as the other program doesn't take up both extra 32K memory banks.

To interrupt a working program and call up Superlog, you press the control and both shift keys simultaneously. The Superlog logo appears and asks you for the file (data base) you want. Type in the name of the data base file resident on one of your disk drives, and Superlog takes you immediately to page 1 of that data base. Hit the break key and you're back where you left your foreground program.

Creating Notebooks

Superlog 4 is a sophisticated and somewhat complicated program. KSoft has, in effect, combined a word processor with a data base in a unique way to give you Superlog's notebook features.

To create your data bases, you first supply a name at the file name request prompt. If the data base doesn't already exist, Superlog 4 asks if you want to create it. A "yes" response does so and

shows you page zero of that data base.

After the header, you can enter information in any format you want. To repeat a set of fields throughout the data base, you duplicate as many pages as you want (up to the limit of 32,767). If your disk can't contain the requested number of pages, Superlog will write as many as possible, then return a "Disk full" message.

Editing Your Notebooks

Once you create a data base, you can edit and manipulate the data in many ways. Superlog offers the same kinds of editing commands as any good word processor. It offers a couple of other unique features as well.

Cut and Paste is a feature unavailable on previous versions of Superlog. It lets you take information from one part of the current data base (or any Superlog data base) and move it to a new position.

If you have a 128K Model 4 with Superlog running in the background, you can move data from your data bases into any foreground program such as a word processor, Basic, an editor/assembler, or into TRSDOS itself.

Exactly how Superlog 4 does all this is a bit complicated, it creates 26 buffers (one for each alphabet key) and lets you assign information from your data bases to any of them. A single buffer, or any combination of buffers, can hold up to 20,000 bytes of information. Once you've marked the desired data and assigned it to a buffer (Cut), you can then move to any foreground program and write that information there (Paste).

This function offers all kinds of possibilities. After weeks of working with Superlog 4, I'm still coming up with new uses for Cut and Paste. You'll probably use Superlog's search function most often. Superlog offers both case-specific and case-indifferent searches. In addition, you can search for multiple words

and phrases or for unknown characters and variations through a wildcard search function. It's a powerful command that works fast.

Utility Programs

Superlog 4 also comes with a number of utilities. One lets you convert earlier versions of Log or Superlog to Superlog 4 and TRSDOS 6.X format. Another creates a calendar/log file you can call up for any month of the year, even from a foreground program. Superlog also provides a quick-reference help file, as well as a line printer utility that lets you automatically print out the data bases.

Superlog gives you another utility that's really a program in itself, Key/CMD. This program works with the cut-and-paste functions so you can load or append buffers from a disk file or a text string and insert control characters. For instance, this would let you move text from a word processing file into buffers and then paste it into various data bases. Or you could load data into key-designated buffers, perform various editing functions, and rewrite it to the original disk file. Like most Superlog 4 functions, its use is limited only by your imagination and needs.

New Utilities

KSoft recently introduced a package of five utilities to give you even more control over your Superlog files. These five programs let you insert and delete groups of pages at any point in the file, move one page or block of pages to another position in the same or different files, copy pages from one file to another, change the header titles on any group of pages, and renumber Superlog 4 files that you have merged together with the DOS Append command. I tried all these machine-language utilities and found they further enhance Superlog's data base/editing capabilities.

While they offer much additional power to the experienced Superlog 4 user, the key word here is experienced. I would suggest that new Superlog 4 users gain an expertise with the main program before venturing into these powerful utilities.

Conclusion

Superlog 4 fills a need for a full-featured but flexible data base that you don't have to be a programmer to use effectively. The accompanying manual is a model of clarity. It isn't huge (42 pages) but it thoroughly explains every aspect of Superlog 4.

One thing that would help in getting started is a small reference card covering Superlog's extensive command structure. ■

**GW-Basic Compiler:
A Poor Performer**

by John B. Harrell III

★★

MS-GW-Basic Compiler (version 5.05.00) runs on the Tandy 2000 (256K) and requires two disk drives. Tandy/Radio Shack, One Tandy Center, Fort Worth, TX 76102. Radio Shack catalog number 26-5251. \$299.95.

Easy to use: ★★★★★☆
 Good docs: ★★★★★☆
 Bug free: ★☆☆☆☆
 Does the job: ★☆☆☆☆

I have been waiting to use Microsoft's GW-Basic compiler since I started using the Tandy 2000. Now that I've had a go at it, I'm disappointed. While the compiler increases program speed by up to 100 times, it performs abominably when writing to the screen in color, and the compiled color graphics code won't even run under the newer version of MS-DOS (2.11). This product has some serious problems.

The Compiler Package

One of the first surprises you'll notice with this package is its small, 100-page documentation. The manual addresses only the compiler's operation and the specific differences between it and the Basic interpreter. But this isn't a critical drawback since the compiler's commands are so similar to those in Basic that you can use your Basic reference manual as a guide.

The package disk contains the compiler program, two libraries, and a run time support module. Many of the compiled instructions call support routines in the libraries, similar to the way Model i/III Basic makes calls to the ROM.

Because of Microsoft's distribution requirements, the compiler has two libraries. One provides a complete implementation of the compiler language with a link to the run time support module. This module, a separate file on the disk, loads when you execute the compiled program. You can't distribute the run time module without first signing a licensing agreement with Microsoft.

The second library contains all the run time support and creates a stand-alone program that you can distribute as long as you state that you compiled the program using Microsoft's product. However, this library does not entirely support the language. Specifically, it doesn't recognize the Common statement, and it treats the Chain statement as a Run command. Consequently, you can't easily share data in a system of programs when you link them to this library.

AUTO	LLIST

ERASE	SYSTEM
LIST	

Figure 1. The GW-Basic compiler doesn't support these Basic commands.

Using the Compiler

The compiler differs from the Basic interpreter in operation, implementation, and language. The manual does a good job of explaining these differences, however. In addition, the compiler fails to support some Basic commands (see Fig. 1).

Tandy recommends that you test the compiler with the demonstration program provided. First, you run the compiler and type in the responses to the prompts, clearly defined in the manual. After that, the compiler compiles the source program and creates an object file as an intermediate output.

You then convert the object file into an execution file using the linkage editor, which also generates a listing you can send to the video, a printer, or a file.

The compiler uses switches to execute special functions during compilation or to alter a normal compiler function (see

The Star Ratings

80 Micro's star ratings reflect our reviewer's impression of a product.

In most cases, the overall rating is an average of the ratings in each of the four specific categories. However, some overall ratings may be higher or lower than this average, depending on the reviewer's subjective opinion.

The stars mean:

- ★★★★★ Superior;
- ★★★★ Excellent;
- ★★★ Good;
- ★★ Fair;
- ★ Poor.

The ratings terms translate as follows:

Easy to use: How easy is it for the new user to use the hardware/software/book?

Good docs: Is the documentation clear and helpful in explaining the product's use and anticipating user problems?

Bug free: Did the reviewer encounter any bugs while using the product?

Does the job: How well does the product do what it was designed for?

CONVERT MOD I/III BASIC PROGRAMS and FILES For Use On The IBM PC, TANDY 1000, 1200HD, 2000

Here's time and money saving news for thousands of TRS-80 Mod I and Mod III owners who would love to move up to state-of-the-art hardware! EMSI's conversion package contains utilities to solve both problems facing those who want to upgrade:

PROBLEM 1—HOW DO I GET FROM HERE (Mod I/III) TO THERE (PC)? Do I need to retype everything, buy modems, RS232's, cables and communications software?

ANSWER: None of the above! Use the HYPERCROSS utility included with our package! HYPERCROSS makes the entire disk transfer process very simple—and fast. All the work is done right on your Mod I/III. HYPERCROSS lets you format a diskette readable by all PC's in one drive and copy files directly to it from a Mod I/III diskette. After the transfer, take the PC diskette out of your Mod I/III and put it in your PC. Simple as that! (Mod I's need a doubler).

PROBLEM 2—ONCE I'M THERE, HOW DO I CONVERT MY MOD I/III PROGRAM TO RUN ON A PC?

ANSWER: Use our CONV3TOPC utility to do 95% or more of the conversion for you. It automatically inserts all required spaces between keywords, replaces PRINT@'s (even those with variables) to LOCATE's, adjusts TAB addresses, corrects the exponentiation symbol, replaces the % symbol in USING statements with a backslash, removes down arrows, optionally removes REM's and flags and lists unresolved line numbers. It even allows for Mod I/III screen PEEKs and POKEs.

And, Our thirty page user guide is packed with examples and hints showing how to make any manual program changes required after using CONV3TOPC.

So, there you have it. HYPERCROSS gets you "over there" and CONV3TOPC performs most of the required program changes. Sound too good to be true? Don't take EMSI's word for it. Here are excerpts from two magazine reviews. Note that since publication of these reviews, CONV3TO2000 V1.0 has been enhanced and consolidated with CONV3TOPC V1.0 into one package, namely, CONV3TOPC V2.0

"...Its the best such program I've seen, well worth its higher price over similar programs...The conversion program performed flawlessly. CONV3TO2000 works so well it merits the \$139.95 price tag...."

Mr. Gary Shade, 80 MICRO, May 1985 (4½ stars).

"The documentation is a very strong asset to this package...More software producers should put out documentation like this...NICE JOB BY EMSI!..."

Mr. Lon Andrews, COMPUTER SHOPPER, December 1984.

Customer comments:

"Truly, a Superior Quality Software Package. Count me among your list of satisfied customers."
Waltham, MA

"I would gladly recommend the package to anyone making the change to an IBM type machine."
Wauwatosa, WI

"The fine points of conversion you cover in the manual are excellent."
Salem, OR

"What a time saver. Thanks for a great product."
Denver, CO

"An excellent product. Thank you for the service."
Mapa, CA

"Excellent Software. Outstanding Support."
Wyncote, PA

"Works like a charm! Congratulations."
Odenton, MD

Table 1). For example, one command lets the compiler accept unnumbered Basic programs resulting in a faster final program; another lets you invoke a tracing function so you can follow program logic.

You can also use metacommands in your source code to spell out what you want the compiler to do. Metacommands control the source listing format and provide an include facility; they're similar to Basic comment statements.

Performance

To its credit, Microsoft's compiler is easy to learn to use; in terms of function and program logic, it's highly compatible with Microsoft's other interpreters.

On the other hand, the performance of the generated code gets the lowest possible evaluation I can give it. In almost every instance, it performs slower than a Basic program when writing text to the video display, especially when writing in color.

I made a series of tests to see how the compiler performed. I tested full-screen graphics performance and text and graphics intermixed, speed of writing full 80-character lines in both color and black and white, and computational performance using the Sieve of Eratosthenes prime number generator.

The compiler produces graphics slowly. In four out of the six graphics tests, the interpreter handled information faster than the compiler (see Table 2).

If you have to print a lot of information to the screen, you're out of luck. The best performance you'll get out of the compiler is that either equal to the interpreter (MS-DOS 2.11) or inferior (MS-DOS 2.00 (see Table 3)).

The compiler handles quantities of data or computations fast. The compiler took only 0.8 seconds to complete the Sieve of Eratosthenes test, while the interpreter took 81 seconds.

In addition to these results, I noted that the generated color graphics code simply would not run under MS-DOS 2.11. Apparently, Microsoft patched the compiler code generators to compensate for the inadequacies in the earlier operating systems.

The compiler exhibits a few other problems. The Clear Screen command doesn't always work. Midway into the program run, the screen turns into a jumble and is totally unusable.

The Color command for selecting inverse video doesn't work like the Basic interpreter's. You select inverse video for only a partial line with the interpreter, but the compiler inverts an entire line of text unless you turn on normal video at the end of the text. Also, I couldn't turn off the cursor in the color mode and it was annoying to watch it slowly jumping all over the screen.

Conclusion

I have used Microsoft's Basic compiler under CP/M and TRSDOS 8.X and haven't had any troubles with them. This review takes issue with its implementation on the Tandy 2000 and, specifically, the screen-handling routines.

Tandy promises an upgraded version of the compiler soon that should fix most of these problems and make it compatible with MS-DOS 2.11.

Unless you compile programs that only work in black and white, I can't recommend this compiler. Its performance is totally unsatisfactory. ■

Category	Switch	Result
Conventions	/4	Compiler uses language convention of older Microsoft compilers.
	/T	Invokes execution conventions of older Microsoft compilers.
Error-handling	/E	Generates a line-number address map.
	/X	Maps each statement to a physical address.
Special switches	/A	Lists equivalent 8086 code for each source code line.
	/D	Generates additional code for debugging and error-handling.
	/N	Minimizes line-numbering constraints.
	/O	Generates references to alternate function library.
	/R	Stores arrays in row-major order.
	/S	Writes string literals to the output file.

Table 1. Special switches the GW-Basic compiler supports.

Program	Interpreter time (seconds)	Compiler time (seconds)
Graphics.BAS bar chart	2.8	8.1
Graphics.BAS curves	12.3	4.9
Graphics.BAS area plot	7.8	18.1
Graphics.BAS pie chart	11.4	23.4
American flag	9.1	10.3
Confederate flag	17.4	35.2

Notes:

- *The significantly faster time for the curves segment of Graphics.BAS is indicative of the compiler's performance in computations and should not be construed as graphics performance.
- *If you compile Graphics.BAS, you will get a run-time error indicating a type mismatch while drawing the area graph. This is caused by the Draw command's limitation.

Table 2. Color graphics performance of the GW-Basic compiler.

Screen mode	MS-DOS 2.00.02		MS-DOS 2.11.01	
	Interpreter (seconds)	Compiler (seconds)	Interpreter (seconds)	Compiler (seconds)
Black & white	1.5	1.7	1.3	1.3
Mode zero				
Color Mode 3	4.3	33.3	2.8	9.5

Notes:

- *This program consisted of a simple For...Next loop that counted from 1 to 24, performed a Locate for each video row, and then wrote a string of 80 characters. Screen mode was zero for the black-and-white tests and three for the color text tests.
- *Even though the times for MS-DOS 02.11.01 show significant improvement, this is attributed to the improved BIOS code and not the compiler. Further, the video screen was instantly set into bright yellow with bright white letters and could not be changed, making the screen virtually unreadable.
- *BASIC 01.02.00 was used under MS-DOS 02.00.02 and BASIC 01.03.00 was used under MS-DOS 02.11.01.

Table 3. Compiler performance writing text to the screen.

Three For the Road

by Mare-Anne Jarvela

If you often use a laptop computer to work out of your briefcase, you'll probably want to print out a document at some point. Portable printers will do the trick—they're small enough to fit in your briefcase and they run on batteries or ac power. You'll find a number of them available, both dot-matrix and letter-quality, in different price ranges and with various features.

I reviewed three portable printers, two thermal dot-matrix and one letter-quality (see the Photo). The thermal printers, the ThinPrint 80 and the Hush 80, are quiet but require special paper. The impact printer, the ThinType 80, works like a standard desktop printer and produces near-letter-quality text, but it's slow and noisy (see Table 4 for a list of specifications).

The ThinPrint 80

The ThinPrint 80 is a compact thermal printer. It comes with either a parallel or serial interface and uses 8½-inch roll paper, handily stored inside the printer. A slide switch selects between the two print modes: normal 80 characters per line and compressed 136 characters per line. It also has continuous dot-addressable graphics capability.

This is a true intelligent printer with bidirectional look-ahead printing (after it

Photo. Three portable printers, from top to bottom, the ThinPrint 80, Hush 80, and ThinType 80.

prints one line left to right, it examines the next line in the buffer and selects the most efficient printing direction). You can adjust the print intensity by turning a small knob at the rear of the printer.

The ThinPrint runs on a built-in rechargeable NiCad battery pack and comes with a recharger. If you don't use the printer for two minutes, its auto shut-off feature kicks in.

You only have to worry about a couple of buttons with the ThinPrint, and you can easily get at the Internal DIP switches to set up the printer. The manual is clear on this point and I didn't have problems getting the printer running.

Of the two thermal printers I reviewed,

I liked this one better because it offered features that fit my needs, like intelligent printing and variable print density.

The Hush 80

This thermal dot-matrix printer is fast, quiet, and simple to use. Like the ThinPrint, it stores its 8½-inch-wide roll of thermal paper internally, so you don't have to carry it separately (you can't use single-sheet paper, though).

The Hush 80 comes in three configurations: serial- or parallel-interface and Commodore-compatible. The printer itself weighs only 25 ounces, the paper adds another 11 ounces, and the NiCad weighs 12 ounces. All told, the printer

ONE MEGABYTE MEMORY

For Model 1, 3, and 4

Yes! You can now have 1 million bytes of accessible memory in the model 1, 3, and 4. You can now have a memdisk larger than a double side 80 track drive. Price starts at **\$229** for the first **256K** without the memory. Additional memory can be added at any time in 256K increments. Memory is installed inside the computer. Call or write for more details.

SuperMemdisk — Lets you use the 128K for applications and still use the extra memory for a RAMDISK. 192K for the 256K version or 386K for the 512K version \$49.95.

New from PowerSOFTSM Now Copy files From TRS-80 to PC/MS DOS or CPM and BACK with SuperCROSS/XT!

Did you just get a new Model 1000, 1200, or PC? How about CP/M? Just get that! Now with SuperCROSS/XT you can COPY your files TO or FROM 70 different DOS formats direct disk to disk! You can also FORMAT an alien disk, display the DIRECTORY or KILL files. Fully MENU driven with plenty of on-line HELP available! Very easy to operate in today's computer environment, especially for non-programmers.

GREAT new features make SuperCROSS/XT the transfer system of choice:

• "FOREIGN-TO-FOREIGN" file transfers for the first time!! No longer a two step operation! Setup two different DOS formats in two different drives ala SU+ for COPYing files back and forth.

• MASS FILE TRANSFERS! Now features a new TAG feature which allows you to "mark" any number of files for COPYing or KILLing!

• CONFIGURE for the DOS you COPY from most, for faster automatic startup time!

SKIP command for reading or writing a 40 track disk in an 80 track drive!

PowerSOFT presents the state-of-the-art file transfer program for use on the TRS-80! SuperCROSS/XT is designed to allow you to move DATA and program files freely between your own TRS-80 and DOS formats of other computers. You can now do this with SuperCROSS/XT and your existing hardware, eliminating modems, wires, and terminal program transfers. SuperCROSS/XT runs as a /CMD file under your TRS-80 operating system and will allow you to COPY files back and forth between different operating systems. You may format on a foreign disk in your TRS-80 and COPY files to it that can be read by, for example a Model 1000, a KAYPRO or an IBM PC. Note that machine language programs, although transferable, will NOT run due to the difference in microprocessor chips used in the different machines.

You can copy BASIC, PASCAL, FORTRAN, C, or other high level language programs, and run them with little modification, unless they make extensive use of graphics, or have machine language calls. CNVBASIC/CMD, available separately, will make most of the syntax and spacing changes required for converting Model I/III BASIC programs for use on other systems. Data files, spreadsheet files, and text files can also be usefully moved between machines. If you use or have the same Visicalc or Multiplan on the TRS-80, you can use the same files on other machines! These spreadsheet files are directly convertible to 123 and other calc-type programs. Of course, the combinations and possibilities are endless, and the flexibility is ALL there with SuperCROSS/XT!

DOS Formats Supported MS-DOS variations include MS-DOS 1.0, 2.0/2.1 single or double-sided (IBM and most compatibles), and Tandy 2000. CP/M variations include most well known single and double-sided formats including Tandy's 3.0+, Montezuma Micro 2.2 (all versions), Holmes and 60 others including: ALTOS, CROMEMCO, DEC, EAGLE, EPSON, HP 125, CP/M 86, KAYPRO, LNW-80, LOBO MAX-80, MORROW, NEC, OSBORNE, OTRONA, SANYO, SUPERBRAIN, TELETEK, TELEVIDEO, TRS-80, LIFEBOAT/I, OMICRON/I, HOLMES/3, HURRICANE COMPACTOR/3, SHUFFLEBOARD/3, XEROX, ZENITH-HEATII, and 8" standard CP/M. *Of course double-sided drives are required for reading DS disks. Use SS for transfers, if needed.

If you use another computer besides your TRS-80 at work or home— you need SuperCROSS/XT so call or write, but order today! Only \$99.95. Check VISA/Mastercard or COD accepted. Please add \$3 for shipping/handling (\$2 additional for COD). Foreign orders please add \$10 for AIRMAIL.

SuperCROSS/XT \$99.95
(Please specify Model I-DD/III, 4/4P, or MAX-80 version)
CNVBASIC/CMD (CONVERT BASIC for Mod I/III/4) \$29.95

All trademarks are the properties of the companies represented

weighs no more than 3 pounds.

The Hush 80 prints at a fast 80 characters per second, and does it so quietly you could talk on the phone next to it. It supports 129 different characters, including international characters. You can choose from three printing modes: the standard 80 characters per line, expanded mode with 40 characters per line, and compressed mode with 160 characters per line. You can also print dot-addressable graphics.

The printer comes with an interface cable, a power cord with a 9-volt transformer, and a roll of paper. You can buy either a non-battery version Hush 80 or one with built-in NiCads for \$40 more.

The printer's on/off switch is on the left-hand side of the unit, with the power cord socket inconveniently located underneath. The line-feed button is on the top right-hand side of the printer.

At first, I couldn't find the Hush 80's DIP switches to adjust line feed, and the manual didn't mention them. I called the company and they helped me find the switches (hidden under the printer's casing.) Ergo Systems has since moved the switches to underneath the front panel and the manual now explains how to set them.

Hush 80's features and price (half the price of the ThinPrint) make it a worthwhile buy.

The ThinType 80

If you need to print letter-quality documents on the road, the ThinType 80 is a good choice. Its printout is like that of a typewriter and it uses regular, single-sheet paper. But you pay for the quality: The ThinType is noticeably slower, heavier, and louder than the thermal printers.

The ThinType comes with internal rechargeable batteries, an internal ac adapter/charger, and a cable. It prints about 10 pages per charge and recharges in two hours. To help save battery time, the printer shuts off automatically if you don't use it within two minutes. You can order an external battery pack (\$79.95) and a dc car adapter (\$69.95), too.

The ThinType has a spin-wheel print head comprising five smaller wheels. The ink comes in an ink roll that's easy to replace and prints over 2 million characters.

The ThinType has two sets of power switches and indicator lamps. The ac switch is on the left, the dc on the right. The auto line-feed switch is located below the ac power switch. The printer cable goes into the back of the printer.

I had some problems getting the line feed to work correctly but after some trial and error, I managed to get it right. The ThinType 80's price and noise will make some people balk, but its print quality might override its drawbacks. ■

A Window On the CP/M World

by John B. Harrell III

★★★★★

Monte's Window runs on the Model 4/4P (128K) and requires Montezuma Micro CP/M 2.2 version 2.2X. Montezuma Micro, CP/M Support Division, P.O. Box 32027, Dallas, TX 75232. \$49.

Easy to use: ★★★★★
 Good docs: ★★★★★
 Bug free: ★★★★★
 Does the job: ★★★★★

Monte's Window is a valuable addition to any Model 4/4P owner with 128K who uses Montezuma Micro's CP/M. Like Borland International's famous SideKick package, Monte's Window gives you access to a single-screen note pad, calendar, calculator, index card file, and CP/M system functions at any time, even when you're working in another application.

Inside the Window

You activate Monte's Window by pressing both shift keys at once. You can call up a window any time, except with a CP/M system function active.

When you invoke a window, Monte's Window saves the current contents of the video screen, including the cursor location and screen information, in reverse video. When you exit a window (by pressing the control-C), the program restores your applications screen and your previous cursor location.

The note pad displays a single screen of data that you can edit, print out, or move to or from a disk. One notable option lets you copy your current screen to the note pad so you can manipulate it with Notepad commands.

Notepad's editor is a simple one, lacking many of the features of a full-fledged text processor, like an insert capability and search and replace. You can, however, clear the entire note pad and select reverse or normal video modes for it.

The text file Notepad creates measures 24 lines by 80 characters and terminates lines with end-of-line markers. If you call up a text file you created with another program and use it with Notepad, Monte's Window may wreak havoc with its format.

The calendar accurately displays any month in the years from 1700 to 2200. You can move forward or backward in time by month or year using commands displayed on-screen. You can also copy the calendar to the note pad to print it out.

Before Monte's Window displays a month, it scans the index card file for date-specific notations (meetings, appoint-

Introducing Super Utility 4/4P.

The indispensable first-aid kit for TRS-80 users only from PowerSoft.

Even the healthiest computer needs occasional "doctoring". And that's precisely what Super Utility 4/4P is for. To help you handle routine check-ups, take care of minor emergencies and perform major surgery with relative ease.

So effective it mends everything but a broken heart.

The latest generation of PowerSoft's highly-rated program contains over 60 different utilities. So you can examine file locations.

Reformat without erasing data. Test or manipulate memory. Save valuable data and disks. Revive dead files. And much, much more.

So easy you can perform near miracles in no time.

Version Four enhancements make Super Utility 4/4P easier, faster and more efficient than ever. It boots and loads 50% faster. Utilizes 64K for faster file

copies and backups. It's configurable with most Model I/III/4 operating systems for fast, easy transfer of files. And introduces three function keys, including a user-definable key, for easy, single-stroke operations.

So economical you can't afford to be without it.

At only \$79.95, SU4/4P can be yours. And that includes both a master and backup disk, 148 page manual, binder and full support. The more you know about your TRS-80, the more you'll want SU4/4P. The less you know about your TRS-80, the more you'll need SU4/4P.

So place your order today by calling or writing:

SUMMER ROMANCE

Learning to Love Model 4 Basic

When Tandy introduced the Model 4, many users who cut their teeth on Level II and Model III ROM Basic doubted that the 4's RAM-based Basic was anything but a giant step backward. You had to separate key words with spaces, you had no single-key editing commands, and you had fewer than 30K of free memory with which to work.

But first impressions aren't always good ones. After using the 4P, TRSDOS 6.X.X, and Model 4 Basic for over a year, I can say without reservation that this Basic is second to no other 8-bit version.

Let me explain what I've learned. I'll start by discussing how to get around Basic's limited memory, then look at Model 4 Basic's new and enhanced commands and functions.

Gimme Some Space, Man

Model 4 Basic lets you use variable names of up to 40 significant characters, and the names can include embedded key words. Thus, GRANDTOTAL, COMPANY.NAME\$, and COMPANY.ADDR\$ are all legitimate (the periods in the last two are undocumented but valid characters).

You pay a price for this versatility—you have to use spaces to delimit your key words. This, along with the longer variable names, means that you use more memory. But you'll find that in a year (or even in a week) your code will be easier to modify and maintain. For example, a line like this one requires no Remark statements to explain its logic:

```
10 IF SALES > BONUS.MIN THEN  
   BONUS.AMT = SALES*.05
```

If you write a long program, or one that needs lots of memory for variable storage, you might have to break it up into modules. Fortunately, this is easy, since Model 4 Basic includes complete and simple program chaining facilities. You can pass any or all variables and file buffer descriptions to another program, and use the Merge option to integrate code with a program in memory.

Program Listing 1 uses Model 4 Basic's chaining capabilities in a menu sequencing program, one that can pass control and preset constants or open files to either

a submenu or a processing program. Program Listing 2 shows a portion of a sample processing module, ENDDAY/MRG.

Lines 1000-59999 in the MAINMENU segment define the number of menu selections, the menu page title, and the selections proper. You would model subsequent submenus after these lines. The user function FNINV\$(X\$), defined in line 20, adds the leading and trailing video control codes needed for inverse video to its argument X\$. A While...Wend loop validates the selection, after which line 150 chains in the proper file (menu or process) for the selected function.

You can follow the implementation of the Chain command in line 150 as follows. First, the program specifies the Merge option. Basic reads program lines contained in the ASCII file MRG.PRG\$(n) from disk, encodes them, and then inserts them into the source code already in memory. This insertion follows the same rules as those used when you're writing a program: Basic will insert a line that does not exist and overwrites a line that does exist. The program starts with line 1000 of MRG.PRG\$(n), and passes all variables to the new program.

The Delete command specifies that Basic should delete lines 1000-59999 in the original program before it merges the new code. Both the start and end lines used as arguments for Delete must exist or you'll get an error; thus, the REM statement in line 59999 is only a place holder.

The ENDDAY/MRG module shows how Basic would break the menu loop (line 1000) for actual data processing. Another command (Chain or, at this point, Run) would return to the main menu.

The Erase command (line 30 in Listing 1) completely removes an array from memory as though you had never dimensioned it. Consider a sort routine that builds an index array from a direct- (new word for "random-") access file, sorts it, and then writes the array to an index file. You no longer need the index array left in memory, which can now limit the size of any new arrays and precipitate more frequent and time-consuming garbage collection. The simple command ERASE TMP.SORT\$ eliminates these nasty pos-

sibilities. One caveat—any array you want erased must exist or you'll get an error. You can use the Common statement in lieu of the All parameter in the Chain command. Basic passes only variables specified as its arguments to a chained program. This requires you to plan more carefully, but it does use memory most efficiently.

Some programmers are confused about the Common statement's function in a program to which they're chaining another. Common's only action is to pass variables to the chained program. Common in a chained program specifies variables you want to pass to subsequent code, and you don't need it to receive the first program's variables.

Quiz Time

Now that you know all about program chaining, here's a challenge for you. Using Alan Smith's Model 4 machine-language sort routine from the March 1985 *80 Micro* ("A Sort Story," p. 70), write a chainable sort routine that receives the sort array from your program and passes the sorted array back to the calling program (or on to another for further processing).

Here are some hints. In the calling program, include these lines:

```
COMMON SORT4ARRAY$( ).ARRAY.SIZE%.  
NEXT.PROG$.START.LINE%  
CHAIN "SORT4/BAS"
```

In the sort program, include these lines:

```
COMMON SORT4ARRAY$( ).ARRAY.SIZE%  
CHAIN NEXT.PROG$.START.LINE%
```

Notice that I specified the execution line for NEXT.PROG\$ as a variable (START.LINE%). You can do this, too, but the program must declare the variable used as an integer value, either with DEFINT or by

LOAD
80

System Requirements

Model 4/4P
64K RAM
Basic

If you haven't yet warmed up to TRSDOS 6.X.X Basic, read on. Clifford I. Knight shows you how it offers improvements in program structure and execution speed over Model I/III Basic.

Program Listing 1. MAINMENU/BAS.

```
1 ' *** MAINMENU/BAS ***
10 CLS:DEFINT A-Z:DIM MRG.PRG$(1)
20 DEF FNINV$(X$)=CHR$(16)+X$+CHR$(17)

90   PRINT SP$(20);FNINV$(STR$(CTR)+" ");" - ";
100  READ SELCT$:PRINT SELCT$:PRINT
110 WEND:PRINT@(22,10),"Enter Selection... ";:I=0
120 WHILE I<1 OR I>MAX.SLCT
130   I=VAL(INPUT$(1))
140 WEND:CLS
150 CHAIN MERGE MRG.PRG$(I),1000,ALL,DELETE 1000-59999
999 ' *** MAIN/MRG *** - save in ASCII format
1000 GOTO 20 ' entry for a menu module
59000 DATA 3,"MAIN MENU - XYZ Company"
59010 DATA "OEMENU/MRG","Order Entry System Menu"
59020 DATA "INVMNU/MRG","Inventory Control System Menu"
59030 DATA "ENDDAY/MRG","Start End of Day Sequence"
59999 REM
```

End

Program Listing 2. ENDDAY/MRG.

```
1 ' *** ENDDAY/MRG *** - save in ASCII
1000 ' end of day code goes here
2000 '...
50000 CHAIN MERGE "MAIN/MRG",1000,ALL,DELETE 1000-59999
59999 REM
```

End

Program Listing 3. Input routine without While...Wend.

```
10 I$=INPUT$(1)
20 IF I$=CHR$(13) THEN GOTO ??? (70)
30 IF I$<" " THEN GOTO 10
40 IN.LIN$=IN.LIN$+I$
50 PRINT I$;
60 GOTO 10
70 '... code continues here
```

End

Program Listing 4. Input routine with While...Wend.

```
10 WHILE I$<>CHR$(13)
20   I$=INPUT$(1)
30   WHILE I$>" "
40     IN.LIN$=IN.LIN$+I$
50     PRINT I$;
60     I$=""
70   WEND
80 WEND:I$=""
90 '... code continues here
```

End

using the type specifier "%." Unfortunately, you can't pass deletion line numbers as variables.

I'll leave the discussion of chaining with these additional points. First, contrary to what the Model 4 manual implies, when you're not using the merge option, you don't need to save the program you've chained in ASCII format.

Second, when you use the merge option, you can't necessarily preserve user-defined functions. Basic stores and references user functions at their original location in the source code. Should the delete option remove the line containing the function definition, or if a merged program overwrites the definition line, that function ceases to exist and you'll get an error condition.

While...Wend

Listing 1 uses While...Wend, a structured programming technique long available in other languages. It doesn't do anything you can't do in Model III Basic, but it lets you write code that's easier to maintain.

Examine the Input routines in Program Listings 3 and 4. In the first example, I had to complete the GOTO in line 20 after writing the code. Using While...Wend in Listing 4, I didn't. When you use a While...Wend loop, something must alter the value of the control variable (I\$ in Listing 4), or the program won't break the loop. Line 60 does this by assigning the null string to I\$. In line 80, Basic again clears I\$ so that the program can reenter the routine. You can nest While...Wend loops (one inside the other as shown in Listing 4) to any number of levels.

I used Basic's new input function, INPUT\$, in Listings 3 and 4. It replaces INKEY\$; for example, the Model III code in Listing 3 might be 10 I\$=INKEY\$:IF I\$="" THEN 10. The syntax is INPUT\$(n,b), where "n" is the number of characters (no more, no less) from a file assigned to buffer "b" or from the keyboard if you don't specify a buffer. Model 4 Basic doesn't echo keyboard input to the screen.

It Takes Coordination

Microsoft altered the Model 4's PRINT@ function so you can specify screen locations as row and column coordinates; the syntax is PRINT@(r,c). This is an easier way than that Model III Basic uses to set up display positions.

You can still specify PRINT@ locations as an offset from the start of video memory, which has an advantage: You can store calculated or premapped cursor locations in single-integer variables (with a value of zero to 1919) instead of two-integer variables needed to store row/column designators.

New also is the ROW(x) function.

Powerful Programming Tools At Bargain Prices

C compiler

for the model 1 or 3 using TRSDOS, LDOS, NEWDOS, DOSPLUS, or MULTIDOS; includes full screen text editor and advanced development package

List Price ~~\$250.00~~
Sale Price \$89.95

Multi-Basic compiler

for the model 1 or 3, or 4 using TRSDOS, LDOS, NEWDOS, DOSPLUS, or MULTIDOS; includes full screen text editor and advanced development package

List Price ~~\$250.00~~
Sale Price \$89.95

This is a full K & R standard implementation of C that includes a Unix compatible function library. The package also includes a 450 page manual with a tutorial on using the C language. If you've been wanting to learn C, this is the package you need.

Features Include

char	8 bits	initializers
short	8 bits	typedef
int	16 bits	static
unsigned	16 bits	auto
long	32 bits	extern
float	32 bits	struct/bit fields
double	64 bits	union

Execution speed on the Model 3 for 10 iterations of the prime number program published in Byte, Jan 83, page 284.

LC Compiler	105 secs.
Alcor C	78 secs.

Special Bonus

Buy one version for \$89.95 and get the version for the other model for only \$21.

Multi-Basic is a TRS-80 BASIC compatible compiler. The Model 4 version supports everything in the TRSDOS 6 BASIC interpreter except the COMMON statement. The same support is provided in the Model 1 and 3 versions so programs are portable. The CMD statement is the only statement from the Model 1 and 3 BASIC interpreters that is not supported.

Multi-Basic also supports advanced language features like multi-line procedures and functions, recursion, and dynamic string management (no long pauses for garbage collection).

Execution speed on the model 3 for 10 iterations of the prime number program published in Byte, Jan 83, page 286.

BASIC Interpreter	4570 secs.
Multi-Basic	89 secs.

Special Bonus

Buy one version for \$89.95 and get versions for the other two models for only \$21 each.

140 INPUT "Type it again ";N$
150 POKE (FLAGS%+CLK.PTR%56),FNTGL%(CLK.PTR%)
200 PRINT "Clock OFF":END
60000 FOR J%=1 TO 6:READ USER%(J%):NEXT
60010 FLAGS%=0:GET.FLG%=VARPTR(USER%(1))
60020 CALL GET.FLG% (FLAGS%):RETURN
60100 DATA 16101,-4251,-6659,-7743,9073,-13968
```

End

which returns the current cursor row number (zero to 23). You can use Row with the familiar POS(x) to get the cursor's row/column coordinates. A slight problem with POS is that it returns a value of 1-80; PRINT@ positions are specified as zero to 79.

Many Basic commands (such as Row and POS) require a dummy argument; for example, the "x" in the above examples. This satisfies Basic's function interpretation routine's syntax requirements. They are place-holders, preventing the parsing routine from labeling a function with no argument as a syntax error.

Swap (SWAP v1,v2) is a useful new command that, as its name implies, interchanges the values of its arguments. The parameters must be variables, not constants, and must be identical types. An obvious use of Swap would be in a Basic sort routine. You can also use it to toggle a string or numeric variable between two possible values, as you'll see in an example to follow.

Internal string manipulation has been greatly streamlined in the new Basic through the use of dynamic string memory allocation and improved assignment

techniques. No longer do you need to reserve string storage space with the Clear statement, which is now modified to set Basic's top-of-memory pointer. You can use a second Clear argument to set Basic's stack size. You would need this only in extraordinary program situations. Clear alone resets all variables as it does in Model III Basic.

Microsoft modified FRE(x%) to return the amount of free memory, the same as MEM does. With dynamic string space allocation, its old Model III function becomes meaningless in Model 4 Basic. The Model 4 manual states that you can have a dummy parameter of any type and that executing this function forces garbage collection and returns the amount of free memory. In fact, garbage collection occurs only if you use a string variable as the dummy.

Frequent use of FRE can minimize the delays of garbage collection by reducing the number of orphaned strings at each purge. You'll notice the FRE delay least if you use it immediately after displaying a screen of data, or just after an input prompt when the user is busy reading or formulating a response.

Restore(n) has been modified to let you reuse the data in a specific line of code. This is an improvement over previous Basics, in which Restore reestablishes access to all data.

Sound (SOUND t,d) is a new Model 4 Basic command. The function generates a tone of frequency "t" and duration "d" via the 4's internal speaker. This is a tone more suited to games and as an alarm than for music.

The Model 4 interpreter offers a new output command, WRITE# (WRITE# b,data. . .), to output to the file associated with buffer "b" the data contained in a data list, properly delimited with commas and quotes as sequential files require. If you don't specify "#" and buffer number "b," Write sends data to the screen, a useful debugging aid, since you'll see even a string of spaces (or leading/trailing spaces).

Microsoft replaced the Model III TIME\$ function with DATE\$ and TIME\$. You thus no longer need the cumbersome LEFT\$(TIME\$,8) and RIGHT\$(TIME\$,8) commands to separate the date and time.

Other "convenience" commands include Option Base and SPACE\$. The first lets you specify either subscript zero or 1 to describe the first element of an array. By specifying a base option of 1, the element subscripts of an array will correspond to the record numbers of a direct-access disk file.

SPACE\$(SPACE\$(n)) builds a string of "n" spaces in the same manner as STRING\$(n,32). A related command, SPC(n), is similar to TAB(n) except that it moves the print position to the current column plus "n" spaces. Tab moves to absolute column "n."

You can convert numeric values to hexadecimal (base 16) or octal (base 8) string representations with HEX\$(n) and OCT\$(n). If you program in Assembly language, you'll appreciate the HEX\$ function; otherwise, you might never need it.

Program Listing 5 is a simple error-message-handling routine using some of the new commands and functions discussed.

The program enters the subroutine at line 60000. The subroutine prints the first portion of the error message and then calculates the cursor position for the blinking message (line 60010). By repeatedly setting the variable TMR equal to the seconds counter of TIME\$, the While..Wend loop toggles WARN1\$ and WARN2\$ to blink the message once per second. SOUND 3,0 in line 60080 alerts the operator.

What Else Is New?

Model 4 Basic incorporates a new method of interfacing to machine-language routines. Unlike the USRn statement of the Model III, the Call statement (CALL a(v1,v2,v3,. . .)) lets you pass more

TRS-80™ - Tandy - IBM Personal Computer - MS-DOS - CP/M

SMALL BUSINESS ACCOUNTING WITH PAYROLL \$79.95

Based on the **Dome Bookkeeping Record #612**, this program handles income, expenditures, and payroll for a small business. Complete ledgers are maintained for income and expenses on a monthly basis. The program computes monthly, through last month, and year-to-date summaries. The payroll section can handle up to 99 employees. Paychecks with up to six deductions can be entered whenever desired (weekly, monthly, etc.). The program can print both payroll and expense checks. Quarterly and year-to-date payroll summaries can be computed for one or all employees.

HOME BUDGET and CHECKBOOK ANALYST \$59.95

A complete checkbook program together with budgeting, income and expense analysis, comparisons, and projections. First, it is a complete checking program: enter and print checks, enter deposits, and compute your current checking balance. The program also handles non-check expenses and income. It computes monthly and year-to-date income and expense summaries, and projections for the year based on data through a known month. Monthly expenses can be compared to a pre-established budget.

MAILING LIST \$69.95

Maintain mailing lists of up to as many names as you can fit on a standard diskette (1,250 for TRSDOS, 2,500 for MS-DOS). Add, change, delete, or find names. Sort according to data in **any** field. Print labels in 1, 2, 3, or 4 columns with adjustable tabs.

TRS-80™ Models 1, 3, and 4

TYPITALL Word Processor \$129.95 TYPITALL with Spelling Checker \$179.95

The most powerful word processor for the TRS-80s. TYPITALL is upward compatible with SCRIPSIT — it reads your old SCRIPSIT files and uses the formatting and cursor movement commands you are already familiar with. But it is a completely new word processor with so many advanced features that we can't even mention all of them here. You'll wonder why other word processors don't have some of these features.

- Send **any** control or graphic/special character to the printer
- Print the formatted text **on the screen** before going to the printer.
- Send formatted text to a **disk file** for later printing
- **Merge** data from a file during printing. Names, addresses, and other text can be inserted during printing. No need for a separate program for "mail merge" capabilities!
- Print while editing (spooling).
- Assign **any sequence of keystrokes** to a **single** control key
- Call up to **16 help screens** at any time.
- **Move cursor** forwards or backwards by character, word, line, or page.
- **Reenter** the program with **all text intact if you accidentally exit** without saving the text
- Optional spelling checker comes with 29,500 word dictionary. Verify a 3,500 word document in **less than two minutes**.
- True Model 4 (80 x 24 display, TRSDOS 6) and Model I/III versions.

SYSTEM DIAGNOSTIC \$99.95

Is your computer working correctly? **Are you sure?** Find out for certain with System Diagnostic, which has complete tests for every component of your TRS-80 Model 1, 3, or 4.

ROM: checksum test **RAM:** three tests including every location and data value **Video display:** character generator, video RAM, video signal. **Keyboard:** every key contact tested **Line printer:** character tests with adjustable platen length **Cassette recorder:** read, write, verify data. **Disk drives:** disk controller, drive select, track seek, read sectors, formatting, read/write/verify data with or without erasing, disk drive timer, disk head cleaner. Single or double density, 1-99 tracks **RS-232-C Interface:** connector fault, data transmission, framing, data loop, baud rate generator.

SMART TERMINAL \$74.95

The **intelligent** communication program! Use your TRS-80 to communicate with other computers, bulletin boards, information services, time sharing, or for data transmission. **Memory buffer** holds data to be transmitted or received. **Automatic transmission** of data from buffer. **Automatic storage** of incoming data. **Character translations.** Data files compatible with word processors and BASIC programs. True BREAK key

TRS-80™ MODEL III ASSEMBLY LANGUAGE book \$16.95

A complete course on assembly language, written for the **beginner**. Contents include: the Z80 instruction set; TRS-80™ Model III ROM and RAM; Using the Editor/Assembler; Reading, printing and moving data, arithmetic operations, floating-point and BCD numbers; logical and bit operations; cassette input and output, USR subroutines in BASIC, RS-232-C data communication, disk input and output, the TRSDOS 1.3 disk operating system.

ASSEMBLY LANGUAGE MONITOR #5 \$22.95

TRS-80™ MODEL III ASSEMBLY LANGUAGE book and MONITOR #5 \$29.95

A comprehensive machine language monitor and debugging program. **Display** memory in ASCII or hexadecimal format. **Disassemble** memory to show machine language commands. **Move and compare** blocks. **Search** through memory for different values. **Modify** memory in different ways. **Relocate** machine language programs. **Read and write** cassette tapes of machine language programs. **Unload** programs in low RAM on disk. **Print** output optionally on video display or line printer. **Save and load** disk files. **Input and output of disk sectors**, bypassing disk operating system. **Complete debugging package**, including setting and displaying registers, single stepping through machine instructions, setting breakpoints, and executing machine language operations.

than one parameter to (and from) user routines. When the program enters your Assembly-language subroutine at address "a," the HL and DE registers will hold the VARPTR addresses of variables used as parameters 1 and 2 in the Call statement. If you specified only three parameters, BC holds the VARPTR value for parameter 3. If you're passing more than three values, BC points to a table of VARPTRs for the remaining parameters. If your machine-language routine saves these pointers, you can pass data back to Basic by stuffing the proper information into the pointers.

An example of multiple value passing could easily take all the space I have here, but I'll use Call in an example later to receive an integer value.

The old Renumber command Name now renames files from Basic. The RENUM command rennumbers Basic source code. All line references in GOTOS and GOSUBS are renumbered, but you can't renumber a block of lines in the middle of a program.

"WIDTH (LPRINT) n" lets you set the line width of either the video display or printer output (if you use the LPRINT option). I can't see a use for the latter: the forms filter does this and more. Nor can I see much use for its video function. But it's there, so I thought I'd mention it.

Another new command, Wait, suspends program execution until Basic inputs a specific bit pattern from whichever one of the Z80's 256 input ports you specify. This is a convenience command; it does nothing that you can't do with a While...Wend loop and the INP(n) function. I took a quick look at the Model 4's port assignments and can't see any use for this in a standard system.

LPOS(x) returns the column number coinciding with where Basic expects your printer will print the next character. I say "expects," because Basic has counted

The ERRS\$ function returns a string containing the error number and a descriptive message.

each character sent to the printer since the last carriage return to arrive at this value. Many characters output to a printer directly control print head movement, but Basic counts each as a single character. Keep this in mind if you use this function.

You won't find the Level II and Model III CMD functions in Model 4 Basic, but you can duplicate most of them fairly easily. I've already mentioned the sort routine published in 80 Micro to take the place of CMD"O". CMD"X", the cross reference function, is not available and sorely missed by some programmers. (80 Micro has a Model 4 cross-reference program slated for publication later this year.—Eds.)

Model 4 Basic has a function, ERRS\$, that is similar to CMD"E". It returns a string containing the error number and a descriptive message. TRSDOS's error messages are often more informative than Basic's; for instance, should you attempt to access a drive without a disk, Basic gives you a "Bad file name" error, while the DOS gives you "Drive not ready."

You can duplicate CMD"R" and CMD"T"'s control of the clock display with SYSTEM "TIME(CLOCK=Y)". Unfortunately, the DOS Time command displays the time and a carriage return at the last cursor position, marring the display.

The routine in Program Listing 6 overcomes this problem by loading and executing a 12-byte machine-language subroutine that puts the address of the DOS's system flag's storage area into the variable FLAGS%. From this base address, the 4 calculates two pointers, one to the keyboard flag byte (CAP.PTR%) and another to the display status byte (CLK.PTR%). By POKEing values obtained from a user function FNTGL%, you can toggle both the clock display and the CAPS lock on or off.

This routine also introduces two new arithmetic operators and one new logical operator. MOD provides the modulus function; X MOD Y returns the remainder of X divided by Y.

The backslash character provides an integer division function; that is, X\Y yields the integer portion of the quotient.

In line 20, the integer variable CAP.PTR% has the offset from FLAGS% assigned to the high byte (10*256), and the bit number of the CAPS flag assigned to its low byte. The user function FNTGL% decodes this integer variable into the offset and bit number using the integer division and MOD operators.

The exclusive OR logical (XOR), a new logical operator, also appears in the user function, and toggles the flag bit.

Writing about Model 4 Basic's graphics commands is simple—there aren't any. Model 4 Basic doesn't include the Model III's Set, Reset, and Point commands. However, the Model 4 character generator can produce the same (modified somewhat for the new screen format) 64 graphics characters as the earlier machines, so by carefully building strings with CHR\$(n) you can create graphics displays.

You can add Set, Reset, and Point with Mark Goodwin's machine-language subroutines published in the April 1984 issue of 80 Micro ("Restored Art," p. 157) or

WINDOWPAD utility — The utility that started it all! Still just \$20.00 + \$1.25 P&H. Call or Write **EN FLEUR CORP.** 2494 SUN VALLEY CIRCLE, SILVER SPRING MD 20906

with Alan Smith's Basic subroutine in this issue ("Upgraded Graphics," p. 76). If you're really into graphics, look up "Clear-Cut Trends" in the April 1985 issue (p. 40). It contains programs for the optional high-resolution video board with 640- by 240-pixel resolution.

Model 4 Basic includes many internal improvements to reduce source code length and increase execution speed. One such technique is a better way of storing numeric constants. When you type in a program, the computer converts numeric constants to the same packed format in which it stores variables as it encodes each line. To see what I mean, type in the following:

```
10 A = 123456
20 B = 1234567890123456
```

Now list it. See the "I" and "N" characters that the interpreter appended to your constants? A memory dump of this code shows that Basic stores the first constant in 5-byte single-precision format (1 byte less than the same code saved in ASCII) and that it stores the second value as an 8-byte double-precision value (saving 8 bytes). Since Basic doesn't have to decode constants each time the executing program meets one, the program runs faster.

Conclusions

Model 4 Basic is a big improvement over the earlier versions. The chain capability, in conjunction with Erase and the improved Restore statement, means that your programs' lengths are limited only by disk space. While . . . Wend removes the confusion of GOTO statements, and new techniques of dynamic string allocation and constant storage improve overall execution speed.

If you're an old Model I or III programmer who hasn't explored Model 4 Basic yet, get cracking—you'll soon give up your old ways. ■

Sifting Through GW-Basic

by Dave Rowell

**A programmer's
guide to the nuances
of Model 1000 Basic.**

I've been experimenting with the Tandy 1000 version of GW-Basic, and I'm pleased with the capabilities it offers. In particular, its event-trapping, graphics, and sound statements represent improvements over earlier versions of GW-Basic, even the Tandy 2000's. I'll discuss some

of the new features in detail, using short programs to illustrate what you can do with them.

Besides these welcome enhancements, you'll find subtle functional changes in several familiar Basic statements, changes that can cause you frustration if

you're used to Model III/4 Basic. I'll point out a few. GW-Basic also lacks some Model III features you'll miss, like CMD"" and your favorite system POKEs.

Some Pitfalls

Before I get to the new stuff, I'll discuss some snags you might encounter if you're an old Model III Basic programmer. Like Model 4 Basic, GW requires that you accompany each If statement with a Then statement except with GOTOs. And you can't have Next statements in conditional phrases, like this:

```
90 REM ** The Model III way
100 IF A > 550 THEN FL = 1 : NEXT ELSE
  FL = 0
110 PRINT "The line above causes a syntax error in GW."
120 NEXT
```

Instead, replace Next with a GOTO pointing to the one Next statement allowed each For:

```
90 REM ** The GW equivalent
100 IF A > 550 THEN FL = 1 : GOTO 120 ELSE
  FL = 0
110 PRINT "One and only one Next for each For"
120 NEXT
```

Model III Basic executes any For...Next loop at least once. Model 4 Basic and GW-Basic skip over a loop if the counter will never enter the specified range, as is the case here:

```
100 FOR I = 1 TO 5 STEP - 1
110 PRINT "This will print once on a Model III."
120 PRINT "but never on a Model 4 or Tandy 1000."
130 NEXT
```

Such a loop could result from using variables within the For range specifiers or in the Step statement. If you do use variables in the loop, and need it to execute at least once, examine your logic carefully.

If you nest For...Next loops (or GOSUBs) to the nth degree, your program might abort because it has run out of stack space. Fortunately, you can increase available stack space from the default (768 bytes or 1/4 of usable memory) with the Clear statement. Clear doesn't allocate string space on the Model 1000 as it does on the Model III; that's done dynamically. Clear also provides options for you to set aside space in high memory for machine-language subroutines or increase video storage space for the more greedy graphics modes.

Misunderstanding the Input statement can really cause problems. In Model III Basic, you can assign a default value to a variable, then let the program user change that value with an Input statement or leave it as is by pressing only the enter key:

```
100 X = 100 : PRINT "Correction factor is 100."
110 INPUT "Type in new value, or press enter to leave unchanged.": X
```

Do this on an MS-DOS machine and you'll get erroneous results in the calculations that follow. GW-Basic maliciously nulls variables if you press only the enter key in response to an Input prompt.

Here's a GW-Basic version of the Model III input routine above:

```
100 X = 100 : PRINT "Correction factor is 100."
110 INPUT "Type in new value, or press enter to leave unchanged.": X
120 IF VAL(X) = 0 AND X <> "0" AND X <> "" THEN GOTO 110
130 IF X <> "" THEN X = VAL(X)
```

Using a string instead of a numeric Input statement in line 110 lets the program determine if you input a zero or just pressed the enter key. Line 120 makes sure you've entered a number.

Random Rules

Microsoft tweaked GW's RND() function to make it predictable and repeatable, if you desire. If its argument is zero, RND repeats the pseudo-random number it generated previously. Any other argument, or no argument, produces a number between zero and 1 (the case in Model III Basic with an argument of zero).

The Model III RND() function can produce a random number between 1 and integer X if you use X as its argument. It's not that easy in GW-Basic:

```
10 P = INT(RND * X) + 1 'pseudo-random number between 1 and X
```

If you write programs for several Tandy machines, the following algorithm gives you equivalent results on the Models I, III, 4, 1000, and 2000:

```
10 P = INT(RND(0.1) * X) + 1
```

The Models I and III truncate RND's argument to zero, the 4 rounds it, and MS-DOS machines accept it as nonzero, so all Basics produce a "random" number between 1 and X.

The Model III Random function reseeds the random number generator so that a program produces a different set of pseudo-random numbers each time you run it. The Randomize function is GW's replacement for Random, and it takes an argument, as in RANDOMIZE 232. To help in program testing, this function repeatedly produces the same series of random numbers for a given argument. To make a program generate a different set of numbers each time you run it, use the Timer function as an argument. Timer returns the number of seconds since midnight on the system clock:

```
10 RANDOMIZE TIMER 'Reseed with Timer
```

All Clear

MS-DOS machines have a 15-character type-ahead keyboard buffer. This is usually a convenience, but not when your program requires paging a series of text screens by key presses. A few misplaced keystrokes, or pressing a key long enough to start key repeat before the paging prompt appears, sends your information flashing past faster than you can speed-read.

You can avoid the problem by clearing the keyboard buffer before the input routine that starts each text page. Use an INKEY\$ loop with 15 repetitions, or better

yet, INKEY\$ in a While...Wend loop. Here are examples of both methods:

```
100 FOR I = 1 TO 15 : X$ = INKEY$ : NEXT I
'Clear buffer
110 PRINT "Press any key to see next page."
120 IF INKEY$ = "" THEN GOTO 120 'Wait for key press
130 REM ** Show next text page
```

```
100 WHILE INKEY$ <> "" : WEND 'Clear buffer
110 PRINT "Press key for next page."
120 WHILE INKEY$ = "" : WEND 'Wait for key press
130 REM ** Show next screen
```

On the IBM PC, you can POKE directly into the circular keyboard buffer, setting the input queue's tail and head to the same location. The DOS input routine then reads the buffer as empty, a trick that also works on highly IBM PC-compatible machines like the Tandy 1000. Replace line 100 in the above routine with:

```
100 DEF SEG = 0 'Set to bottom 64K segment
101 POKE 1050, PEEK(1052) 'Input queue head equals tail
102 DEF SEG 'Restore Basic memory segment
```

MS-DOS machines are faster than Z80-based micros; Basic on the 1000 runs about four times faster than on a Model III. If you use For...Next loops as time delay routines, you'll have to adjust your counter values accordingly.

More accurate than a For...Next Loop, and easier to set, is a subroutine containing GW-Basic's Timer function:

```
1010 REM ** Time delay subroutine: set
  TM = number of seconds before calling.
1020 TM1 = TIMER : TM2 = TIMER 'Initialize subroutine timers
1030 WHILE TM > TM2 - TM1 'Test elapsed time
1040 TM2 = TIMER 'Get current time
1050 WEND 'End While loop
1060 RETURN
```

The subroutine stores the initial time when it enters the loop in TM1, then keeps sampling the present time until the number of seconds passed in variable TM has elapsed.

Miscellany

Several minor differences between Model III and GW-Basic are worth mentioning before I move on to GW's new features. The exponentiation sign is the caret symbol (shift-6), not the up arrow (printed as the left bracket).

Cassette commands no longer exist. GW functions that convert their arguments to integers round them to the nearest integer, like Model 4 Basic; they don't truncate them as does Model III Basic. And three functions, CINT, FIX, and INT, change real numbers to integer values. I have to look them up each time I use one. You'd better, too.

If you've done any GW-Basic programming at all, you know you must surround key words by spaces: DEFUSR is two words. This increases program size. If you have a 128K 1000, believe it or not, you may find your programming space al-

Program Listing 1. Example of the On Timer event trap.

```
10 ON TIMER(111) GOSUB 1000 'Every five seconds when active
.

70 DRAW DR$
80 GOTO 40
```

End

ready limited. Graphics memory takes at least 16K and Basic is in RAM, too. You can break up large programs and string the pieces together with the Chain and Common statements, but you should get a memory upgrade if you can afford it.

On Event-Trapping

Event-trapping is one of GW-Basic's fortes. In addition to the On Error trap found in Models III and 4 Basics, GW has traps for RS-232 input, light pen activity, joystick and mouse button presses, special key input, the condition of the music buffer, and a countdown timer.

Event-trapping lets you set up interrupt procedures for unpredictable events, then forget about them while your program does other things. When one of these events occurs, the program stops where it is, executes a subroutine set up for that event, and returns to what it was doing, without losing stride.

You can turn on or off, or temporarily suspend, trapping for a particular event. The Stop parameter suspends trapping during critical procedures, but keeps track of events and takes appropriate action when trapping resumes. Program Listing 1 is a demonstration of the On Timer event trap; I'll give examples of other event traps later on.

The syntax of event traps is fairly uniform. First you specify a subroutine with the On statement, as in line 10 of Listing 1. Trapping starts when an On statement executes (Line 100) and ends with an Off statement (Line 150).

The Timer trap's argument, 111 in this case, specifies a time period during which you have the event trap active. According to the manual, it should be 111 seconds, but I found that 111 produces a five-second period between traps. I programmed the On Timer() trap as a beeper. When it's active, the program drops to the Timer subroutine every five seconds, where it executes the BEEP command. In the example, the beeper notifies you that a long processing task is finished and needs attention.

Display It Again, Sam

Screen display is where the TRSDOS Basic programmer will feel least at home. You can't POKE graphics characters to the screen easily with GW-Basic, but you shouldn't have to. Here's where you'll find the greatest number of new commands, commands that plot points and display text, change colors (up to 16) or graphics resolution (three levels), draw simple or complex shapes, even define the screen window's dimensions.

It's daunting to take all this in at first; however the examples that follow show not only how to use these features, but why you'd want to. The listings are short, and I suggest typing them in.

Hyperspace, Program Listing 2, is an entertainment program from the cheap

WE HAVE EVERYTHING YOU NEED FOR COMPUTER CARE AND CONVENIENCE

Standby Power System

695⁰⁰

BPS 400. Protect your home or office computer with a backup power supply. The BPS 400 provides more than 10 minutes of full power operation (400 VA) after an electrical failure. During normal operation, it works as a power line filter. Not for equipment or drives using AC motors: Model II, Disk Expansion Bay, or 8-Meg Hard Disk Drive. 6 x 10³/₄ x 12¹/₂". U.L. listed. 26-1189 695.00

Automatic Power Strip

69⁹⁵

SW-301. Activates peripherals when you turn on your computer (not for Model I or Color Computer). Features 2-stage surge protection. U.L. listed. 26-1429 69.95

Power Line Filter Protection

49⁹⁵

Limits AC power line interference to the Model I and Color Computer or any sensitive computer equipment. Single switch will control eight outlets. Includes surge protection. U.L. listed. 26-1244 49.95

Head Cleaner Kit

Cleans drive heads safely and easily. With disk, solution and instructions. 5¹/₄" Drive Kit. 26-408 7.95
8" Drive Kit. 26-4957 8.95

Anti-Static Mat

89⁹⁵

Chair not included

Guard against data loss. Continuously drains static charges that can damage your computer. Durable vinyl. 45 x 53". 26-1351 89.95

Anti-Static Spray

5⁹⁵

Use on equipment, screen or carpet. Helps eliminate problem-causing static electricity. Long-lasting and safe. 26-515 5.95

Typing Easel

Adjustable (8³/₄" to 13⁷/₈") T-bar and friction pad keeps books and other material open end in place. Folding lags for easy storage. 73-2003 17.95

Screen Cleaner

Reduce eye strain. Keep your screen bright and easy to read. Helps prevent dirt build-up on screen. With 50 pre-moistened wipes and lint-free cloth. 26-1318 6.95

Programming Aids

Printview Ruler. 26-1313 3.50
Flowchart Template. Helps you draw legible flowcharts quickly and easily. 26-1312 3.95

Computer Books

Understanding Computer Science. 62-1383 3.95
Computer Programming in BASIC. 62-2015 2.95
BASIC Computer Language. Self-paced format for Level I BASIC. 62-2016 5.95
Dictionary of Microcomputer Terms. 62-1392 2.79

SYSTEM FURNITURE FOR HOME OR OFFICE WORKSTATIONS

Terminal Stand
A 19995

Deluxe Workstation
B 27995

Printer Stand
C 14995

A Deluxe Terminal Stand. Perfect for computer or terminal. Locking casters and large 30 x 30" tabletop adjustable at 26", 27" or 28". Easy to assemble.
26-4306 199.95

B Deluxe Workstation. This sturdy and spacious desk has pre-cut cable slots, rounded edges, and a scratch resistant 48 x 30" top.
26-4303 279.95
Desk Drawer. Mounts on left or

right of workstation (above).
26-4304 139.95
C Sturdy Printer Stand. Bottom paper feed slot. With wire basket.

- Refill Fluid and Pad.**
- 26-1322 5.95

thrills bin. It centers a group of concentric ovals on the screen using all 15 colors, then rapidly changes the color assignments to give the illusion of movement. It demonstrates the basics of using graphics commands, and also shows one of GW's more advanced features.

Start with the basics. Line 10 clears the screen, including the 25th line. The CLS command doesn't touch the 25th line, so as to leave intact the function key assignment display. You can't print text on that line, but you can put graphics there. Unfortunately, there's no simple way to clear graphics from the 25th line. The Key On : Key Off in line 10 flashes the key assignments momentarily. Your alternatives are to change to another screen mode and back with the Screen statement (jarring) or draw a filled black box in that area with the Line statement (slow).

The Screen statement in line 30 sets the display to mode 5 (medium resolution, 16 colors). Modes 4-6 require more RAM than the 16K default, so the Clear statement in line 20 sets aside the necessary 32K. The screen dimensions in medium resolution are 320 by 200 pixels, with the origin in the upper left-hand corner. Most graphics commands use this coordinate system.

The two Line statements in line 70 draw a vertical and a horizontal blue line centered on the display. The PRESET statement resets the center dot to black.

Lines 90-120 draw a series of concentric ovals centered on the screen with a For...Next loop that increases the radius *l* in the Circle statement by 10 each iteration. The variable CLR in line 100 cycles through all color values except black (1-15), so that each ellipse is a different color. The Circle statement's last parameter sets the aspect ratio of the ellipse; the default value, 1, makes a circle. You can draw large circles that only partially fit on the screen.

I've avoided mentioning the integer array *A* and the Palette Using statement, the trick that changes the colors via the loop in lines 130-180. When you specify a color for any of the graphics functions (e.g., the *l* in the Line statement), you're actually specifying the color assigned to the palette position with that number. A palette position's default color is its number: Palette position 1 is normally blue, color 1. You can change assigned colors with the Palette statement. The statement Palette 1,4 assigns red to palette position 1, and instantly changes any graphics in color 1 from blue to red.

The program's illusion of movement comes from sudden changes in color assignment, which the more powerful Palette Using statement accomplishes. You change all color assignments at once by specifying an integer array holding the new values. You specify an element in the array and the program assigns that value to palette position zero. The other palette colors are assigned sequentially from the array. In Listing 2, the array holds the colors 1-15 in

Program Listing 5. Illustration of graphics windows.

```

End

Photo. Screen windows using the Window and View statements.

sequential order twice (line 60).

The Palette Using statement cycles through this array in the loop in descending order, so the colored ellipses seem to move toward you. Line 140 temporarily keeps the color assigned to the background as black (color zero). Line 160 restores the array to its original condition.

Sketching Session

Perhaps GW-Basic's most sophisticated graphics feature is the Draw statement, which takes a string argument. In the string, you can specify a series of Logo-like cursor movement functions, or even refer to a substring that's defined to do something like draw a box. Program Listing 3, a screen sketch program, illustrates some of these abilities, and also uses event-trapping on the arrow and function keys. It

runs in the high-resolution, four-color mode 6.

Most of the program sets up event-trapping for function keys 1-3 (lines 130-160), function keys 11 and 12 (lines 170 and 180), and the four arrow keys (lines 190-230). The loops in lines 160 and 230 turn on event-trapping for the keys once you assign them subroutines. After doing this, the program spends its time in the loop in lines 250-320, unless you press one of the trapped keys.

The central loop executes a Draw statement with argument DR\$ (line 310) over and over. String DR\$ has the initial value of "M320,100", a Move command that puts a dot at position 320,100, the screen's center.

Pressing one of the arrow keys shunts the program to the appropriate subrou-

tine, where it changes part of DR\$ to a directional Move argument, either U1, D1, L1, or R1. These arguments specify one-increment moves, drawing as the cursor moves, either up, down, left, or right.

The subroutines return to the spot where the Interrupt occurred. Once you press a directional arrow, the cursor never stops drawing; you just control the direction. Lines 250-290 check the cursor position (Point), and reverse direction if the cursor is going offscreen.

Function keys F1-F3 change the part of DR\$ that determines the line's color. Screen mode 6 has four colors, one of which is black, the background. The argument "C1" sets the cursor color to 1, the default of which is cyan. F11 clears the screen, after which the cursor starts at midscreen, the Draw command's default.

F12 stops the program, calling on the CLS subroutine, then resetting the screen mode to zero and the screen width to 80 columns.

You can use Draw to create some shapes that you can't get with Circle or Line, or that you can't easily plot with a function. Program Listing 4 draws a purple spiral, like a Nautilus shell. The Draw command's argument sets the color (C2), moves up 1 (U1), then changes the direction of "up" in degrees. "TA180" would cause up to be down. Line 40 changes the angle with each move. If the angle changes by the same amount each time, you get a perfect circle. In this case, the amount of change increases slightly with each repetition, so the circle tightens into a spiral. The degree of spiral depends on the variable C's value.

Screen Windows

Even better than Draw are the View and Window statements, which let you define an active area of the screen and scale its dimensions. View defines a rectangular area of the screen, a viewport, to which it confines all graphics activity. Even the CLS statement clears only the viewport.

The Window statement lets you scale the current viewport's coordinate system. You can scale the screen to fit the range of values of the data you're graphing.

Program Listing 5 demonstrates the powers of View and Window. It defines a coordinate system and plots the same hyperbolic curve in three different-sized viewports using that coordinate system (see the Photo). Line 20 clears adequate graphics space in RAM, then sets hi-res mode 6.

The Window statement in line 30 defines the window as having the same coordinate dimensions it normally would have in mode 6. Since the Window statement has no Screen parameter, the X coordinate goes positive up, which is what you'd want for plotting mathematical functions. If you specify the Screen parameter, the X axis is positive down, as the screen coordinates usually are.

The subroutine plots a magenta curve from the origin in the lower left-hand cor-

ner to the upper right-hand corner using the PSET statement. The program first plots the curve on the default viewport, the whole screen, then defines a second viewport in line 50.

Along with the coordinates that define size and location, I specified a white background with a cyan border for the second window. The white fills rather slowly and covers part of the first curve. If I hadn't specified a color, the background would stay black. The colored border is just thick enough to delineate a viewport from background of the same color, a nice touch. The third viewport is still smaller, and is cyan with a purple border.

Even though the three viewports have different proportions, the curve runs from one corner to the other. In one case the graph is flattened out; in another it's tall and skinny. By varying the parameters of the Window and View commands, you can play with a function curve's shape and proportions.

PSET and PRESET are the GW equivalents of Model III Basic's Set and Reset statements, dressed up to handle color. The GW Point command not only determines if you set a given coordinate, it also tells you the point's color, and you can use it to return the cursor's current position. In text mode only, you can use the Screen function to test a given screen position for the character there, or for color. Be aware that Reset in GW Basic performs the drastic task of closing all open disk files.

The View Print statement performs a similar windowing function with text. You can limit the active text screen to a range of screen rows, as you can by POKEing to 16916 on the Model III. Program Listing 6 is an example. Note this difference from the graphics window: a CLS command clears the whole screen, not just the window.

As impressive as GW-Basic is, it still could be easier to use. The graphics commands, in particular, are frustrating to learn. That's the price of complexity. But when you've set aside enough memory, used the right variable types, and figured what works in which mode, the result can be excellent. That's the reward of complexity. ■

Dave Rowell is an 80 Micro technical editor who specializes in MS-DOS computers.

Dueling Software

by Bradford N. Dixon
and Dave Rowell

This all started when 80 Micro technical editor Brad Dixon strolled over to colleague Dave Rowell's desk in the tech room and deliberately spilled coffee all over Rowell's DeskMate manual. Rowell slowly rose to his feet. He snatched the clip-on pen from Dixon's shirt pocket, threw it to the floor, and ground it under his heel. Before anyone could stop him, Dixon had picked up his softball glove and slapped Rowell's cheek with it. "You dare insult me," sneered Rowell, a cold, hard glitter in his eyes....

Of course, they had to fight a duel after that. Cruelly, Dixon proposed the most brutal of all blood sports—shopping. The challenge was to spend \$1,000 on software for the Model 4 and \$1,000 on Tandy 1000 software. The duellers would have to hunt mercilessly for bargains—each tapping his expertise in a particular machine—using every ounce of skill to find the most useful, highest-quality software for the money. Armed with hundred-dollar bills from a Monopoly game, Rowell and Dixon measured off 10 paces and the duel began. Here's what they bought.

Dixon's Picks

For me, the task of making a wish list of Model 4 software was pretty easy, since my background is with Tandy's Z80-based computers. The variety of good Model III/4 software for any application rivals that for any personal computer. The fact is, my \$1,000 wasn't enough for everything I wanted. I managed to find 13 programs and spend \$999.25 with no problem at all.

Buying MS-DOS software, however, was new to me. Like many TRS-80 owners, I haven't paid all that much attention to PC compatibles, except to envy the color and graphics capabilities of MS-DOS machines. I found fewer bargains for the 1000 software than for the Model 4—only nine programs for \$994.95.

Model 4

Allwrite \$199.95 from Prosoft, Box 560, N. Hollywood, CA 91603, 800-824-7888, oper. 422.
Manufacturer: Prosoft.

This isn't the least expensive Model 4 word processor around, but it is one of the most versatile. Word processing is the primary reason I use a computer, so buying a first-class program was the only way to go.

DotWriter 4.0 \$69.95 from JMG Software International, 3235 Lockport Road, Niagara Falls, NY 14305, 416-575-2867.

Manufacturer: Prosoft (see address above).

To go along with Allwrite, I chose a printer driver program that matched my word processor in number of features. Changing fonts and print sizes isn't for everyone, but it can spruce up an otherwise ordinary letter.

Double Duty \$69.95 from Tandy/Radio Shack, 1800 One Tandy Center, Fort Worth, TX 76102, 817-390-3011.
Manufacturer: Tandy/Radio Shack.

This well-regarded utility is one of three Radio Shack programs on the list; it lets you run two Model 4 applications simultaneously on a 128K system.

Two 80 Micro editors go gunning for a high-caliber software library.

Microlink II \$79 from B.T. Enterprises, 10 Carlough Road, Bohemia, NY 11716, 516-567-8155.
Manufacturer: B.T. Enterprises.

Microlink is the best terminal package I've found for the Model 4. It's easy to learn and use, and it takes advantage of Model 4 features in ways no rewritten Model III program does. I like it and use it.

Orchestra 90 \$68 from Montezuma Micro, Redbird Airport, Hangar 18, P.O. Box 32027, Dallas, TX 75232, 214-339-5104.
Manufacturer: Tandy/Radio Shack (see address above).

I've heard demonstrations of this music program; one of the reasons I chose it was for its entertainment value. Another reason is the amount of free music available for it on BBS systems and from CompuServe's Orchestra 90 special-interest group.

PFS:File \$107 from Montezuma Micro (see address above).
Manufacturer: Software Publishing Inc., 1901 Landings Drive, Mountain View, CA 94043.

I've found this data base manager simple to learn and flexible to apply.

Planetfall \$34.50 from JMG Software International (see address above).
Manufacturer: Infocom Inc., 55 Wheeler St., Cambridge, MA 02138.

This is the only game on my Model 4 list. It may not be Infocom's most challenging adventure, but it does have the best sense of humor.

Supercross/XT and CNVBasic/CMD \$119.95 from Powersoft, 17060 Dallas Parkway, Suite 114, Dallas TX 75248, 214-733-4475.
Manufacturer: Powersoft.

You can buy these two utilities separately or as a package. Supercross/XT is a file-transfer utility that lets your Model 4 read Tandy 1000 disks and copy programs to or from those disks. A companion program, CNVBasic/CMD converts Model I/III programs to MS-DOS, CP/M, or Model 4 format. Both programs come in handy when you're programming on more than one computer.

Super Utility Plus 3.2 \$59.95 from AML, 612 Washington, Denver, CO 80203, 800-468-4474.
Manufacturer: Powersoft (see address above).

No software wish list would be complete without Powersoft's Super U. You can use version 3.2 on Model III or 4 disks.

System Diagnostic \$99.95 from Howe Software, 14 Lexington Road, New City, NY 10956, 914-634-1821.
Manufacturer: Howe Software.

System Diagnostic tells the Model 4 owner what's right and what's wrong with his computer, from disk drives to memory.

TRSDOS 1.3 \$12 from Montezuma Micro (see address above).
Manufacturer: Tandy/Radio Shack (see address above).

Radio Shack's Model III operating system lets Model 4 owners tap the multitude of Model III software still available.

ZBasic 3.0 \$79.50 from JMG Software International (see address above).

Manufacturer: Simutek Computer Products Inc., 4897 E. Speedway, Tucson, AZ 85712.

Machine-language programming isn't for everyone, but everyone wants the speed of machine language. This Basic compiler converts Basic files to /CMD files.

Tandy 1000

EZ-Does-It \$199.95 from Hammer Computer Systems, 700 Larkspur Landing Circle, Suite 285, Larkspur, CA 94939, 415-461-7633.

Manufacturer: Hammer Computer Products.

This program runs up to eight Model 1000 files concurrently without requiring a hardware modification. Using the control and function keys, you can simultaneously run all programs that can fit into the 1000's memory.

Flight Simulator \$34 from Applied Computer Products, 1633 Republic Road, Huntington Valley, PA 19006, 215-322-6500.

Manufacturer: Microsoft, 10700 Northrup Way, Bellevue, WA 98004.

Microsoft's classic has to be a must for any MS-DOS library.

Gato \$25 from Conroy-LaPointe, 12060 S.W. Garden Place, Portland, OR 97223, 800-547-1289.

Manufacturer: Spectrum Holobyte Inc., 1494 Greenbriar Blvd., Boulder, CO 80303.

This real-time submarine simulator is a challenge for players of any ability.

Microsoft Basic Compiler \$229 from CompuClassics, 6934 Canby St., Suite 104, Reseda, CA 91335, 800-328-4473. Manufacturer: Microsoft (see address above).

Microsoft's compiler speeds up those normally slow-running GW-Basic programs.

The Norton Utilities \$48 from Computers Direct, 6232 Oakton St., Morton Grove, IL 60053, 800-848-0888.

Manufacturer: Peter Norton, 2210 Wilshire Blvd., Santa Monica, CA 90403.

Peter Norton's disk utility package is the Super U of the MS-DOS world. (At this writing, Powersoft was about to introduce its MS-DOS version of Super U.)

Sidekick \$30 from PC Connection, 6 Mill St., Marlow, NH 03456, 800-243-8088.

Manufacturer: Borland International, 4113 Scotts Valley Drive, Scotts Valley, CA 95066.

A concurrent desktop utility. With only a few keystrokes, you can display all the information you need to keep things organized: a calculator, a notepad, an ASCII table, and more.

Supercalc III \$219 from CompuClassics (see address above).

Manufacturer: Sorcim/IUS Micro Software, 2195 Fortune Drive, San Jose, CA 95131.

Supercalc III provides a better data base than DeskMate, along with the graphics 1

need to present data base or spreadsheet information. The price may be steep, but it's a program with applications beyond those I can list here.

ThinkTank \$105 from Conroy-LaPointe (see address above).

Manufacturer: Living Videotext Inc., 1000 Elwell Court, Suite 232, Palo Alto, CA 94303.

An idea processor for writers who need to outline their thoughts.

Volkwriter \$105 from Conroy-LaPointe (see address above).

Manufacturer: Life Tree Inc., 411 Pacific St., Monterey, CA 93940.

I found this popular word processor easy to use and flexible in handling printers and text-formatting commands.

DeskMate Free with a Tandy 1000. Manufacturer: Tandy/Radio Shack (see address above).

I didn't include a terminal program in my list because DeskMate's is sufficient for me. The other utilities in the program no longer meet my needs, so I found more powerful programs.

Rowell's Choices

It was easier for me to come up with the Tandy 1000 list; I'm most familiar with MS-DOS computers. I'm a little less secure about my Model 4 choices.

The order of listing has some correlation with a program's importance for me. My listed prices usually don't include shipping, but I took shipping charges, or lack thereof, into account when comparison shopping.

I don't need a spreadsheet, so I didn't pick one for the Model 4. With the 1000, I can use DeskMate's. I suppose I could have fallen back on DeskMate for other types of software that I use rarely.

Once I made my Model 4 choices, it was easy to stay under \$1,000. There's plenty of room for a few luxury items if you spend wisely. I found 16 Model 4 programs for \$998. For the Tandy 1000, I got 12 programs for \$981 (good luck finding an MS-DOS software product for the remaining \$19). With the exception of the Borland International products and a few others, MS-DOS programs are pricier. I didn't have enough to buy a Basic compiler, for instance.

Model 4

Super Utility 4/4P \$70 from Montezuma Micro (see address above).

Manufacturer: Powersoft (see address above).

This disk utility is, in a word, indispensable.

Scriptit \$85 from Montezuma Micro (see address above).

Manufacturer: Tandy/Radio Shack (see address above).

The word processor I'm used to. A word processor is important to me, but I don't need lots of features. I'm going to soup up this one with the two add-ons below.

Powerscript \$35 from DiskCount Data, 2701-C W. 15th St., Suite 612, Plano, TX 75075, 214-680-8268.

Manufacturer: Powersoft (see address above).

An enhancement package adding all the features of SuperScript except proportional spacing and a couple of others.

Powerdriver \$30 from Powersoft (see address above).

Manufacturer: Powersoft.

In case I want to use a non-Tandy printer for fancy stuff.

Electric Webster \$90 from Cornucopia Software, P.O. Box 6111, Albany, CA 94706, 415-524-8098.

Manufacturer: Cornucopia Software.

I've just discovered that spelling checkers are worth the money.

Zork II \$40 from JMG Software International (see address above).

Manufacturer: Infocom Inc. (see address above).

For adventure games, I like Infocom.

M-ZAL Macro Assembler \$80 from JMG Software International (see address above).

Manufacturer: Computer Applications Unlimited, P.O. Box 214, Rye, NY 10580.

I'm just getting started in machine-language programming. Hardin Brothers likes this one and the features seem right.

TRSDOS 1.3 \$12 from Montezuma Micro (see address above).

Manufacturer: Tandy/Radio Shack (see address above).

A small price to pay for the option of running Model III software.

ZBasic 3.0 Basic Compiler \$80 from JMG Software International (see address above).

Manufacturer: Simutek Computer Products Inc. (see address above).

For me, Z's overall features outweigh its lack of a chaining capability.

The Producer \$200 from Producer Software, Box 1245, Arlington, TX 76004.

Manufacturer: Producer Software.

I don't need a data base, but I like playing with data bases anyway. It would be fun to design my own with this recommended program writer. The enjoyment would justify the program's high price for me.

Hypercross \$50 from Hypersoft, P.O. Box 5115, Raleigh, NC 27609, 919-847-4779, 6-11 p.m.

Manufacturer: Hypersoft.

To transfer files from the Model III/4 to MS-DOS computers.

MTerm \$60 from Design Software, Box 42847, Las Vegas, NV 89104, 800-622-4070.

Manufacturer: Micro-Systems Software Inc., 4301-18 Oak Circle, Boca Raton, FL 33431.

I don't telecommunicate much. I'm more likely to transfer files via a null modem. This terminal program looks as if it'll do the job at a reasonable price.

Disk Drive Analyzer \$26 from Montezuma Micro (see address above).

Manufacturer: Tandy/Radio Shack (see address above).

Important with a Radio Shack computer, but not that important. As the ad says, "Why pay more?"

LS-Utility Disk \$50 from Logical Systems Inc., 8970 N. 55th St., P.O. Box 23956, Milwaukee, WI 52332, 800-248-3535.

Manufacturer: Logical Systems.

A good bunch of utilities that Super U doesn't provide.

Double Duty \$60 from Montezuma Micro (see address above).

Manufacturer: Tandy/Radio Shack (see address above).

This is a luxury, a gee-whiz program that's really handy from time to time. It does require a 128K machine.

Voyage of the Valkyrie \$30 from DiskCount Data (see address above).

Manufacturer: Not available.

I had \$32 of my \$1,000 left and went for something frivolous.

Tandy 1000

Perfect Writer (with speller) \$199 from Conroy-LaPointe Inc. (see address above).

Manufacturer: Thorn EMI Computer Software Inc., 3187 C Airway Ave., Costa Mesa, CA 92626.

This word processor has lots of features for the price, is easy to use, and has a speller. Doesn't tell you where you are in the document, though.

SideKick \$30 from PC Connection (see address above).

Manufacturer: Borland International (see address above).

The desktop program of choice if you're a programmer, since it has an ASCII table and a calculator that works in hexadecimal and binary formats.

ThinkTank \$99 from Northeastern Software, 88 Riders Lane, Stratford, CT 06497, 203-375-3860.

Manufacturer: Living Videotext Inc. (see address above).

An outlining program, and a good writer's crutch.

The Norton Utilities 3.0 \$55 from Business Computers of Peterborough, NH, School St., Peterborough, NH 03458, 603-924-9406.

Manufacturer: Peter Norton (see address above).

Great for recovering data and exploring your disks. (There's a Super Utility for the 1000 in the works.)

Flight Simulator \$32 from Northeastern Software (see address above).

Manufacturer: Microsoft (see address above).

A classic. More than a game, it shows what the 8088 can do.

MASM \$65 from MC-P Applications, 1630 Oakland Road, Suite A114, San Jose, CA 95131, 408-293-3360.

Manufacturer: Microsoft (see address above).

The standard assembler for PC compatibles.

dBase II \$249 from Northeastern Software (see address above).

Manufacturer: Ashton-Tate, 10150 W. Jefferson Blvd., Culver City, CA 90320.

The well-known relational data base. Not easy to use, but powerful; I want to experiment with it.

Copy II PC \$25 from Telasoft, 2222 E. Indian School Road, Phoenix, AZ 85016.

Manufacturer: Central Point Software Inc., 9700 S.W. Capitol Highway 100, Portland, OR 97219.

I promise I won't misuse it.

Turbo Pascal \$30 from PC Connection (see address above).

Manufacturer: Borland International (see address above).

The cheap way to learn Pascal.

SmartCom II \$89 from PC Connection (see address above).

Manufacturer: Hayes Microcomputer Products Inc., 5923 Peachtree Industrial Blvd., Norcross, GA 30092.

The Great Divide

by E. Cameron Snyder

Partition your 128K Model 4 so you can switch back and forth between two programs in Model III mode.

If you own a 128K Model 4 or 4P, chances are you've heard about Radio Shack's DoubleDuty utility, which splits your computer into independent partitions so you can switch between two Model 4 programs at will. But DoubleDuty works only with TRSDOS 6.X. Why waste your computer's extra memory and bank-switching feature when you run programs in Model III mode?

Times2 gives you DoubleDuty's capabilities for Model III programs by setting up two partitions operating under LDOS 5.1.X (see the Program Listing). You can load two Model III applications and switch back and forth between them, returning to each program just as you left it.

Even if you don't need double program operation, how many times have you been in the middle of a job and needed information from another program, or a simple directory listing. With Times2 installed, you can get that information and return with your job intact.

What You Get

Times2 is an interrupt routine that creates and switches between two partitions that function like two independent Model 4's in Model III mode. Unlike DoubleDuty, Times2 doesn't provide a third partition for library commands. But Times2's partition swapping is about 10 times faster than DoubleDuty's. Also, with my program, you only need a system disk available for the first swap or for a soft reset (described below).

Times2 uses 187 bytes of high memory and is nondestructive. It duplicates any routines resident in upper memory and above HIGH\$ when you install it and makes those routines active in the second partition as well as the first. This includes filters, routers, drivers, Debug or Clock status indicators, and the like. Any routines you activate after you install Times2 will work only in the partition in which you activate them.

The program duplicates active job control language (JCL) routines (those that call Times2) to the second partition. Therefore, when you enter the second partition, JCL takes control of your computer at the point right after Times2's invocation, even if the first partition has already completed the JCL operation. While you can use this creatively, it can also be a hindrance, in which case I suggest you invoke Times2 manually or use the command AUTO TIMES2.

Times2 has the added feature of speeding up the 4/4P's Model III-mode clock to run at 4 MHz. On the Model 4P, Times2 slows down the cursor-flash and key-repeat rates so you won't get dizzy and fall off your chair. It also compensates the real-time clock counter so that TIME\$ doesn't run at double speed.

I couldn't compensate the cursor-flash rate and real-time clock counter on the Model 4; they're maintained in ROM. If this bothers you, omit the fast clock option when you install Times2 (see below).

Don't forget that the clock is specific to the partition it's in. When you exit a partition, its clock stops until you reenter the partition.

Swap and Go

To install Times2, assemble the source code in the Listing and save it to disk. Type in TIMES2 at LDOS ready and press the enter key. If you want the clock speed doubled, hold down the F key immediately after pressing the enter key. When you see the message "Release the <F> key," you know that you invoked the fast clock speed. Oh, and do release the F key when prompted.

Now put a Model III program disk in drive zero (and another in drive 1 if necessary) and load your program as usual. To switch partitions, press the control and right-shift keys simultaneously, then release them. This is a toggle sequence; the same keys switch you back.

For applications that require a reset to exit them, Times2 has a soft reset feature so you don't have to press the computer's reset button; that way, you won't lose Times2 and the program in the other partition. You'll also find this feature useful in recovering from system crashes or as an easy out to the LDOS ready prompt.

To use the soft reset, hold down the control and right-shift keys while you press the left-shift key and release it. Remember to put a system disk in drive zero before you invoke a soft reset.

Times2 provides no special key sequence to disable itself. For that, you'll have to press the reset button.

Dos and Don'ts

Times2's installation will abort if you already have the program resident and active, if another application has already intercepted and changed the DOS exit interrupt vector, or if installation would lower HIGH\$ to below E000 hexadecimal (hex). Times2 can't duplicate more than 4K of high-memory routines to the second partition.

When one or a combination of these three conditions exists, Times2 generates an error message to let you know that it aborted its installation. If the second or third condition is true, you'll have to press the reset button and install the offending routines after you activate Times2. Remember, they're active only in the partition in which you install them.

Applications that don't respect HIGH\$ will destroy Times2. If an application disables interrupts, none of the key sequences described will do anything. In other words, Times2 won't work, since it's interrupt-driven. I think such applications are few, however. The only program I own that disables interrupts for an extended period of time is one that plays music, and who wants to switch partitions in the middle of a song, anyway?

If an application that requires a reset to exit scrambles the resident operating system beyond recognition, Times2 may be

rendered helpless. In such a case, try a soft reset and see what happens.

I'd caution against swapping partitions in the middle of disk accesses. Although I've done it successfully, I haven't tried it enough to ensure that it's safe. Programs usually disable interrupts during critical moments, preventing you from swapping, but keep the warning in mind.

I've found no problem with having the same file open in both partitions, but they've been relative files with fixed lengths. Obviously, if you're working with a file and you switch partitions, change the file's parameters, and switch back again, you could have a problem.

You can switch partitions during a printing job. When you switch back, the printer starts up where it left off. Don't send any output to the printer when you've left a printing job unfinished, though, unless you want mixed job output.

Switching during communications should be no problem as long as you don't switch while receiving data. Times2 doesn't send a stop-sending signal to the host, so you'll lose data. If your modem doesn't maintain the carrier signal without your software active, you may get disconnected, but that should be rare.

Don't try to SYSGEN Times2. You have to install it, because the program adjusts to its environment with the help of a loader, which you can't SYSGEN.

Times2 uses no interrupt slots. It intercepts the DOS exit from ROM, so active interrupt routines will be unaffected.

The program uses the second page of the video RAM, so avoid homebrew applications that use this area. You'll destroy screen information, and when you return to that partition, the screen won't look anything like the one you left.

Except for the special conditions outlined above, you can switch partitions in the middle of any input/output.

Program Structure

This section provides a general step-through to aid in interpreting and understanding Times2's source code. If you're not interested in the nuts and bolts of the program's operation, you can skip the section with impunity.

Times2 has four areas of operation. To minimize confusion, I labeled the source code with the same descriptive terms I'll use here.

I'll describe what each area accomplishes, not how it does so. Those who want more detail should study the com-

HOBBY APPLICATIONS**

It's true

More TRS-80* pleasure and fewer programming headaches can be yours all year with **Load 80**.

Load 80 comes in your choice of cassette or disk, and is filled with more than a dozen "ready to run" programs listed in **80 Micro**.

It's ready

"Ready to run" means the hard work has been done ahead of time! All you do is load and enjoy. No keyboarding hassles. No debugging.

Every *Load 80* features the high-quality tutorials, utilities, games, and word-processing programs you've come to expect from *80 Micro*. It has everything you need for enjoyable, practical, easy TRS-80 computing.

A subscription to *Load 80* is more than just a wise purchase. It's an investment! You'll be building your software library for a fraction of the cost of comparable programs sold in retail stores!

FREE assistance

Should you need assistance, the technical editors at *Load 80* and *80 Micro* will be ready to lend a hand. Hassle-free programming for you and your TRS-80 can begin right now with a year's subscription to *Load 80*. Simply return the postage-paid order card next to this ad, or call **TOLL FREE 1-800-258-5473**. In NH, dial 1-924-9471.

* TRS-80 is a registered trademark of Radio Shack, a division of Tandy Corp.

Yes! Save me time and money with LOAD 80. Send me:

- 1 year of LOAD 80 on disk for \$199.97
- 1 year of LOAD 80 on cassette for \$99.97
- This month's LOAD 80 disk for \$21.47
- This month's LOAD 80 on cassette for only \$11.47

Prices include postage and handling. Foreign airmail please add \$1.90 per item or \$25.00 per subscription. U.S. funds drawn on U.S. banks only.

mented source code in conjunction with the *Model 4 Technical Reference Manual's* hardware section.

Part 1, the loader, is the program's largest and most complex part. It checks the environment in which parts 2, 3, and 4 must operate and adjusts them accordingly. It finds where in high memory they must go to be out of the way.

The loader duplicates Times2 and any other high-memory-resident routines to what becomes the second partition's upper half. It duplicates the operating system and all lower-memory functions into what becomes the second partition's lower half. Finally, the loader puts part 2's

execution address into the DOS exit vector for interrupts.

Part 2 is serviced by the real time clock interrupt. It checks the keyboard to see if you're switching partitions. If not, it passes control to the system interrupt routine, which flashes the cursor or checks for type-ahead characters and the like.

If the routine detects a switching command, it puts part 3's execution address on the stack and passes control to the system interrupt routine. This way, when the system interrupt routine is finished and executes its return from interrupt, control automatically returns to part 3, not to the address where the interrupt occurred.

Program Listing. Times2's source code.

PRINTER DRIVERS FOR SUPERSCRIPIT

Easily and automatically attach your printer to SuperSCRIPIT with an *ALPS software printer driver program*. No need to learn special printer codes. Call or write for info describing features supported on each printer (underline, bold, proportional, scripts, etc.).

Over 120 Different Printers Supported.
Custom Printer Driver For Each Printer.
2-172 years experience. Customer Support !!!
\$49 or \$59 each, depending on printer.

MSDOS UTILITIES TANDY 1000, 1200, 2000 IBM PC/XT/AT

No Technical Knowledge Required !!! Easy to Use.

**** **RAMDISK** **** \$49

RAMDISK -- Use spare memory as a superfast disk to speed up applications. (You specify Ramdisk size). Appears to programs as a disk, but *exists instant access*. Easy to install and use.

**** **ALPHA TOOL BOX** **** \$59

ALPHABETIZED DIRECTORY DISPLAY -- View Directory on 1 screen (2 columns sorted, Fast).
FIND FILE -- Search all directories for file
DIRECTORY DTREE -- Display all sub-directory names in an easily readable form.
BACKMOD MODIFIED FILES -- Quick, automatic backup of files. Backup in same format as original. Perfect for Hard Disks. Also for floppies.

**** **BETA TOOL BOX** **** \$59

SINGLE KEY COMMAND -- Define any text string (or OOS Command) as a single keystroke. Press single key to execute commands!
COUNT LINES -- Superfast count of lines in a file.
DUMP FILE IN HEX -- Formatted dump of file in Hex/Ascii. Scroll Forward, Backward, Begin, End
CHANGE FILE ATTRIBUTES -- Make files hidden, readonly, archive, etc. Set or reset attributes.

**** **SERIAL PRINTERS** **** \$49

Connect your Serial Printer to your RS232 port. Full handshaking. Easy commands. Complete instructions.

Don't miss the review of these ALPS utilities in the February, 1985 issue of 80-Micro (P.119).
More ALPS Tools Available. Call or Write for ALPS catalog. Customer Support !!!

BEST BUY

THE "BEST" SOFTWARE IS GUARANTEED! TRY IT and LIKE IT, or GET a REFUND

The machine code disk L-W is "A" rated by Allenbach's "SOFTWARE REPORTS" for:

EASY USE, DOCUMENTATION, FEATURES

- FORM LETTERS and LABELS on any printer.
- ADD end RUB bookkeeping and tax columns.
- LEGAL PAPER LINE NUMBERING, Centering.
- Copy, move, delete, insert, merge, select.
- Screen display same as printout, unmodified M1 users can see and print up/lower case.
- MASS MAILER, graphics, cancel changes.
- SPLIT SCREEN typing line, see old and new versions, word wrap, disk warm start.
- Over 50 "one key" INSERTION PHRASES.
- ONE MODE: Type / Edit / Delete without switching modes - NO TRAINING PERIOD.

WE PAY TAX and USA SHIPPING. Try your L-W for 2 months. Like it or return it for a refund, less our shipping costs of: \$3.50.

Part 3 is the doorway or portal through which you pass to get to the other partition. It has two halves, one for leaving a partition and one for entering a partition. The routine's first half saves the address on top of the stack; this is the restart address, where the interrupt occurred and where the system should restart on reentry to the partition. Then, the first half saves all the registers so the second half can restore them on reentry, and switches partitions.

On entry to a partition, part 3's second half relocates part 4 to a safe area of lower RAM and passes control to it.

Part 4 does nothing more than save the exiting partition's screen and recover the entering partition's screen. It then returns control to part 3's second half, which recovers the reentry address from the stack, restores all the registers, and returns to where the interrupt occurred before the switch.

Modifications

If you like Times2's clock speed-up, but find it makes a game or other timing-critical program run too fast, you can reset bit 6 at location 4210 hex, then output the 4210 hex byte to port EC hex. The following four statements, inserted at the beginning of a Basic program, accomplish this:

```
var = PEEK(&H4210);
var = var AND 191 ;
POKE &H4210,var;
OUT &HEC,var
```

You should replace "var" with some numeric variable. These statements force the partition to go slow. You'll switch speeds when you swap partitions, since Times2 remembers a partition's speed. To force the partition to go fast again, use the same four statements, substituting OR 64 for AND 191 in the second statement.

If you get tired of pressing F and prefer to invoke the speed-up automatically, apply this patch from LDOS ready:

```
PATCH TIMES2/CMD (X'5237' = 00 00)
```

Users who've upgraded to LDOS 5.1.4 don't need the F key or the above patch for the speed-up, since the operating system already provides this as a default. Also, executing CMD "SYSTEM(SLOW)" or CMD "SYSTEM(FAST)" from Basic precludes the use of the Basic statements listed above, since those commands function properly on the Model 4/4P under the new version.

The 5.1.4 version doesn't compensate the real time clock, key-repeat and cursor-flash rates on the 4P however. If your cursor is zipping along out of control or flashing you into catatonia, use the F key or apply the patch listed above and all will be well. ■

Cameron Snyder, business manager for the Sacramento Family Service Agency, uses his computer for business and pleasure. You can write to him at 7308 E. Parkway, Sacramento, CA 95823, or via CompuServe's EasyPlex mail service, ppn. 70645,1354.

Put an Amber CRT in Your Computer

Now you can eliminate the strobe, flicker and fatigue from your computer terminal with a new amber *Soft-View™* replacement CRT from Langley-St. Clair.

Available for the TRS-80, TeleVideo, Kaypro, Heath, DEC, Zenith, IBM PC, Apple III and a wide variety of other monitors. These new replacement display tubes use amber phosphors which exceed the European standards for persistence and color. And the "decay" or fade-out rate of the phosphor is the same as the "refresh" or scanning rate of the computer screen, so the display glows gently, rather than flickering like a strobe light - an annoying problem with inexpensive green phosphor tubes.

- Available in medium decay "European Phosphor" (the standard in Europe).
- Made with Lead/Strontium Impregnated glass that stops X-ray emission.
- High-contrast double dark face glass that also cuts U.V. radiation.
- Face of tube is etched to stop glare.
- Easily installed...comes with pre-mounted hardware.
- Ideal for word processing and programming, yet fast enough for games and graphics.
- Warranted for one full year against manufacturing defects or tube failure.
- Comes with a 30 day money back guarantee.

ALSO IN GREEN

PUT IN A F.E.B.™ CRT IN THE PLACE OF YOUR TERMINAL OR MONITOR AND ELIMINATE THE STROBE AND FLICKER AND EYE FATIGUE WITH THE NEW SOFT-VIEW™ REPLACEMENT CRT FROM LANGLEY-ST. CLAIR

**ORDER NOW!
TOLL-FREE
800-527-3582
Orders Only Please**

Call in your order or write to us at the address below. Texas residents call us at 214-337-4346 and deduct \$2.00 from your order but you should remind me 'cause sometimes I forget. If you need technical information or service please call the Texas number as the Toll Free lines are just for orders only. Prices are subject to change without notice and are mail order only. I accept AMERICAN EXPRESS, MASTERCARD and VISA and I will not charge your card until I ship your goodies. You can send a check or a money order. I also accept COD orders but they require cash or a cashier's check upon delivery. If shipping charges are not shown please call for the correct amount. Add \$5.00 handling charge if your order is less than \$50.00. Shipping charges quoted in this ad are for the lower 48 states only. Orders to Canadian address add \$20.00 to pay for doing all those papers for customs. Texans add State Sales tax. No tax collected on shipments outside of Texas. Be sure you know what you are buying. SOFTWARE IS SOLD ON A REPLACEMENT BASIS ONLY - NO REFUNDOS. If it is defective call us for instructions. Please order from me now---I need the money and I will not jack you around. I reserve the right to charge up to a ten percent restocking charge if you jack me around. All merchandise carries the original manufacturers' warranty and all repairs or adjustments will be made by the manufacturer or his designated representative.

MODEL 4 OWNERS

Want More Performance?
More Speed?

OVERDRIVE "The Extra Burst"

Store all DOS overlays in one alternate memory bank. Also increased floppy disk performance with full track buffering on up to 2 drives. Takes NO room in normal high memory! (128K required).

DSM4 "The Super Sort"

Fast machine language sort. Creates a sorted index for your data files. Handles ASCII types along with BASIC integers, single and double precision. Limited only by disk space - NOT by memory!

BEEP "Keystroke Saver"

For BASIC programmers. Allows abbreviations for Edit, List, etc. Arrow keys to view program lines. High speed program load and save. Don't pass up this time saver!

OVERDRIVE L-35-220 for just \$99
DSM4 L-35-205 for just \$99
BEEP L-35-209 for just \$49

Domestic orders add \$1 shipping plus \$5 handling for orders not prepaid with check or money order.

Patch Work II: The Sequel

With these 13 additional improvements, TRSDOS 1.3 gets better and better.

Sometimes, a good patch just isn't enough. You improve your disk a bit, it runs a little better, and you think you'll be happy. But you aren't. You always want more.

This is what I found after I'd patched my TRSDOS 1.3 disk. I thought I was done, but after I published my 13 patches in *80 Micro* ("Patch Work," January 1985, p. 112), I received letters and telephone calls from readers asking questions and making suggestions for new patches. Building on those suggestions, I compiled another 13 patches for TRSDOS 1.3; although these are more thorough than the first bunch, they still don't create the definitive DOS.

Patch Purposes

These 13 new patches improve TRSDOS 1.3's efficiency and convenience. They let you repeat DOS commands, type DOS commands in lower- or uppercase, include comment lines in do-files, skip the password prompt and check for the Purge and Back-up commands, create a default disk name for the Format command, select a more logical default parameter for the List command, change the disk drive stepping rate, use Debug to view any memory address and the Dump command to dump any address, eliminate or shorten Basic's opening banner, alter the TRSDOS boot-up and Ready messages, change the cursor character, select a global password protection level, and display a directory listing one page at a time with a prompt to continue.

Installing the Patches

Naturally, you don't have to install all the patches; just pick the ones you want. If you want to avoid typing them anew for each disk, you can use the do-file creator program on this month's *Load 80* (see p. 6). DOMAKER/BAS displays each patch, lets you select the ones you want, and creates a do-file so you can apply the patches to as many disks as you like without re-typing.

Getting Started

You install the patches with the TRSDOS Patch command. This is simple to do, but make sure your disk isn't write-protected. Start at TRSDOS Ready. Type in the desired patch, proofread it, then press the enter key to finish the command. If a patch has more than one line, be sure to enter all lines before doing anything else. For example, if a patch has three patch lines, you must enter all three lines in the order given as three separate TRSDOS commands. Do not invoke any other DOS commands until you finish all patching.

If you get an error message when installing a patch, try to determine what is wrong before continuing. Also remember that some patches don't take effect until you reboot your computer.

Patching writes new code to the machine-language system programs stored on disk. So, if you make one typographical error, you could destroy a disk in seconds. Always install a new patch on a back-up disk. Don't patch more important disks until you know the patches are working as expected.

If you've applied non-Radio Shack patches to your TRSDOS 1.3 disk, these 13 patches might not work. However, they do work with all the patches in "Patch Work."

The Patches

Since "Patch Work" contained the first 13 patches, I've begun numbering the patches presented here at 14. Figure 1 contains the code for all the patches.

Patch 14 improves the way TRSDOS 1.3 accepts DOS commands. First, it gives

you repeating DOS commands; press the enter key and the computer displays and executes your last DOS command. Second, you can enter a DOS command in lower- or uppercase letters or a combination of the two. (The computer internally converts the letters to uppercase. This patch works fine for DOS commands, but some programs and utilities may still accept only uppercase letters.)

Third, the computer will ignore any DOS command line that begins with a period. While this may sound silly, it is actually quite useful. You can now put comment lines in do-files by beginning those lines with a period. When you run the do-file, the computer displays the comment lines but doesn't try to execute them or return an error message.

This new routine does not erase the TRSDOS Ready dots. (That is where I put the new code). Therefore, you'll probably want to eliminate those dots. Patch 10 from "Patch Work" takes care of that.

Patch 15 switches the default parameter for the TRSDOS List command. Normally, TRSDOS lists files in the confusing hexadecimal (hex) format unless you use the ASCII parameter. Once you install Patch 15, TRSDOS will list files in the legible ASCII format unless you add the new Hex parameter.

Patch 16 improves the Dump command so you can dump any memory address, not just those above 5FFF hex. Patch 17 lets the Debug utility examine any memory address, not just those above 55FF hex. It can also modify code at any memory address except those in ROM. Radio Shack originally issued Patch 17 in *Microcomputer News* (February 1982, p. 21, and June 1982, p. 33) but has given permission for me to reprint it here.

Patch 18 modifies the Back-up command so it bypasses the password prompt, ignores the disk master password, and improves the Format command. Press the enter key when TRSDOS asks you to name the disk. Rather than asking again for a

Patch 23 affects the entire TRSDOS 1.3 password-protection scheme.

name. the program continues and names the new disk "DATADISK."

Patch 19 changes the Purge command so it no longer asks for nor cares about the disk master password.

Patch 20 augments Patch 3 of "Patch Work," which improves the Directory command so it displays directory files in the normal long format but only one page at a time. If there are too many entries for a screen, the listing pauses and waits for you to press the enter key to continue. With Patch 20 in place, a message appears at the appropriate time to remind you to press the enter key. Apply Patch 20a if you've already applied Patch 3; apply 20b if you have not. Don't apply both.

Patch 21 shortens or eliminates Basic's opening message. This is useful with a Basic program that operates under the AUTO command. Install 21a if you want to eliminate Basic's opening banner, install 21b if you want to shorten the banner so it displays only the amount of free memory and number of file buffers available. Pick one patch but not both.

Patch 22 alters the default cursor and keyboard values when you reboot the computer. Normally, TRSDOS begins with a flashing cursor set to a graphics block (ASCII value 176) and with the caps lock on. In the code for Patch 22, change the "xx" to the hex value of the cursor character you want. For example, use 5F for an underscore or C4 for the smiling face.

Change the "y" to I for a non-flashing cursor or to zero for a flashing cursor. Change the "z" to 1 to begin with the caps lock on, or to zero upper- and lowercase. This last setting is nice if you've applied Patch 14.

You can't install Patch 22 unless you've applied Patch 7. That patch improves the Auto command so the computer displays the name of the file you're automatically loading rather than just the message "AUTO Function Engaged." Patch 22 uses space freed up when you apply Patch 7. Remember, you can't use Patch 22 as is; change the variables to the settings you want.

Patch 23 affects the entire TRSDOS 1.3 password-protection scheme. Use it for special purposes. By only applying 23a, you can access any file on the disk regardless of password protection. By adding 23b, you'll give every file the protection level you designate, whether the file has a

Figure 1. Patches 14-26. Make sure you leave a space after the word PATCH.

Patch 25 lets you change the TRSDOS Ready prompt to the message of your choice.

password or not. This is useful in places such as schools where students "accidentally" destroy other students' files. Set the protection level to 5 and a student can read, list, or execute any file, as well as save it under a new name. However, the student can't kill or overwrite a file.

You can't use the patch line in 23b as is. Change the "x" to the protection level you want, from zero (full access) to 7 (no access). Do not use a protection level of 3 as TRSDOS does not fully support it. If you apply 23a alone, all files will always have full access status.

Patch 24 changes the disk drive stepping rate. TRSDOS steps all disk drives at the same rate. As distributed, that rate is 6 milliseconds (ms). Some older drives can't step that fast. To help avoid disk errors, use a slower stepping rate. Patch 24 lets you select one of the four rates permitted by the disk controller: 6, 12, 20, or 30ms. Try to use the fastest rate that doesn't give you disk errors.

Before using this patch, change the "x" to C, D, E, or F, and the "y" to 8, 9, A, or B for 6, 12, 20, or 30 ms rates, respectively. Once patched, the selected rate works for all disk drives at all times except during the system boot. TRSDOS 1.3 uses only one stepping rate for all drives. You'd have to rewrite too much system code to permit setting separate stepping rates for individual disk drives.

Patch 25 lets you change the TRSDOS Ready prompt to the message of your choice. Many people asked for this patch so they wouldn't confuse regular TRSDOS 1.3 with a modified version. This change requires some work on your part.

You must first compose your new prompt. It should consist of 12 or fewer

characters. If you use fewer than 12 characters, add spaces to bring the total up to 12. Almost any character, even a graphics block, works fine. However, you should avoid control characters (ASCII values less than 32) and all special characters (ASCII values greater than 191).

Next, convert each character in your message to a hex pair (see the table in the Model III manual). For example, the letters A and Z become 41 and 5A hex. Don't forget the spaces that convert to 20 hex.

Don't use the code for Patch 25 as listed. Instead, substitute the first six hex pairs of your message for the CHG value in the first patch line and the second six pairs as the CHG value in the second patch line. See Fig. 2a for an example of an altered prompt.

Patch 26 is similar to Patch 25, except that it modifies the message the computer displays when you boot TRSDOS. However, it gives you 35 characters to work with rather than 12. The procedure, though, is identical. Design your message, convert it to hex pairs, then use those pairs in place of the "xx" values in the five patch lines. Each line holds seven characters. Break your message into groups of seven hex pairs, then assign each in order to each patch line. Don't forget to pad your messages with spaces if your message is shorter than 35 characters.

Patch 26 only affects the message that remains after you've installed Patch 11. Patch 11 shortens the boot-up banner from a picture to just one line. You don't have to use Patch 11, but if you don't, your new boot message could get lost in the crowd.

You can't use Patch 26 as listed. Substitute the hex pairs of your message for the CHG values. Figure 2b shows the patch for a sample message.

JOIN THE FORTH REVOLUTION

Discover the flexibility and power of FORTH programming!

You'll find your development time is shortened, programs run faster and memory requirements are drastically reduced. FORTH is the language of tomorrow and it's available today from SOTA Computing Systems Limited.

figFORTH from SOTA

With truly impressive benchmark timings -- a library of over 300 predefined FORTH words and running in less than 8K -- this is the state-of-the-art FORTH implementation you have been waiting for!

an amazingly low price for an incredibly powerful programming system!

\$75.00

Gives you the introductory programmer's guide, the comprehensive reference manual and FORTH disk. The diskette contains the standard core vocabulary, an editor, and assembler (with true 280 mnemonics) and a FORTH operating system (which like FORTH itself is simple to use and easy to master). In addition to the FORTH definitions required by the standard, we've included over 50 extra commands that you'll find particularly useful. SOTA doesn't even require any expensive and awkward licensing arrangements, as long as you're not using our object code to simply re-market a FORTH system, you are free to make as many copies of the object code as you like and distribute them as you please. What's more, figFORTH from SOTA is totally compatible with TRSDOS, LDOS, NEWDOS, DOSPLUS, CP/M Plus and CP/M from Montezuma Micro.

Don't wait any longer! Free postage from the shores of SOTA! -ORDER NOW- Join the FORTH revolution TODAY!

Listing 3 continued

Upgrading from my trusty Model III to the Model 4 had its advantages, but I was a little disappointed to find that the TRSDOS 6.X version of Basic lacked the Point, Set, and Reset graphics commands. I could always turn screen dots on and off at the character level, but I wanted individual pixel control, which just wasn't available. So I wrote a Basic routine, called Pixel, that you can use at the beginning of any program to install the Point, Set, and Reset functions on a Model 4.

Points of Interest

Type in Program Listing 1 and save it to disk with the ASCII option (SAVE "PIXEL".A). Now you can merge it with another program or load it into Basic before writing a new program.

In the routine, Point, Set, and Reset are defined functions that interface with a 104-byte machine-language subroutine. The syntax for calling these commands differs from the Model III's as shown below:

Model III	Model 4
POINT	FNPOINT
SET	DUMMY = FNSET
RESET	DUMMY = FNRESET

For example:

Model III:	IF POINT(X,Y) THEN GOSUB 1200
Model 4:	IF FNPOINT(X,Y) THEN GOSUB 1200
Model III:	SET(10,25)
Model 4:	DUMMY = FNSET(10,25)
Model III:	RESET (X,Y)
Model 4:	DUMMY = FNRESET(X,Y)

System Requirements

Model 4
64K RAM
Disk Basic

There's only one newsstand in the entire world offering you this selection of great computer publications.

You're holding it.

That's right; you can get them all here. **And at discounts.** So browse. Whether you're new to computers, an experienced home/professional user or "in the business": order yours, today!

- Computerworld.** If you manage information, you can't manage without your own subscription. \$39 gets you 51 issues, plus 10 Special Focus publications. Save \$5.
- PC World.** The one publication that will grow with your growing PC needs. Helps you analyze financial/accounting data, manage complex projects, communicate results and plan. Now 12 issues for only \$17.97; you save \$5.78.
- InfoWorld.** The only way to stay on top of what's happening is by getting the **only** personal computing newsweekly. Authoritative. Objective. Easy to read. \$29.58 for 51 issues . . . only 58¢ an issue.
- inCider.** The Apple journal . . . and the **only** magazine devoted exclusively to the Apple family of computers. \$24.97 for 12 monthly issues. Save 30% off the cover price.
- Macworld.** The world's most creative computer demands a journal that's just as simple, powerful and fun: *Macworld*. Now 12 issues of this attractive, easy-to-read publication can be yours for only \$24 (you save \$6).
- HOT CoCo.** Keep the color in your life all year long with *HOT CoCo*, the magazine specifically created for the TRS-80 color computer and MC-10 user. \$24.97 for 12 months. Save 30% off the cover price.
- 80Micro.** Don't risk being an uninformed TRS-80 user. Get current, unbiased, system-specific information from the largest, most knowledgeable TRS-80 source. \$24.97 for 12. Save 48% off the cover price.
- RUN.** The informative (and fun) Commodore 64/Vic-20 monthly. Comprehensive software/hardware reviews, action-packed games and timely tips to help you get the most out of your system. \$19.97 for one year: 43% off the cover price.
- Micro Marketworld.** Selling? Twice a month, get in-depth reviews/forecasts to keep **ahead** of consumer trends/market needs. FREE if you qualify.

On Communications. Bypass, teleconferencing, CATV: each month, explore the major developments shaping our communications world FREE to qualified applicants.

Add \$3.90 for shipping & handling—Visa, M/C accepted—Dealer inquiries welcome

You can substitute any variable name for "Dummy," as in Z = FNSET(10,25).

For a demonstration of Pixel's graphics, merge Program Listing 2 with Listing 1 and run the merged program.

Axis Powers

The Model III's graphics coordinates range from 0-27 horizontally and from 0-47 vertically. Pixel supports the Model 4's larger screen with more pixels, so its limits are 0-159 along the X axis and 0-71 along the Y axis. If you use values outside those ranges, the functions will do nothing or, at worst, generate an overflow error.

The Nitty-Gritty

The key to Pixel lies in lines 2 and 3 of Listing 1. This is the machine-language code that Pixel POKEs into the string called PXLCODE\$ in line 1, and it executes there every time you use Point, Set, or Reset. By the way, use special care when you type in line 1: if the string isn't at least 104 characters long, the machine-language code won't fit.

Line 4 obtains this string's address in PXLPTR!, while line 5 sets up the code therein. Lines 6, 7, and 8 define the three new functions and their entry points.

You don't have to know anything about Assembler or machine language to use Pixel. However, if you're interested in the programming technique used here, take a look at Program Listing 3, the source for the data statements. The supervisor calls (SVCs) make it possible for TRSDOS 6.X to perform certain specialized functions. In my program, the most critical call is the @VDCTL SVC, which facilitates screen-related functions. ■

PowerSCRIPT 4.2

The state-of-the art UNIVERSAL add-on enhancement for SCRIPSIT™ users!

Now supports TRUE Model 4/4P 80 column version of SCRIPSIT

Supports ALL released versions of SCRIPSIT™ for 4/III/1.

Get the MOST from your printer!

Our PowerSCRIPT modification for SCRIPSIT (all versions) gives you everything that SuperSCRIPSIT does, except for proportional printing, but we give features that even SS doesn't have! Our files are full of letters from enthusiastic users who cannot believe how powerful little ole SCRIPSIT can become with PowerSCRIPT! (and this version adds even more features!)

With all the smarter printers out there, it doesn't make sense to use a "dumb" word processor anymore. If you notice, there are MANY word processors out there besides the ones available from TANDY. We could recommend every one of them. IF YOU WANTED TO BUY SOMETHING NEW! What if you don't want to pop another \$200 bucks for another program? What if you don't NEED another program, but you'd like a LOT of new features without relearning a WHOLE NEW SYSTEM? SCRIPSIT is a VERY good program - we just give it some horsepower and bring it up to today's standards! PowerSCRIPT gives you MANY new features, while retaining the commands you already know - at a very low price! All your previous files will of course be compatible.

Some features that get added to SCRIPSIT via PowerSCRIPT 4.2

- Send commands to printer to activate special formats and functions, even embedded in the middle of the line!
- Get an ALPHABETICAL Directory from within PSCRIPT and FETCH KILL or CHAIN - any file right from the display! No more going back to DOS!
- Keyboard can be customized for special needs or keys
- Special characters can be generated from keyboard without using special printer codes!
- Removes protection for your own use
- Any code from 1 through 255 can be sent to printer through special format line
- Video PAGE FORWARD OR REVERSE at a key stroke!
- Multiple files can be CHAINED together at print time!
- Will not crash programs protected in HIGH MEMORY
- END returns to DOS READY quickly instead of rebooting operating system
- Built-in HELP command! HELP can be modified by user
- Optionally select line feed after carriage return
- Support for user-definable filters included

For Model 4,4P, III, or I (lower case only). Works with most Model III/II operating systems or TRSDOS 8.0-8.2 on the Mod 4. Will work OK with TRSDOS 2.7DD, except for D/R from PSCRIPT. Purchaser must own appropriate version of disk-based SCRIPSIT.

PowerSCRIPT 4.2 Still only \$39.95 SuperSCRIPSIT™ Users... We didn't leave YOU out!

Now you can use SuperSCRIPT on your NDN Tandy printer! Your printer will work great using our special Printer Drivers customized for your particular printer and SuperSCRIPSIT. Low priced too, so don't miss out if you have one of the printer models listed! Model 4 fully supported!

- EPSON MX 80/100 series
- EPSON FX/RX 80/100 series
- Most all EPSON compatibles
- Okidata 92/93 Dot Matrix
- C. Itoh 8510 Prowriter
- C. Itoh A10-20 Daisy
- C. Itoh F-10 Starwriter

All features of SuperSCRIPSIT are supported to the fullest capabilities of the printer. Easy to install at OPEN DOCUMENT screen easy to use, and no extra commands to learn!

PowerORIVER-Only 29.95 ea. PLEASE SPECIFY PRINTER TYPE!

These Are The Best of Times

A computer's multiplication process is more involved than you might realize. A processor must execute hundreds of machine-language instructions to multiply two numbers. This month, I'll discuss how a computer multiplies numbers from a software standpoint and describe two hardware projects that illustrate multiplication methods.

I will limit my discussion to multiplying unsigned integers. While multiplying signed and floating-point numbers is more complex, it's a logical extension of unsigned integer multiplication, and the principles described below also apply.

A computer executes seven steps in multiplication:

- It stores the ASCII key values from the keyboard into a buffer area.
- It converts the ASCII number values to packed BCD format.
- It converts the packed BCD values to pure binary format.
- It does the actual multiplication with the binary numbers.
- It converts the product from binary to packed BCD format.
- It converts the packed BCD product to ASCII.
- It sends the product to the computer display, suppressing leading zeros.

I will cover only step 4 (the actual multiplication), assuming that the numbers you want to multiply are already in binary format.

The Multiplication Algorithm

Binary multiplication is similar to decimal multiplication, though binary is more simple, since each digit of the multiplier is always either a zero or a 1. Figure 1 shows the typical decimal multiplication of 238 by 312.

```

  3 1 2   MULTIPLICAND
  • 2 3 8   MULTIPLIER
  2 4 9 6   PARTIAL PRODUCT 1
  9 3 6     PARTIAL PRODUCT 2
+ 6 2 4     PARTIAL PRODUCT 3
  ---
  7 4 2 5 6   PRODUCT
  
```

Figure 1. Decimal multiplication example.

```

  1 1 0 (6) MULTIPLICAND
  • 1 0 1 (5) MULTIPLIER
  1 1 0
  0 0 0
+ 1 1 0
  ---
  1 1 1 1 0 (30) PRODUCT
  
```

Figure 2. Binary multiplication example.

Figure 3. Multiplier register structure.

Photo 1. 4-bit sequential multiplier.

As shown, the computer first multiplies 312 (the multiplicand) by the low-order digit of the multiplier (8); it then puts this product below the line, to add it to other values later. The processor then multiplies the 312 by the next-higher-order multiplier digit (3), and puts this product below the first one, but shifts it one position to the left.

Finally, the computer multiplies the multiplicand by the high-order multiplier digit (2) and puts this product below the previously calculated products, shifted yet another position to the left.

Once the computer calculates all the partial products, it adds them together. You could consider multiplication as merely a systematic sequence of partial products, shifts, and additions. But how do you calculate the partial products? This is where the simplicity of binary

numbers makes calculations easy.

Consider the multiplication of two binary numbers (5 times 6 in decimal) shown in Fig. 2. The computer first multiplies the multiplicand (6) by the low-order multiplier digit (1), and brings the product down below the line. It then multiplies 6 by the next-higher-order multiplier digit (zero), and puts the product below the first partial product, shifted one position to the left. Finally, the processor multiplies the multiplicand by the high-order multiplier digit (1), and puts this partial product below the previous two partial products, shifted one additional position to the left. The computer then adds the partial products to get the final product.

The sequence described above continues for any additional digits that may be in the multiplier. Each partial product is

PRINTER SALE

THE STATE OF THE ART

The C.I.TOH is fully IBM/Tandy 1000-1200-2000 compatible and FAST. Using bidirectional, logic-seeking printing across a full width of 13.2 inches, this little beauty prints at a speed of 350 characters per second (CPS). Letter quality printing is available at a rapid 87 CPS—more than twice the speed of most daisywheel printers. Couple that with a quick linefeed of 30 milliseconds per line and a standard buffer of 2K (16K optional, \$50) and you have just about the fastest throughput around. Only 4.7" high and a low noise level of 58 dBA.

Maximum versatility is offered for data and wordprocessing output, spreadsheets and business graphics by a variability of print densities, speeds, character sets and fonts, spacing, forms control and other attributes realized by operator and computer alterable functions, allowing the printer to be tailored to almost any application.

We could rave on and on about this fantastic printer but the proof is using this printer in your application. Try it on our 14 day money-back-if-not-satisfied plan. Don't be printer bound any longer. Call today.

PROJECT 80

always either zero or the multiplicand, since each multiplier digit is either zero (resulting in a zero partial product) or 1 (resulting in the multiplicand as the partial product). You should note that, like decimal multiplication, the product of two n -digit binary numbers has up to $2n$ digits.

You can implement the multiplication procedure in a number of ways, and I'll describe one common method. Picture your multiplier as having three n -bit registers (for performing n - by n -bit multiplication): an accumulator (AC), a memory data register (MDR), and a multiply quotient register. The computer must logically connect the AC and MQR so that it can shift a bit out of the low-order AC bit position into the high-order MQR bit position. AC and MQR together form a double-precision ($2n$ length) register (referred to as AC/MQR). You must also have a 1-bit register (Carry) to hold the carry out of the AC during the addi-

tion process, until the processor can shift it into the AC. Figure 3 illustrates the multiplier register structure.

The computer multiplies values using this algorithm:

1. It puts the multiplier into the MQR and places the multiplicand into the MDR.
2. It sets a counter to n (for an n- by n-bit multiplication).
3. It clears the AC and Carry registers.
4. It determines if the low-order MQR bit is a 1. If not, it goes to step 6.
5. It adds the MDR value to the AC. It sets the Carry register if a carry occurs, and clears it otherwise.
6. It shifts the AC/MQR double-precision register right one bit position, shifting the Carry bit into the high-order AC bit position and shifting the low-order MQR bit out of the register. It also shifts a zero into the Carry register.
7. It decrements the counter. Is the counter zero? If not, go to step 4.
8. The multiplication is complete. The 2n-bit product is in the AC/MQR double-precision register.

As the algorithm indicates, the multiplication process consists of n add/shift sequences. As the computer shifts the AC/MQR double-precision register to the right, it puts the next-higher-order multiplier bit in the low-order MQR bit position, determining whether or not it should add a value during the next iteration of the algorithm.

A Software Approach to Multiplication

Most computers do multiplication through software. It's a simple matter to type in PRINT 45*96 in Basic and watch the result instantly appear. The Program Listing shows a Z80 Assembly-language subroutine that performs 8- by 8-bit multiplication, with a 16-bit product. The processor passes the multiplicand in the accumulator and passes the multiplier in the E register. The processor returns the product in the D/E register pair; it returns all other registers unaffected.

The subroutine follows the multiplication algorithm given above. It uses the C register as the MDR, the D register as the AC (though the actual addition takes place in the Z80's accumulator), and the E register as the MQR.

Two Hardware Approaches To Multiplication

While the software approach to multiplication is adequate for most applications, many applications still require the increased speed of hardware multiplication. Even processors with internal multiply and divide instructions can often benefit from faster multiplication or division circuitry. While about 1 percent of the run-time instructions executed in such systems involve multiplication and

division, they typically use about 10 percent of the processing time.

Two hardware approaches exist for multiplication: the sequential multiplier and the parallel (combinational) multiplier. The sequential multiplier is by far the more common and economical. All microprocessors with internal multiplication instructions use this approach, as do math coprocessors and slave processors.

I'll discuss each of the hardware approaches below and describe a 4- by 4-bit multiplier to illustrate how they work.

The Sequential Multiplier

The sequential multiplier implements the multiplication algorithm described above in hardware. A state machine specifies each operation of the sequential circuit. The circuit also consists of a synchronizing clock, a counter, a full-adder, and some shift registers, along with some miscellaneous support circuitry.

Figure 4 shows the schematic diagram for a 4- by 4-bit sequential multiplier (see Parts List 1). The completed circuit appears in Photo 1. You can also choose options for the oscillator (see Fig. 5). Since I designed this board for illustration, I suggest option A because it lets you single-step through the multiplication process, one clock cycle at a time. This is done by using a momentary contact SPDT button switch, the same type of switch used for the Load function. I used light-emitting diodes (LEDs) for displaying the products (see Fig. 6). Note that an LED goes on for a zero value.

You'll notice two four-position DIP (dual in-line package) switches in Fig. 4, one for the multiplier and one for the multiplicand. When you press the load button, the processor loads the multiplier into the 74LS95 shift register (used as the MQR). It also clears the 74LS195 (used as the AC) and the 74LS74 (used as the Carry regis-

ACCOUNTING FOR MICROS

\$325 Set of Three

\$395 Set of Four

\$465 Set of Five

ACCOUNTING FOR MICROS is a set of integrated accounting programs which meet professional standards. They're fast and easy to use, with complete instructions. Our manual (shown above) also includes helpful information on bookkeeping and computers.

GENERAL LEDGER **\$125**
 Allows up to 1,000 accounts & 1,000 transactions/month. Retains month-end balances for Last Year, This Year and Forecast. Includes Cash Disbursements, Cash Receipts and General Journals. Reports include Balance Sheet, Income Statement, Annual Summary and Journal Report.

ACCOUNTS RECEIVABLE **\$125**
 Allows up to 2,500 customers and 1,000 invoices per month. Invoicing can access Inventory Module. Keeps customer names and addresses. Invoice prints on plain paper or any pre-printed form. Statements can be printed at any time.

INVENTORY **\$125**
 Allows up to 4,000 parts. Keeps 3 month history of unit sales as well as year to date. With AR, can

be used as point of sale system (prints invoices, handles cash). Reports include Inventory Value and Stock Report, Internal and Customer Price List.

ACCOUNTS PAYABLE **\$125**
 Allows up to 500 vendors and 600 invoices/mo. Records invoices and handwritten checks. Prints computer checks on any pre-printed form. Keeps vendor names and addresses.

PAYROLL **\$125**
 Will handle up to 100 employees with six deductions per employee. Deductions may be determined as fixed dollar amounts or percentages, or referred to a table for automatic look-up. Tax tables are easily entered, or purchased separately.

RUN ON MOST CPM AND MS-DOS

- Apple CPM - IBM PC, AT, PS/2
- Columbia Kaypro (all)
- Compaq Morrow (all)
- Osborne (all)
- Panasonic
- Radio Shack (all)
- Other compatibles

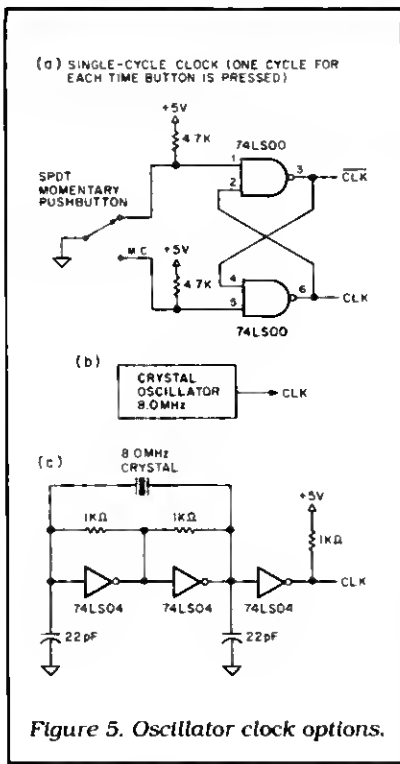

Figure 5. Oscillator clock options.

ter). When you release the button, the computer sets the A bit to indicate that it will begin multiplication. The 74LS283 4-bit full-adder does the additions, and the multiplicand DIP switches act as the MDR. Also, the 74LS93 functions as the counter. I've described the function of the 74LS157 below.

The 74LS73 J-K flip-flops are the basis of the state machine. The outputs of these flip-flops define the activity of the circuit at any given time. The three states are defined as follows:

- S1 S0 Activity
- 0 0 Idle
 - 0 1 Add the output of the 74LS157 to the 74LS195
 - 1 1 Shift the Carry/74LS195/74LS95 register right one bit position

If you use the single-cycle clock approach, you'll find it especially helpful to connect the S0 and S1 signals to light-emitting diodes to show the current system state. At power-up, you should step the clock until you reach the 00 idle state. At this point, the computer should set the binary numbers you want multiplied on the DIP switches (a closed

switch represents a zero bit) and you should push the load button to initialize the circuit. After you release the button, the next clock cycle changes the state from 00 to 01. It takes eight clock cycles to complete the multiplication. Afterwards, the 8-bit product appears on the outputs of the 74LS195/74LS95 double-precision register and the state machine returns to idle.

The circuit deviates slightly from the multiplication algorithm given earlier. Instead of skipping the addition with a

CONVERT YOUR TRS-80 MODEL III OR 4 INTO A DEVELOPMENT SYSTEM

Now you can develop Z-80 based stand-alone devices such as games, robots, instruments and peripheral controllers, by using your TRS-80 as a development system. The DEVELOPMATE plugs into the expansion connector of your TRS-80 and adds **PROM PROGRAMMING** and **IN-CIRCUIT-EMULATION** capabilities to your system.

Complete instructions and sample schematics are included to help you design your own simple stand-alone microcomputer systems. THESE SYSTEMS CAN BE AS SIMPLE AS FOUR ICs: one TTL circuit for clock and reset, a Z-80, an EPROM, and one peripheral interface chip.

When the In-Circuit-Emulation cable is plugged into the Z-80 socket of your stand-alone system, the system becomes a part of your TRS-80. You can use the full power of your editor/ assembler's debug and trace programs to check out both the hardware and the software. Simple test loops can be used to check out the hardware, then the system program can be run to debug the logic of your stand-alone device.

Since the program is kept in TRS-80 RAM, changes can be made quickly and easily. When your stand-alone device works as desired, you use the Developmate's PROM PROGRAMMER to copy the program into a PROM. With this PROM and a Z-80 in place of the emulation cable, your stand-alone device will work by itself!

The DEVELOPMATE is extremely compact. Both the PROM programmer and the In-Circuit-Emulator are in one small plastic box only 3 1/2" x 5 1/4". A line plug mounted power supply is included. The PROM programmer has a personality module which defines the voltages and connections of the PROM so that future devices can be accommodated. However, the system comes with a universal personality module which handles 2758(2508)(8K), 2716(2516)(16K), 2532(32K), as well as the new electrically alterable 2816 and 48016(16K EEPROMs).

The COMPLETE DEVELOPMATE III with software, power supply, emulation cable, TRS-80 cable, and "universal" personality module, is ONLY \$329!
 PM2 PERSONALITY MODULE for 2732A EPROM \$15
 PM3 PERSONALITY MODULE for 2764 EPROM \$15

low-order MQR bit of zero, the computer switches the outputs of the 74LS157 to the value zero (instead of the multiplicand value) and then adds zero to the current 74LS195 value; it also clears the Carry register (74LS74).

The algorithm given earlier would require at most n (but generally fewer) additions for the multiplication. In the circuit in Fig. 4, however, the algorithm always makes n additions, though sometimes it adds only the value zero.

It would, of course, be better to include the additional circuitry needed to follow the algorithm given earlier precisely, since this would take fewer clock cycles (on the average) and since speed is the name of the game. For illustrative purposes, however, the circuit in Fig. 4 works well.

The Parallel Multiplier

The parallel multiplier approach is much faster than the sequential multiplier although the parallel system requires more circuitry (see Photo 2). This approach involves the use of combinational logic and requires no synchronization clock. This approach merely extends the multiplication algorithm using additional hardware for the successive shifts and additions, instead of doing these operations sequentially.

Figure 7 shows the schematic for a 4-by-4-bit parallel multiplier (see Parts List 2). As shown, it has four 74LS157 quad 2-to-1 switches at the top. The inputs to each of these switches are identical, except the select (S) inputs, on pin 1. Each select input connects to a bit of the multiplier, with the low-order multiplier bit selecting the far right 74LS157 input, and the high-order multiplier bit selecting the far left 74LS157.

When the select input is high (a 1) the multiplicand value appears at the outputs of the '157; when the select input is low (a zero), the value zero appears at the outputs of the '157. The low-order bit of the low-order '157 is bit zero of the product (P0). The 3 high-order bits go into a 74LS283 4-bit full-adder. The output of the second '157 also goes to the '283, and their sum appears at the output of the '283. The low-order sum bit is then bit 1 of the product (P1), and the three high-order sum bits, plus the carry, go into the next '283, along with the outputs of the next '157. This process continues through the third full-adder, which provides the 5 high-order product bits.

You should note how the output of one stage is the input to the next stage, which the processor shifts left one bit position. Since there is a full-adder at each stage, the computer makes shifts and adds by the logic configuration. The multiplication time, then, results from

merely the propagation delays through the chips. Using LS devices, the typical multiplication time is around 50 nanoseconds. This time drops to just a few nanoseconds when you use high-speed logic.

While the sequential multiplier circuit is more complex than the parallel multiplier, it is more useful with practical word sizes (e.g., 16- by 16-bit multipliers). The sequential circuit would require wider shift registers and a wider adder (and a carry look-ahead genera-

tor). The parallel multiplier, however, not only requires wider switches and adders, but many more of them (n 2-to-1 switches and $n-1$ adders). You can, however, get parallel multiplier chips from companies like TRW. ■

ALSO AVAILABLE FOR THE TANDY 1000, 1200 AND 2000

ADD THE PICDISC TO YOUR PORTABLE* AND GET DESK TOP COMPUTER PERFORMANCE

SOFTWARE FEATURES:

- The industry standard CP/M 2.2™ operating system, which provides for access to all popular CP/M based software (including dBASEII™, Supercalc™, and T/Maker™).
- Complete Utilities Package includes:
 Filer — A menu driven LOAD/STORE program for transferring individual files (or total memory) to disc
 Modem — Public domain communications package (both terminal and disc file transfer modes)
 Utilities — DISKCOPY, COPY, FORMAT, and CP/M Utilities.

HARDWARE FEATURES:

- Lightweight (4.5 lb.) battery powered 3.5 inch micro-floppy system.
- 360K bytes/diskette (same as on the IBM PC).
- Approximately 20 hours on a single battery charge assuming normal disk access.
- 32K bytes additional RAM in the PICDISC — converting your portable to a 64K byte CP/M 2.2 microcomputer.
- Includes all cables, mounting hardware and battery charger.

Complete Hardware/Software System described above — Only \$599

SAVE ON POWERFUL INTEGRATED SOFTWARE

— when purchased with PICDISC:

T/Maker — an integrated software package that provides:

- Word Processing
- Spelling Checker with a 50,000 word Dictionary
- Spreadsheet
- Relational Database Manager

Complete System above with T/Maker for \$799 (T/Maker sold separately for \$300)

*Immediately available for the TRS-80 Model 100 (portable must have 32K bytes RAM) and the NEC8201 and OLIVETTI OM-10 pending FCC approval.

Tracking MS-DOS: The 1000 and Other Species

I didn't name this column. In fact, I didn't like the idea. I am, after all, a modest person. I argued with my boss. I even appealed to his self-interest, pointing out that he could never get rid of me as long as the column continued. "I can always find another guy named Dave," he replied.

The subject is Tandy's MS-DOS machines. I'll focus on the 1000, because I use one and am comfortable with it, but I'll also discuss the 2000. The 1200 will receive the least treatment because it's the most IBM PC-compatible and has the fewest idiosyncracies. In spite of the title, I'll range beyond MS-DOS itself, and cover such topics as GW-Basic and commercial software and hardware.

I'll provide hints, tips, and advice that will help you get more out of your machine and, perhaps, give you some intellectual satisfaction. I'll discuss both Basic and 8088 Assembly-language programming. I'll also pass along my experiences with significant and interesting MS-DOS products. For instance, I'm eager to find out how the MS-DOS version of Powersoft's Super Utility compares with the Norton Utilities.

I expect to spend much of my time experimenting and playing. However, I'm hoping that *80 Micro* readers will provide much of the material that goes into the column. Your problems, suggestions, and hints will be my guidelines. What information do you need? What bugs are driving you crazy? What products impress you the most? I'll try to solve some problems, but I also expect to hear from readers who have solutions to pass on. I can't provide financial reward for hints and patches, but I'll give you credit in print.

Printer Praxix

In my June article on the Model 1000 ("The Tandy 1000 Tip Sheet," p. 38), I reported that the Okidata Microline 80

Star demonstrates how to build up your spreadsheet figures without pumping up your budget.

Watch those numbers work out! With Star's beefed-up business printers you'll see a physical difference in your figures.

For strength of characters, there's the outstanding near-letter-quality printing of our "S" series. Just flip a switch and each "S" printer kicks into a faster speed that changes from NLQ to draft. Every letter and number, in either mode, in excellent shape. It's a standard feature you'd pay extra for elsewhere.

Plus, with the muscle of our

20% increased throughput, these Star printers don't take breaths. They can print on and on using up to an unbeatable 16K memory for storage.

Now, if nothing less than letter-quality definition will do, there's the classic PowerType™ daisy-wheel printer. Or the SB-10, Star's letter-quality printer built with a second mode for high-speed draft and full graphics capability.

And of course every printer has Star's hefty one year warranty. And very lean price.

A powerful printer and a trim budget. Now that's the shape you should be in.

```

End

blew out the 1000's printer port. I subsequently received a fix from Jay Wyrick of Hollywood, FL. If you're comfortable wires on your printer's circuit boards, the modification is easy to make. It's also the method Okidata suggests. Tandy service centers can do the modification for you, too.

You eliminate the offending high voltages on pins 34 and 36 by cutting wire S6 and a lead to resistor R17. You can see both points from the back of the printer, to the left of the Centronics plug opening. Supposedly, the printer will function as usual with other computers.

I've heard of at least one use for the printer driver (LPDRVR.SYS) that comes on the 1000 DOS disk. Tom Siriani of Hillsboro, OR, discovered that having this driver installed as a device in the CONFIG.SYS file solved the "Out of paper" error when printing lines longer than 80 columns in Basic. (The other known solution is to use the Width statement; e.g., Width Print 255.)

Should you use the 1000 printer driver? I don't: I played with it using Basic to send control codes, and wasn't impressed. The DMP-120 with driver installed acted just like my Okidata 82A with or without the driver installed. It's definitely doing something because I could print and list lines longer than 80 columns with either printer.

I would be interested to hear from anyone who finds the driver useful. You can replace codes in its character translation table from Basic or from machine language (with an INT 17H, the Basic input/output system [BIOS] printer interrupt).

People's Assembler

If you can't afford an assembler and would like to try machine language, you already have the tools, EDLIN and Debug. This is how I've been managing: the small assembler in Debug is fine for short routines. I write source files with EDLIN (or a word processor) and use input/output redirection to force Debug to assemble the source file to an object file.

You can write Assembly-language code right in Debug, on the fly, but the trick is to have it assemble from a file that you can edit later. The text file must have all the keystrokes you would normally use in an assembling session with

Debug. Program Listing 1 is a small program that changes the screen to blue with bright white letters.

Type in EDLIN SCREEN.SRC and enter the text as listed, even the blank line. The first line names the output file (a .COM file), the second line starts assembly. Assembly continues up until the empty line, whose sole purpose is to end assembly.

The semicolons start comments that you can ignore, as does the assembler. This small program uses the BIOS video interrupt to set the whole screen as a window and null it with the white-on-blue attribute.

The RCX lets you change the contents of the CX register, which holds the number of bytes the program will write to disk. The W makes the program write all 11H bytes of assembled code to the file Screen.COM. Q is for Quit. To assemble the source file, type in:

```
DEBUG <SCREEN.SRC
```

Debug takes its input from the source file instead of the standard input (the keyboard). When you first write the source code, you must guess at all relative jump addresses and the number of bytes to put in CX.

I make a first pass, pressing the hold key when I want to make note of what a jump address should be and the number of bytes involved. I then edit the source file and reassemble. With complex routines, I make several passes, especially if a relative jump instruction suddenly becomes a byte longer. Then I have to debug.

Basic Sounds

I was experimenting with the GW-Basic Sound statements recently. You definitely need to learn a few things if you're used to the Sound statement on the Model 4 or 2000. The 1000's Basic sound has a range of 110 Hz to above hearing with adjustable volume on three voices (like the late PCjr). The Tandy 1000 Basic manual has the value ranges and polarities for the tone and duration parameters mixed up or just wrong. (The more I use this manual, the madder I get.)

Program Listing 2 demonstrates the abilities of the Sound statement. The up-

and down-arrow keys raise and lower the tone, while the left- and right-arrow keys lower or raise the volume (on the 1000 only). The program displays the present tone value in the middle of the screen. The arrow keys act through On Key event-trapping (see 1000 Basic article). The Sound On in line 10 is necessary. The "MF" puts the sound in the foreground.

On the 1000, you also get a Noise command (six types) and the Play command. The Play statement takes a string argument with up to 32 notes or rests. The variety of string arguments provides flexibility, and Tandy implemented them so that musicians can feel comfortable using them. You can play music as a background task while a program does other things. To facilitate this process, Basic provides event-trapping for the number of notes left in the music buffer. When it's near empty, an interrupt subroutine can refill the buffer.

Program Listing 3 shows how to use the Play statement with event-trapping to play music in the background as other program lines execute. Line 10 sets event-trapping to trigger with two notes left in the music buffer. You should adjust this value to the complexity of the foreground task. If it involves uninteruptable graphics that take a while to execute (like filling a large area with the Paint statement), you'll want to set the buffer trip level higher. However, setting the On Play() parameter higher means more frequently interrupting the foreground task. In the present case, a value of 2 in line 10 produced a noticeable break in the flow of the "music."

The string in line 30 sets the music in the background, as staccato, at the highest tempo and the second octave, then starts things off with the notes E, F, B, and A. The subroutine replenishes the music buffer with several repetitions of these four notes; they repeat endlessly while the screen fills with the text in the loop from lines 50-60. When the subroutine is active, screen printing halts momentarily, but the music plays without pause.

Program Protection

How much can you protect Basic programs from tampering or copying? The Save command has a protect option (Save "File",P) that saves a Basic program in an encoded binary format. The file is then protected from tampering, as you can't list, edit, or merge it. You can, however, load, run, or chain the program, as well as copy it. What more can be done?■

You can write to Dave Rowell at 80 Micro, 80 Pine St., Peterborough, NH 03458.

Good Form: A Close Look At Basic Program Structure

Like a story, a game of chess, or life itself, a Basic program has a beginning, middle, and an end. As you evolve as a programmer, your efforts become more intellectually complex, and you start to recognize the events and rhythms that mark these stages in a program.

For the sake of nonargument, suppose that Basic programs have only four fundamental forms, with these names:

Arrow—Linear in form, this Basic program shoots straight through its lines once and ends.

Skipper—This one jumps back and forth among line numbers.

Crucible—It returns again and again to one or more central testing areas whose products are sliced, diced, molded, and folded into results.

Choice—This type features a menu format in which you decide what part of the program to use. Choices lead to and from modular units, which you can think of as small crucibles within the main program.

I've listed these four program forms in the order in which most of us learn to use them. All require a start, middle, and end. Figure 1 shows a template that lumps subevents of these stages. I've keyed brief explanations to the line numbers in the template. The beginning of the program is its foundation.

*100—A remark line or lines. Traditional uses: Giving the program name, computer system, and memory requirements; author's name and address; copyright statement; and restrictions on use. You can run the program without this line.

*110—Data line. You don't need this line if you're not giving variable arrays values. It can go anywhere in the program but it traditionally comes first.

*120—CLS to clear the screen. Not necessary, but it's neat programming practice to start with a clean slate.

*130—A simple Clear statement sets nu-

(Model 1 add \$50.)

TRS-80 Hard Disk Subsystem Features*

- * All sizes reted after formatting
- * TRS-80 Models 1,3,4, and 4P supported
- * Your choice of DOSPLUS, LDOS, or TRSDOS 6.x Software Drivers included
- * Newdos 80/Version 2.5 Systems available.
- * Up to two secondary drives may be added.
- * Error checking and correcting controller.
- * Buffered seek drives for improved access time.
- * Built in power up diagnostics.
- * Drives use plated media for long disk life
- * Heavy duty power supply.
- * Fan cooled.
- * Gold connectors used throughout for high reliability.
- * 1 year warranty

Shop and compare. Hard Drive Specialist has been building hard drive systems for years and have sold thousands of subsystems to satisfied TRS-80 customers. We fully support TRS-80 Models 1,3,4, and 4P computers on available hard drive operating systems. We use the latest state-of-the-art drives and controllers. Our drives all use buffered seek logic and plated media to result in almost one-fourth the average access times found on our competitors drives. Plated media results in longer platter life and high resistance to head crashes not found on coated media drives. We utilize high construction throughout including heavy duty power supply, cooling fan and gold edge card connectors. We back our drives with a one-year parts and labor warranty and we're so sure that you'll like our drive that we offer a thirty day money back guarantee. So when it comes time to buy, look beyond the price and choose the best drive. After all, we are the Hard Drive Specialist!

HDS Multiplexer

\$1295.

The HDS Multiplexer allows the useage of up to 4 Model III or IV systems using Dosplus 3.5, LDOS, TRSDOS 6.x, and DOSPLUS IV on a HDS Hard Drive. The standard package includes the Master Control Unit, Host Adapters for 2 Computers and 40' of cable. Each additional Host adapter add \$150. Each additional foot of cable add \$1 up to 100 feet per computer.

Model 3/4 Boot Rom \$39.95

Allows you to boot directly from a HDS Hard Drive using DOSPLUS Versions available for useage with and without Multiplexer.

Tandy 1000 Hardware

Tandy 1000

TanPak

The first end only board that your Tandy 1000 may ever need. Your 1000 is very versatile, new applications and functions are being developed for it every day. And now with the HDS TanPak you can keep your options open for tomorrows technology. As you know the Tandy 1000 only has 3 expansion slots, and those are not quite PC compatible. The TanPak does the job using one expansion slot that normally would require four using Tandy boards. The TanPak includes a Serial Port, a Clock, and sockets for up to 512K of Memory Expansion. And the best part of all, it will save you some big bucks over the Tandy boards.

TanPak 128K \$399.

Radio Shack and Tandy are trademarks of Tandy Corporation, TanPak, and TanTall are trademarks of CompuKit Corporation

Hard Drive Kit

Put a 10 Megabyte Hard Drive inside your Tandy 1000. This Hard drive subsystem includes an interface card and a Half-Height Hard Drive that directly replaces a floppy disk drive in both size and power consumption drive.

- 10 Megabyte Internal Drive System \$895.**
- 10 Megabyte External Drive System \$1095.**
- 15 Megabyte External Drive System \$1395.**
- 30 Megabyte External Drive System \$1895.**

Disk Drives

Fast stepping add on or replacement disk drives for half the Radio Shack price **\$149.**

Listing 4 continued

meric variables to zero and string variables to nulls. The Clear statement offers options I won't go into because you don't need them at this stage.

•140—Define statements restrict variables to certain uses. Two examples are DEFSTR, as in DEFSTR A, which defines a letter as a string without that pesky dollar sign (e.g., A = "clown"), and DEFINT, as in DEFINT B, which thereafter makes a variable's value an integer of any fractional result.

•150—You can dimension arrays after you define them; for example, DIM A(20).

•160—Your program should read in array values at this point; for example, FOR X = 1 TO 20:READ Z\$(X):NEXT X.

•170—This is a good place to set all beginning values of variables; for example, M = 20.20:L\$ = "line".

•180 and 190—The title and instructions are up to you, but they are well placed as the final events in program start-up. Your first program was probably of the arrow form, which generally runs straight through its lines and waits like a smug puppy to perform again:

```

100 REM *My First Program
110 PRINT "Look, Ma, I'm dancing!"
120 END
    
```

That same form can have its pragmatic uses, if it yields some result. See Program Listing 1. Job Aptitude Test. It's a tongue-in-cheek test, but it does illustrate the form: a series of questions whose answers the program keeps track of and acts on. You might use this format to give a test with multiple-choice answers, and to gather information for forms, such as employee files, inventory records, insurance claims, and the like.

Start: Initialization

- 100 Data line.
- 120 Clear screen.
- 130 Clear statement.
- 140 Define statement(s).
- 150 Dimension arrays.
- 160 Read in array values.
- 170 Set variable values.
- 180 Title screen.
- 190 Instructions.

Middle: Actuation

- 200 The program works on data supplied by the user and/or itself.

End: Realization

- 210 The result of work done in the middle phase is given and the program ends.
- 220 Subroutines.

Figure 1. Program template.

BASIC TAKES

Listing 4 continued

```

300 PRINT
310 PRINT "Tap a number to make selection."
320 QS=INKEY$
330 IF QS="" OR INSTR("123456",QS)=0 THEN 320
340 PRINT
350 C=VAL(QS)
360 ON C GOSUB 300,400,420,440,460,480
370 GOTO 230
380 PRINT "Type choice for APPETIZER and press enter."
390 INPUT B(C): RETURN
400 PRINT "Type SOUP choice and enter."
410 INPUT B(C): RETURN
420 PRINT "Select SALAD and enter."
430 INPUT B(C): RETURN
440 PRINT "ENTREE selection (and enter)"
450 INPUT B(C): RETURN
460 PRINT "Enter a BEVERAGE."
470 INPUT B(C): RETURN
480 PRINT "DESSERT selection."
490 INPUT B(C): RETURN
500 END
    
```

End

Menu (Program Listing 4) is about food, but remember that the menu of Basic pertains to listing user choices, not culinary decisions. This menu about food illustrates how you can, in this case, plan a meal by adding and replacing elements. Lines 260-280 contain a loop that prints menu choices. Line 320 invites a choice from 1 to 6, and the INSTR test in line 330 prevents any answer except 1 through 6. Line 360 sends the program to the appropriate area for action. This line is a good Basic command to learn, for it shortens otherwise messy decisions.

In a more complex menu program, you might have choices to load material to and from disk, to sort, add, delete, line print items meeting tests set within the program, and more. There's always more.

I'm not claiming that these four forms encompass all of Basic programming. However, when you study program format, I think you'll find many examples that neatly fit these ideas. The four examples should give you a clue to your Basic progress. If you are just arriving at the arrow stage, take heart. The journey ahead grows more interesting. ■

Contact Richard Ramella at 1493 Mountain View Ave., Chico, CA 95926.

Figure 2. The map for Gumball Route.

It's really critical path scheduling.

The program I've written finds the best possible answer it can by bumbling along the route. Watch the program run. Read the listing's events. I think you'll see what happens. The program will continue to search for a shorter route until you break into it to stop it. I should warn you that even mildly complex critical path simulations might take longer to produce good results than you have time to wait.

So, the arrow form of programming is simplistic and of limited effectiveness. The skipper has its charm but it's difficult to form. We come to my favorite, the crucible. It's the quintessential Basic program format. You might use hundreds of lines to set up the situation, and the crucible focuses on one small area, bringing all force to bear on one or more crucial program events.

Now that I've made it sound mystical, let me deflate myself by offering a lowly example. It's Interest (Program Listing 3). Look at lines 210-240. They contain a For...Next loop that prints the building result of an investment. It could loop a million times if asked. It is the crucible of the program, and it is also the result.

In studying programs written by others, look for that crucible to get a quick understanding of what happens and why. Problems with the crucible? Some programs include so many GOSUBs, lf...Then tests, changing values, and actions that they slow run time measurably. A program performing 50 tests within a crucial area can turn a run into an ice jam.

Now for the choice. It's also called a menu program. It gives you a screen menu from which the program goes on command to a subevent—and returns to the menu. GOSUB and GOTO trigger these forays. A menu program can be speedy because it avoids program areas not needed at the moment.

The arrow is a simple and useful form on which a beginner can build.

The next beginner's discovery is the skipper, and programming life temporarily becomes a merry series of GOTOs. The skipper can create problems because it's tough to keep control of all the action. It demands precision and attention. Making a skipper work can be disheartening.

The example I've used, Gumball Route (Program Listing 2), is a computer solution to the problem in Fig. 2. That figure shows the mileage among six towns: A, B, C, D, E, and F. The gumball route driver's goal is to start at A, visit each site, and return to A in the shortest possible route. Traditionally, this is called the Traveling Salesman Problem.

Wide Open: Windows for Your Model 4

With this month's program, I'll complete my Model 4 windowing system. The Program Listing is the system's user interface: it lets you redefine a window or invoke any TRSDOS library command at any time without destroying the screen contents.

Assemble this month's program as WU/FLT. Then, provided you named the first program WD/CMD (see the June Next Step, p. 102) and last month's program WS/CMD (see p. 100), you can install the entire windowing system from the TRSDOS Ready prompt with these commands:

```
WD
WS
SET *WU WU
FILTER *KI *WU
```

The first line puts the window driver in place, the second adds the windowing supervisory call (SVC), and the last two lines link this month's user routine to the keyboard driver. As each module loads, it prints an appropriate message on the screen.

When you have all three programs up and running, you can press control-W at any time and a block of information will appear at the top of the screen telling you the row and column parameters of the present window as well as how many windows sit in an alternate memory bank.

The program gives you the option of opening a new window, closing a window and returning to the one below it, calling a DOS command, or returning to the present window and the program running there. Programs that display text with the @DSPLY and @DSP SVCs will stay within whatever windows you set. Those that transfer blocks of data directly to the screen or move the cursor to specific locations may not.

BUSINESS 100 PROGRAM LIST

NAME	DESCRIPTION
1 RULE7B	Interest Apportionment by Rule of the 78's
2 ANNU1	Annuity computation program
3 DATE	Time between dates
4 DAYYEAR	Day of year a particular date falls on
5 LEASEINT	Interest rate on lease
6 BREAKEVN	Breakeven analysis
7 DEPRSL	Straightline depreciation
8 DEPRSY	Sum of the digits depreciation
9 DEPRDB	Declining balance depreciation
10 DEPRDDB	Double declining balance depreciation
11 TAXDEP	Cash flow vs. depreciation tables
12 CHECK2	Prints NEBS checks along with daily register
13 CHECKBK1	Checkbook maintenance program
14 MORTGAGE/A	Mortgage amortization table
15 MULTMON	Computes time needed for money to double, triple, etc.
16 SALVAGE	Determines salvage value of an investment
17 RRVARIN	Rate of return on investment with variable inflows
18 RRCONST	Rate of return on investment with constant inflows
19 EFFECT	Effective interest rate of a loan
20 FVAL	Future value of an investment (compound interest)
21 PVAL	Present value of a future amount
22 LOANPAY	Amount of payment on a loan
23 REGWTH	Equal withdrawals from investment to leave 0 over
24 SIMPDISK	Simple discount analysis
25 DATEVAL	Equivalent & nonequivalent dated values for oblig.
26 ANNUDEF	Present value of deferred annuities
27 MARKUP	% Markup analysis for items
28 SINKFUND	Sinking fund amortization program
29 BONDDVAL	Value of a bond
30 DEplete	Depletion analysis
31 BLACKSH	Black Scholes options analysis
32 STOCVAL1	Expected return on stock via discounts dividends
33 WARVAL	Value of a warrant
34 BONDDVAL2	Value of a bond
35 EPSEST	Estimate of future earnings per share for company
36 BETAALPH	Computes alpha and beta variables for stock
37 SHARPE1	Portfolio selection model i.e. what stocks to hold
38 OPTWRITE	Option writing computations
39 RTVAL	Value of a right
40 EXPVAL	Expected value analysis
41 BAYES	Bayesian decisions
42 VALPRINF	Value of perfect information
43 VALADINF	Value of additional information
44 UTILTY	Derives utility function
45 SIMPLEX	Linear programming solution by simplex method
46 TRANS	Transportation method for linear programming
47 EOQ	Economic order quantity inventory model
48 QUEUE1	Single server queuing (waiting line) model
49 CVP	Cost-volume-profit analysis
50 CONDPF	Conditional profit tables
51 OPTLOSS	Opportunity loss tables
52 FQOQ	Fixed quantity economic order quantity model
53 FQEOQWSH	As above but with shortages permitted
54 FQEOQPB	As above but with quantity price breaks
55 QUEUECB	Cost-benefit waiting line analysis
56 NCFANAL	Net cash flow analysis for simple investment
57 PROFIND	Profitability index of a project
58 CAPI	Cap. Asset Pr. Model analysis of project

59 WACC	Weighted average cost of capital
60 COMPBAL	True rate on loan with compensating bal. required
61 DISCBAL	True rate on discounted loan
62 MERGANAL	Merger analysis computations
63 FINRAT	Financial ratios for a firm
64 NPV	Net present value of project
65 PRINDLAS	Laspeyres price index
66 PRINDPA	Paasche price index
67 SEASIND	Constructs seasonal quantity indices for company
68 TIMETR	Time series analysis linear trend
69 TIMEMOV	Time series analysis moving average trend
70 FUPRINF	Future price estimation with inflation
71 MAILPAC	Mailing list system
72 LETWRT	Letter writing system-links with MAILPAC
73 SORT3	Sorts list of names
74 LABEL1	Shipping label maker
75 LABEL2	Name label maker
76 BUSBUD	DOME, business bookkeeping system
77 TIMECLCK	Computes weeks total hours from timeclock info.
78 ACCTPAY	In memory accounts payable system-storage permitted
79 INVOICE	Generate invoice on screen and print on printer
80 INVENT2	In memory inventory control system
81 TELDIR	Computerized telephone directory
82 TIMUSAN	Time use analysis
83 ASSIGN	Use of assignment algorithm for optimal job assign.
84 ACCTREC	In memory accounts receivable system-storage ok
85 TERMSPAY	Compares 3 methods of repayment of loans
86 PAYNET	Computes gross pay required for given net
87 SELLPR	Computes selling price for given after tax amount
88 ARBCOMP	Arbitrage computations
89 DEPRSF	Sinking fund depreciation
90 UPSZONE	Finds UPS zones from zip code
91 ENVELOPE	Types envelope including return address
92 AUTOEXP	Automobile expense analysis
93 INSFIL	Insurance policy file
94 PAYROLL2	In memory payroll system
95 DILANAL	Dilution analysis
96 LOANAFDD	Loan amount a borrower can afford
97 RENTPRCH	Purchase price for rental property
98 SALELEAS	Sale-leaseback analysis
99 RRCONVBD	Investor's rate of return on convertible bond
100 PORTVAL9	Stock market portfolio storage-valuation program

- TRS-80 Cassette Version \$99.95

Listing continued

If you plan to use a job control language (JCL) file to set up the window system, you should make a small change in the window driver program from June 1985. Near the end of the program, add a line just before the @EXIT SVC that returns control to TRSDOS. The new line should read LD HL,0. Without this line, the JCL thinks the program is reporting an error and aborts.

The User Interface

This month's program is a keyboard filter, with a structure similar to the one I presented in November 1984 (p. 168). The computer calls the filter every time a program asks TRSDOS for keyboard input. If you press control-W, this filter springs into action; otherwise, it passes whatever key you pressed back to the calling program.

The beginning of the program first checks to verify that you've pressed a key, then tests to see if the key is a control-W, and finally checks to ensure that you don't already have the filter running. Without this final check, chaos could result; the filter could end up calling itself over and over, unable to get back to the program that originally called it.

THE NEXT STEP

Once it finishes the tests (line 96), the program sets a flag to show that it's operating. Then it saves the primary and index registers and, by using the window SVC, gets the parameters of the present window.

If the window storage area is full, control returns immediately to the calling program because you can't open any new windows. Otherwise, the program translates the present parameters into ASCII decimal and saves them in display strings. Next, the program sets up its own display window at the top of the screen, clears it, displays the command prompts, and waits for you to press one of four input keys (lines 148-159). It loops until you press a key, then jumps to the appropriate routine.

If you choose to return to the running program, the routine labeled Done (lines 161-177) closes the prompt window, restores the previous condition of the screen and the Z80's registers, then exits as it signals to the calling program that you haven't pressed a key.

The routine to close a window is also very simple. It closes the prompt window and jumps to Done to close the top user window before returning to the running program.

The other two routines are more complex. The DOS routine (lines 183-233) begins by closing the prompt window. Then it saves the current state of the C flag before setting it to allow only DOS library commands.

The DOS routine uses the @CMNDR SVC to send a command to the system for execution, but there is a fundamental problem with using that SVC from a filter. The System commands in TRSDOS use two overlay areas: SYS1-SYS5 and SYS10-SYS12 use the first, 1E00-22FF hexadecimal (hex). The library commands in SYS6 through SYS8 use the second overlay area, 2300-2FFF hex. TRSDOS stores a value at 0069 hex to keep track of the overlay currently in memory. Normally, you can use @CMNDR from a running program without problems. However, if you do so from an input/output filter, the system call might change the contents of the low overlay area. When the filter returns control to the normal input/output path, the routines it expects in the low memory will no longer be there. As a result, your system will crash, sometimes with strange sounds emanating from the internal speaker, sometimes with a frozen display, and sometimes with the disk drives running for no apparent reason.

Therefore, a filter that might cause the low overlay area to change must restore that section of memory before exiting back to the system. I'm sure there must be a way to use TRSDOS routines to per-

BRICKWARE

If you invest in brick and mortar, then you should invest in our brickware, Investor III™. Designed by real estate professionals to work on the IBM PC or TRS-80, Investor III™ is a comprehensive software package that aids in investment analysis of property, whether commercial or residential, small or large. It shows both the tax and cash aspects of an investment opportunity and is flexible enough to allow you to vary a number of key assumptions (such as cash flow, phased investments, multiple mortgages, and tax parameters) and see the results in an instant. So if you are serious about brick and mortar, look at our brickware. It will help you lay a solid foundation for your investment strategy. Contact your local dealer.

form the restore, but I haven't found it yet. So, this program stores the entire low overlay area in a buffer, as well as the byte that indicates what overlay is in memory.

The remainder of the DOS routine is simple. It opens a full-screen window and prompts you for a DOS command. The routine passes that command to the system, and a loop returns for another command until you stop it by pressing the break key. Then the program restores everything in low memory to its previous state and loops back to the prompt window.

The final routine opens a new display window (lines 235-283). It clears the prompt area and asks you for the new window parameters.

The only difficult part of this section is accepting the ASCII decimal values you type in and changing them to the binary format the computer requires. The GET RC routine (lines 285-298) does most of the difficult part.

If you enter illegal values or press the break key while entering the parameters, the program returns to the prompt window for further instructions. Otherwise, it opens the new window and exits to it.

The installation section of the program (lines 360-467) does nothing tricky. This program relies on last month's windowing SVC, so it first checks to be sure you've installed that SVC. Since the user interface is a filter, it must also test to see that you used the Set command to load it.

If everything has gone well, the computer moves the main program to high memory and protects it; then the program sets its device control block to show that the filter is capable of handling @GET and @CTL commands. Finally, the initialization section reports a successful installation and returns control to TRSDOS.

Final Comments

The windowing system is the most extensive set of programs I have presented in The Next Step. Depending on your programming needs, you may want to use just the driver, the driver and windowing SVC, or all three for particular projects.

The windows work well with some programs, poorly with others. You'll have to experiment to see how they work with your Model 4 programs. If you wish, you could use the first two programs to create a system of pull-down menus. Also, with a few changes, you could use the second program to create two active windows on the screen at once.

If you develop any interesting applications with the window system, I'd enjoy seeing them on a disk, along with your source code if possible. Please re-

THE NEXT STEP

member that *80 Micro* owns the copyright to this windowing system: if you want to distribute any programs based on it, you'll have to take care of some legal formalities first.

A set of programs this complex probably has a bug or two in it. If you find one, write to me and describe in detail what I can do to demonstrate the bug. If you find any major bugs, I'll be sure to include patches in a future column. Please remember, however, that there's a lag time between when I write a column and when you see it. I finished this column during the first week of April. If I hear of a major bug in August, you might not read about it until early next year. ■

You can contact Hardin Brothers through CompuServe. Go PCS-117 to the Writers' and Editors' SIG (WESIG) and leave your message addressed to him. Feel free to join in discussions started by others.

You can also write to Hardin at 280 N. Compus Ave., Upland, CA 91786. Enclose a stamped, self-addressed envelope if you want a reply.

Communications Gap? LET'S TALK™!

LET'S TALK CLOSES THE COMMUNICATIONS GAP BETWEEN TODAY'S POPULAR PERSONAL COMPUTERS.

LET'S TALK is a complete package for fully supported communications between any of these computers. In any direction. Without additional expense.

LET'S TALK is a simple, straightforward program that transfers ASCII data files, including BASIC and VisiCalc®, from one computer to

another. Precisely. Easily. Without professional, expensive data processing expertise.

LET'S TALK allows two computers to communicate directly with each other in a "conversational mode" when not actually transferring data. And, LET'S TALK can send or retrieve files of any size from unattended

computers, at three different speeds.

GROWTH AND EXPANSION REQUIRE OPEN COMMUNICATION. LET'S TALK.

Making dollars and sense out of information.

Now available at Radio Shack stores through Express Order Software Program.

TRS-80 is a registered trademark of Tandy Corporation. Tandy 2000 is a trademark of Tandy Corporation. Visi Calc is a registered trademark of VisiCorp. IBM PC and PC XT are registered trademarks of IBM Corporation. COMPAQ is a trademark of Compaq Computer Corporation.

LET'S TALK includes all diskettes for each of the above computers. Suggested retail price \$179.00 + \$5.00 shipping

FAST HARD DISK BACK UP

**FOR TANDY
II/12/16/6000
(TRSDOS™, XENIX®,
or CP/M®)**

How much would you lose if a power failure, hardware glitch, or other disaster damaged or destroyed your hard disk data files? How long would it take to reconstruct them? How would the loss affect your business?

SNAPBACK can't prevent a disaster. But it can back up your hard disk so quickly and inexpensively that you can always be prepared for the worst. This is possible because SNAPBACK is...

- **FAST.** It copies 1.5 (Mod. II) to 2.4 (Mod. 12/16/6000) Mbytes of data per minute to 8" floppy disks. Thus, you can back up a 15 Mbyte drive in as little as 7-8 minutes
- **FLEXIBLE.** It works with any Model II/12/16/6000, any 8.7/12/15/35 Mbyte Tandy drive, and any XENIX, TRSDOS, and/or CP/M data.
- **EASY.** Its menus make it a snap to back up or restore your data (with optional verification).
- **INEXPENSIVE.** It only costs \$125.00.

If you value your data, you need SNAPBACK. It's the best insurance available.

The SNAPBACK package includes two bootable disks and complete documentation. To order, phone or write today.

(Mastercard, VISA, Check, or UPS COD [\$2] accepted. Add \$7.50 for handling/shipping. CA residents add 6% sales tax.)

**FOR TRS-80 MODELS 1, 3, 4, 4P
 IBM PC/XT, AT&T 8300, ETC.**

THE COMPLETE FORTH GETS A MAJOR UPDATE: MMSFORTH V2.4

- A total software environment: custom drivers for printer, video and keyboard improve speed and flexibility. (New TRS-80 M.4 version, too!)
- Common SYS format gives you a big 395K (195K single-sided) per disk, plus a boot track!
- Common wordset (79-Standard plus MMSFORTH extensions) on all supported computers.
- Common and powerful applications programs available (most with MMSFORTH source code) so you can use them compatibly (with the same data disks) across all supported computers.
- Very fast compile speeds and advanced program development environment.
- A fantastic full-screen Forth Editor: Auto-Find (or -Replace) any word (forward or back), compare or Pairs-Edit any two ranges of blocks, much more.
- Temporary dictionary areas.
- OUNANS, VECTs, vectored I/O, and many more of the latest high-performance Forth constructs.
- Manual and demo programs are bigger and better than ever!
- Same thorough support: Users Newsletter, User Groups worldwide, telephone tips. Full consulting services.
- Personal Licensing (one person on one computer) is standard. Corporate Site Licensing and Bulk Distribution Licensing available to professional users.

MMSFORTH

IT'S BETTER THAN EVER.

The total software environment for IBM PC/XT, TRS-80 Model 1, 3, 4 and close friends.

- Personal License (required):
MMSFORTH V2.4 System Disk \$179.95
(TRS-80 Model 1 requires lowercase, DOEN, 1 40-track drive.)
- Personal License (additional modules):
FORTHCOM communications module \$ 49.95
UTILITIES 49.95
GAMES 39.95
EXPERT-2 expert system 69.95
OATAHANDLER 59.95
OATAHANDLER-PLUS (PC only, 128K req.) 99.95
FORTHWRITE word processor 99.95
- Corporate Site License
 Extensions from \$1,000
- Bulk Distribution from \$500/50 units.
- Some recommended Forth books:

SAVE A BUNDLE

WITH ONE OF OUR BUNDLES

We have put together special bundles of software just in time to save you a bundle of money. Didn't you ever wonder why CP/M was so popular? The reason is the software availability. All programs (except EP) are for the Model 4/4P and have been optimized to install and run without hassle. For example, we have memory-mapped WordStar® and it runs circles around the standard version available elsewhere. We also added printer drivers for the Daisywheel II and the DMP-2100. Our CP/M® 2.2 is the best around. Read the reviews. You know the programs. You know the prices. This is the years' best value. You owe it to yourself to let these CP/M® programs and thousands of others (many in the public domain) start serving your needs.

Bundle #1
 WordStar®
 MailMerge®
 SpellStar™
 StarIndex™
\$299
 Delivered
 Montezuma Micro CP/M®
 RETAIL VALUE \$1009

Bundle #5
 Electric Pencil™
 Red Pencil™
 Blue Pencil™
\$149
 Delivered
 Works with TRSDOS, NEWDOS-80,
 DOSPLUS and MULTIDOS
 (Model 1,3,4)
 RETAIL VALUE \$240

Bundle #2
 WordStar®
 DataStar™
 ReportStar™
 CalcStar™
\$399
 Delivered
 Montezuma Micro CP/M®
 RETAIL VALUE \$1354

MONTEZUMA'S REVENGE

MODEL 3 UPGRADE

112K - CP/M - 80 COLUMN

This month Monty offers the deal of the year. The **Montezuma VM-80** is the only plug in printed circuit board which expands the **Model 3** display to 84 lines of 80 characters and allows operation of the **CP/M 2.2** operating system with a **56K TPA**. Both **80 & 24** and **64 x 16** modes are available from **TRSDOS** and **BASIC**. Reads and writes 18 different disk formats (Kaypro, Osborne, etc.) a total of 112K of RAM. The extra **48K** RAM can be set up as a **RAM disk** through software routines that are furnished with the supplied **CP/M** operating system. The **VM-80** comes complete with easy to follow installation instructions and operational documentation. No trace outs or soldering required. Guaranteed for one year parts and labor. Monty can ship this today.

MONTE'S SPECIAL PRICE.....\$279

Add WordStar 3.3 ready to run for \$100

"WE KEEP YOU RUNNING"

SOFTWARE

Note: It is Radio Shack policy that not all multiple-computer software packages contain disks for all models. Optional disks are available at slight extra charge. See ads for details when you order.

Cash Crop: Bond Yield to Maturity

by L. H. Southmayd

While VisiCalc's built-in functions meet most of my needs, they don't handle common financial calculations like yield to maturity (YTM) or internal rate of return (IROR). These functions require solving nonlinear equations by iterative methods; that is, by trial and error. Lotus 1-2-3's @IRR function is only a partial solution; you still must guess a value to initiate the trial-and-error process.

My template, BondYTM, calculates yield to maturity for standard and zero-coupon bonds; this is the return on your investment, incorporating the interest paid and any capital gain or loss you realize when the bond matures or when you sell it.

The template uses functions available with VisiCalc and which are compatible with Lotus 1-2-3. Because BondYTM uses the secant method to solve the nonlinear equation, it's efficient and fast. Also, you don't have to supply estimated YTM's to start the calculation; the formula does that for you.

Template Features

Figure 1 shows a sample calculation. Rows 7-13 and 16 of column C represent the input area, where you enter data about the bond you're evaluating. The settlement date is when payment for the bond is due; in the sample it is

Oct. 15, 1984. Note that you must enter the day, month, and year for settlement and maturity dates.

If you type in zero in the coupon (annual interest) area, the formula calculates both the conventional YTM, using semiannual compounding, and the true

YTM. I provided this feature because I've found that some zero bond salespeople and ads don't always identify which kind of YTM they're quoting.

After you enter the coupon, price and number of bonds, type in an exclamation point to invoke the Calculate command. In 33 seconds (on a Model III), you'll see the YTM displayed on line 25.

BondYTM also calculates the accrued interest, the adjustment you must make for interest earned since the last interest payment before you bought or sold the bond.

The calculated price check tests the template's accuracy. The calculated YTM, entered automatically in the equation, should give you the bond's price.

Note that when you load the template, VisiCalc displays an error message, then recalculates. When the recalculation is complete, BondYTM is ready to use.

It Figures

The template's calculation area covers columns E-H. The calculation area has two parts: Cell E11 finds the number of days between the settlement and maturity dates, while the rest of the calculation area solves the nonlinear equation using the well-known secant method. Figure 2 shows BondYTM's formula listing.

BondYTM precalculates some variables, such as the number of full half-years and fractional half-years, in order to save computation time per step.

Column E contains the two initial estimates the secant method requires to solve the equation. The first is based on a familiar approximation of YTM. The formula sets the second estimate either 1/2 percent above or 1/2 percent below the first, depending on whether the bond's price is below or above par.

I avoid potential divide-by-zero problems by stopping the new iterations when the new estimate equals the old estimate, which is a function of the computer's accuracy. The capacity for nine iterations plus the initial guess provides ample accuracy.

This cell also contains a test for zero-coupon bonds and bonds bought at par. In these two special cases, BondYTM calculates YTM directly and quickly, bypassing all four columns and filling them with @NAs.

The calculations in column F and in cell C26 use the formula for the price of a bond on any date, not necessarily the coupon date. By industry convention, you approximate accrued interest by multiplying half the annual coupon by 1 minus the fractional half-year to the date of the next coupon payment.

The equation in column F is in the form $f(x)=0$ where all the variables are known except the estimated YTM, cal-

Figure 2. BondYTM's formula listing.

culated by the secant method in the prior step and taken from column H. The estimated YTM becomes more accurate as $f(x)$ approaches zero within VisiCalc's significant digits.

Column G is the absolute of column F. This part of the algorithm selects the most accurate estimated YTM in column H; that is, the estimated YTM with the lowest absolute value in column F. The @MIN function in cell G24 determines column F's lowest absolute value.

Cell H24 contains a series of chained @IF functions that determine which value in column H matches the lowest absolute value of $f(x)=0$ in column F. I used this particular select method to make the cell easily translatable by Lotus 1-2-3. ■

L.H. Southmayd uses his Model III for investment and tax planning. You can write to him at 27 Barclay Road, Scarsdale, NY 10583.

The template's days-between-dates algorithm is used with the permission of Spreadsheet newsletter, Stamford, CT.

Continued from p. 36

ments, and so on). It highlights relevant dates when it displays the calendar.

You use the calculator as you would any other calculator. Your current number appears at the top of the window, and the mathematical operands appear in the lower part of the window. The calculator does offer one nonstandard feature, the Auto key. When you press the A key just before closing the calculator window, the results of calculations you made appear on your current screen at the cursor location. You could, for example, insert a calculated value in a letter or annual report.

The index card window lets you enter text on an electronic 3- by 5-inch card. The same editing features available with Notepad are available here. Monte's Window organizes the index cards by subject line and lets you write up to eight lines of text for each one.

You move forward or backward through the cards in the file with the arrow keys, and you can copy the selected card to the note pad for printing or editing.

Index Cards' most powerful feature is the context search capability. You can enter a partial or complete text pattern as a search argument without regard to case.

Monte's Window supports CP/M system commands, too. From within the window, you can easily display the directory of any disk drive, the amount of free space on a drive, change the current default drive, and erase files.

With the CP/M window, you can also change the current user area any time. This is vital if you have a hard disk system with many user partitions, which is the only way CP/M segregates files (similar to MS-DOS's subdirectories).

And More

Monte's Window offers some clever features that Montezuma Micro doesn't advertise. For example, you've probably encountered CP/M's dreaded R/O error on a disk or file, forcing you to hit control-C to exit a program, thereby losing your files. Monte's Window won't accept this command, and it intercepts control-C's warm boot and tries to return you to the running program.

In addition, you can implement Monte's Window without using the shift keys: you just invoke the program through a system call to address 0040H (in the reserved CP/M area).

Conclusion

Monte's Window performs well. After the novelty of calling windows and using concurrent applications wears off, you'll find so many uses for the collection of programs that you won't know how you did without them. ■

Major Math For Math Majors

by Thomas L. Quindry

★ ★ ★

The **Math Master Series** runs on the Model III and requires one disk drive. PAB Software Inc., P.O. Box 15397, Fort Wayne, IN 46885, 219-485-6980. Various math modules \$24.95 to \$39.95 each.

Easy to use: ★ ★ ★ ☆ ☆
 Good docs: ★ ☆ ☆ ☆ ☆
 Bug free: ★ ★ ☆ ☆ ☆
 Does the job: ★ ★ ★ ☆ ☆

The Math Master Series of programs are highly specialized Basic language packages for the engineer, scientist, or math student, that is, the serious math user rather than the average computerist. The programs provide mathematical functions for matrix, polynomial, and vector arithmetic and fast Fourier transforms (FFTs), but they're somewhat awkward to use and the documentation isn't that enlightening.

PAB offers each math module separately, which is advantageous if you need only one module, but adds up to a lot of money if you have to buy them all. The modules perform their routines on matrix or array variables.

Up and Running

To use a particular function, you have to load the module and protect high memory. Next, you load and run the supplied initialization program. Then you run the Basic program containing the calls to the module, which are made through the /CMD statement. For example, to use the Matrix Master single-precision module, the statement `CMD MAT A = B + C`, sets matrix A equal to the sum of matrixes B and C.

The initialization program is the same for all modules. It sets up a DEFUSR function and calls it by way of the USR function to install the CMD pointer.

If you use more than one math module in a program, you have to use the Math Master executive module, which loads other modules. You can have only one module resident in a program at a time since the modules overlay practically the same memory area. The Math Master executive analyzes the /CMD function and loads the math functions as needed.

The Math Master Series has one major flaw. It provides no error-checking to verify that you've initialized a program: if you try to initialize a module more than once, the computer hangs up. And the series doesn't support Model III

TRSDOS's CMD L command to load the modules as needed, because you need to reinitialize.

The Modules

You can use each of the Matrix Master modules (single- or double-precision, scalar, or complex) to execute a series of math functions on a matrix: addition, subtraction, and multiplication; scalar (or complex) addition, subtraction, multiplication or division; transpose; inverse; scalar (or complex) variable assign; matrix assign; identity matrix, determinant; and disk or tape input/output functions.

The command structure is similar for each module and PAB provides an example of solving a simultaneous linear equation using the single-precision Matrix Master. The Matrix Master functions are matrix inverse and matrix multiply.

The single- or double-precision Poly Master modules provide a series of polynomial functions for initialization, math, and general manipulation. These modules perform addition; subtraction; multiplication; division; derivative; integral; assignment; value; greatest common divisor; normalize; scalar addition, subtraction, multiplication, and division; scalar assign; and disk and tape input/output functions. Command structure is similar for each module. The single- or double-precision Poly Root Master modules add the commands, Root and ROOTD, allowing polynomial root computations.

The single- and double-precision and scaled integer fast Fourier transform modules provide analyses using several different qualifiers. The qualifiers are real, inverse, Hanning weighting, magnitude, and phase of the transformed data. You don't have to use a qualifier, however, and you can input and output the arrays to a disk file.

Conclusion

The Math Master Series' documentation runs from only eight to 17 pages for each module. PAB assumes that the user has a working knowledge of matrix and/or fast Fourier transform arithmetic rules and terminology. The instructions are minimal and barely adequate.

This program could be easier to use. It is rather archaic to have to remember the correct memory size to protect each time you use one of the packages.

Though these problems exist, good math packages are hard to find. A highly technical user with specific applications would find these packages useful. Since similar packages are available for the IBM PC and Apple II, it would be easy to transport the Basic programs produced with a minimum of fuss. ■

The
Master Handicapper™ 
Series by Professor Jones

EVALUATES FROM RACING FORM!

Age	Gender	Post Today
Class	Jockey (Today)	Post Last
Condition	Jockey (Last)	Speed
Consistency	Length	Trainer
Earnings	Time of Year	Workouts

And gives you GRAPHIC REPRESENTATION of finish

PROGRAM 

GLD. Thoroughbred "Gold" Edition™
A "Full" featured thoroughbred analysis designed for the professional and serious novice **\$159.95** complete

EGLD. Enhanced "Gold" Edition™
"Gold" Edition with complete Master Bettor™ system integrated onto the same disk. This powerful program will transfer all horses and scores to the bet analysis with a "single keystroke" (Master Bettor™ included) **\$199.95** complete

GLTD. Limited "Gold"™
Enables Professional Handicappers to assign specific values to the racing variables they feel are important

PROFESSIONAL HANDICAPPING SYSTEMS

% Age 5	% Consistency 15	% Speed 10
Class 15	Jockey 15	Workouts 0
Condition 10	Trainer 5	Time of Year 0

Pro-Create 4.3

★★★★★

Pro-Create 4.3 runs on the Model 4 (64K) and requires one disk drive. Misosys, P.O. Box 4848, Alexandria, VA 22303. \$74.95.

Misosys's biggest change to their new version of Pro-Create is in their implementation of the editor/assembler. Previously, Pro-Create featured only EDAS, its combined editor/assembler; Pro-Create 4.3 not only includes EDAS, it also has stand-alone versions of EDAS's macro assembler and line editor.

In addition, Misosys includes Said in this package, an impressive full-screen text editor that supports many word processor features: insert and overtype, text delete and undelete, block copy and move, and string search and replace. Said also supports macro keys: the ability to edit three files at once on a 128K machine; a help display; a reverse Polish notation calculator for binary, hexadecimal, and decimal values; and customized keyboard mapping with an installation program.

Pro-Create offers enhancements to its original macro assembler, too; eight new expression operators; support for the Intel macros REPT, IRPC, and IRP; three new conditionals for controlling a program's assembly; an include assembler directive; an EXITM pseudo-op for premature exits from macro expansions; an Option pseudo-op altering the assembler switches from within the source code; and an MF switch that instructs the assembler to search the macro table before the opcode table. In addition, the assembler's easier to use than before.

—Mark D. Goodwin

Microsoft Word 2.0

★★★★★

Microsoft Word 2.0 runs on the Models 1000 and 1200 (256K) and requires two disk drives (color graphics recommended). Microsoft Corp., 10700 Northup Way, Bellevue, WA 98009. 206-828-8080. \$375 (includes mail merge and spelling checker with 80,000-word dictionary).

Just as a Ferrari shouldn't be your first car or an F-16 your first plane ride, Microsoft Word shouldn't be your first word processor. If you don't know basic word processing operations, like block moves and boldface, you can't appreciate Word for what it is: a first-strike thermonuclear word processor. This ain't no Scripsit. This ain't no HomeWord. This ain't no fooling around.

Word has more power than most users will ever need. Not only can it keep eight

windowed documents in memory at once and produce a finished book or magazine page on a laser printer, it makes editing with function keys almost as quick and simple as using a mouse. And with Microsoft's mouse, no other software (Macintosh included) is easier to use.

Word is an ultimate version of the Model 100's cut-and-paste editor. You use the function and arrow keys to cut, reformat, or otherwise manipulate text. The most recently cut text goes to a scrap buffer to be relocated or undeleted at a touch of the Insert key.

It also makes on-screen formatting a gleeful what-if game. A few keystrokes can display your text in centered italics, flush-right small caps, justified double or single underlining, indented boldface, or any combination you can think of.

Not only can Word display all these formats, it lets you specify type fonts, sizes, and different options for individual characters. The multilayered commands for these marvels take some practice, but their structure is logical and there's ample on-screen help.

For printing, Word replaces embedded commands with auxiliary disk files called style sheets. You can print text as a plain, double-spaced draft or as a single-spaced, justified, two-column final copy with footnotes, lowercase Roman-numbered pages, and extra space on inside margins for binding.

Before reviewing the IBM PC edition, I briefly tested the Tandy-packaged Word (version 1.15) for the 1000. I'm sure Tandy has updated to version 2.0 by now, but I'd still recommend the Microsoft package. Not only is it cheaper to buy at discount (advertised as low as \$239), but it has drivers for over 50 different printers, instead of only eight or 10 Tandy units.

—Eric Grevstad

The Norton Utilities 3.0

★★★★★

The Norton Utilities 3.0 runs on the Tandy 1000/1200/2000 (128K) or any IBM PC-compatible computer that runs MS-DOS 2.X. The Norton Utilities, 2210 Wilshire Blvd., Santa Monica, CA 90403. \$99.95.

If you've ever wished that you hadn't inadvertently erased a file or that you had an easy way to get more information on your disk files, The Norton Utilities can help—and at a bargain-basement price.

On boot-up, The Norton Utilities displays a menu from which you choose the individual utilities of interest. A graphics

EXPRESS CHECKOUTS

display indicates where each file resides on the disk and provides information about the file.

The package's 16 programs perform all sorts of disk magic. One utility, File Find, searches all directories for a given file name. Another (Text Search) searches all disk files for a specific text string. A third, Directory Sort, sorts entries contained in a specified directory by either file name, extension, date, and time or file size, and rewrites the directory, rearranging all entries in the specified order.

The Screen Attributes utility controls the background and foreground colors of your display, along with other screen attributes such as blinking, underlining, and reverse video. The System Information utility returns information about your computer such as the type of computer you're using, the revision level of your operating system, the number of logical disk drives, and the amount of memory in the system.

Without a doubt, the Norton Utilities is worth every penny, and it's easy to use to boot.

—Gary A. Shade

Mod-4 by Jack

★★★★

Mod-4 by Jack. Softcover, 218 pp. Crest Software, 2132 Crestview Drive, Durango, CO 81301. \$16.

While the *Model 4 Disk System Owner's Manual* is a good reference, its bloated size can limit its usefulness. *Mod-4 by Jack* puts essentially the same information into a more manageable 6-by-9-inch spiral-bound book. While it's missing some information, it is a good source for day-to-day needs.

Jack's organization is identical to that of the *Disk System Owner's Manual*. But *Mod-4 by Jack* is written in a more readable style than Radio Shack's manual. And the book uses better examples and illustrations to explain TRSDOS and Basic commands. The book also provides ample space for making notes for future reference.

Jack left out a few important facts, however. The book's only reference to the TRSDOS job control language (JCL) states that the JCL is useful and that you should read the manual for more details. Also, there aren't any explanations for the Basic Width statement and logical operators. Like the Radio Shack manual, *Mod-4 by Jack* doesn't provide any machine-language programming information.

Despite its few drawbacks, someone who refers to the manual every day might find *Mod-4 by Jack* more convenient than Radio Shack's oversized opus.

—Mark D. Goodwin

5 MEG HARD DRIVE

NEW!

Comes complete with cable
and choice of software driver*
(CPM, LDOS, TRSDOS)

- 10 Megabyte Hard Drive..... **\$899**
- 15 Megabyte Hard Drive..... **1095**
- 30 Megabyte Hard Drive..... **1495**

SYSTEM FEATURES

- For TRS-80 Model 3-4-4P
- One Year Parts & Labor Warranty
- Size Rated After Format
- Continuous Duty Power Supply
- Error Checking & Correcting
- Continuous Duty Fan
- Size 11.5" x 12.5" x 5.0"
- All Contacts Gold Plated

*Model 3 requires LDOS
Model 4 requires TRSDOS 8.2 or Montezuma Micro CP/M 2.2

There are firms which offer benefits, experience or products seemingly too good to be true. Now why would you want to expose yourself to unhappiness when Aerocomp has a proven record of thousands of happy, satisfied TRS-80 customers. Just take a minute to look through back issues of this magazine. You won't find many companies that have been around as long as Aerocomp. We fully support TRS-80 computers and most all operating systems including CP/M 2.2. Aerocomp leads the way to low hard disk prices so you can afford to enjoy the benefits of increased storage and faster disk I/O. These units are precision engineered, tested and delivered complete and ready to use, right from our stock. Each unit is guaranteed for one year parts and labor. You can count on us to be here if you should ever need us. As always, your satisfaction is assured with our 14 day free trial offer. If, for some reason, you are dissatisfied with our drive merely return it for a full refund (less shipping). How can you go wrong? Specify the software driver of your choice and start enjoying your computer's real capability. Do it today! Call our toll-free number now!

MODEL 1 DOUBLE DENSITY BOARD

Add 80% more capacity to your disk system with the Double Density Controller (DDC) from Aerocomp.

The Story

Some products have what it takes to seem to last forever. Our "DDC" is one of those products. What it does is allow you to operate your TRS-80 Model 1 disk system in double density. In this case double density means almost doubling the storage capacity of your diskettes. Single density, the way Radio Shack designed your Model 1 expansion interface, organizes your disk into 10 sectors per track. Each sector contains 256 bytes of data for a total storage capacity of 2,560 bytes or 2.5K per track times the number of tracks your drive is capable of addressing. Double density, on the other hand, writes 18 sectors per track each containing 256 bytes for a total of 4,608 bytes or 4.5K. That is 80% more data in the same space. Why didn't Radio Shack do that in the beginning, you ask? Well it costs money to do double density because it is more difficult to do than single density and the data is harder to capture reliably. That means more cost and the Model 1 was meant to be a low-cost computer for the masses. Therefore, no double density for the original Model 1.

The Facts

Other companies introduced double density controllers for the Model 1 but they were not so good. We waited and waited but, even new models failed to correct problems with data separation that kept cropping up. So we went to work and came up with a new design to cure the old problem. At last! A double density controller for the Model 1 with a higher probability of data recovery than with any other double density controller on the market then or since. Our analog design phase lock loop data separator has a wider capture window than the digital types the others use. This allows high resolution data centering. Our "DDC" analog circuit allows infinitely variable tuning. The attack and settling times are optimum for 5.25" diskettes. The oft-stated fears of adjustment problems rumored by digital dilettantes have been proved groundless by thousands of satisfied users the world over. The bottom line here is state-of-the-art performance and reliability.

Copyright 1985

ORDER YOURS TODAY

TRS-80 Model 1 disk system owners who are ready for reliable double density operation will get 80% more storage per diskette; single and double density data separation with far fewer disk I/O errors; single density compatibility; simple plug-in operation. You will need a disk operating system that has the necessary double density software. All the popular DOS's (except TRSDOS) have the drivers. We have put together two special packages in the event you don't already have one of the more popular DOS's.

COMPLETE DRIVES Add \$6 S&H

Fits TRS-80 Models 1,3,4 and the Color Computer plus the others that use standard drives. The drive of your choice is mounted in a sturdy, all-steel cabinet. An external gold plated drive connector allows cabling without disassembly of the cabinet. Half-high drives come in a full-size cabinet that will hold and power our half-high drives. Single drives have a panel covering the unused space allowing a second drive to be added at any time. All are shipped fully assembled ready to use. Specify silver or white enclosure.

FREE TRIAL OFFER

Use your Aerocomp hardware product for up to 14 days. If you are not satisfied for ANY REASON (except misuse, damage or improper handling), return it (insured) in the original shipping container for a full purchase price refund, less shipping. Sorry, this offer does not apply to software. Defective software will be replaced. Any hardware/software specials will be prorated and the software will be charged at the regular unbundled price. We have confidence in our products and we know you will be satisfied.

WARRANTY

We offer a one year warranty on parts and labor against defects in materials and workmanship. In the event service becomes necessary for any reason you will find our service department fast, friendly and cooperative. We want to keep you happy. Out of warranty repairs are also available.

100% BURN-IN and TEST

All our products are burned-in and fully tested prior to shipment. We want you to receive an item ready-to-go. AEROCOMP means reliability!

ORDER NOW!

Call our toll-free number service and place your order. Have your American Express, Mastercharge or Visa number ready. We will not charge your card until the day we ship your order. You may order by mail using your credit card, check or money order. Personal and company checks are welcome and cause no shipping delay as long as they are bank printed and the signature exactly agrees with the name printed on the check. We will ship surface COD with no deposit but all COD's require cash or a cashier's check on delivery. Texas residents add 6% State Sales Tax. No tax collected on out of state shipments. Canadian addresses add \$20 to your order if over \$550 for customs documentation.

TRS-80 Model III & 4 DISK CONTROLLER and DRIVE KITS

Convert your cassette Model III or 4 to disk operation with one of our complete kits. You receive our own advanced disk controller board with gold plated edge contacts capable of 4-drive operation; our own power supply; plated steel mounting towers complete with RFI shield plus all the cables and hardware necessary. Detailed instructions are included. All you need is a screwdriver and a pair of pliers. System kits come with 40 track single-side drives or just order the basic kit and pick the drives you want from the selection in the next column.

OUR FAMOUS MODEL I STARTER PACKAGE

If you have a Model I and an Expansion Interface this is what you need to get started with disks. Included is one 40 track single-side disk drive completa with matching silver case and power supply, a 2-drive cable, a TRSDOS 2.3 disk operating system and TRSDOS manual plus all insurance and delivery charges to your door (lower 48 states).

Yours for only **\$199**

You can add our renown "DDC" double density controller to either the Radio Shack or the LNW Expansion Interface for 80% more storage capacity on your drive. Order it at the same time as our starter package above and we'll pay the shipping. Go ahead, you deserve increased density. See the opposite page for the latest technical details.

Color Me In

Sharp's four-color, high-resolution plotter, the CE-515P (\$399), connects to most personal computers that run Basic. Sharp will initially bundle the plotter with Softkey's Keychart software, which provides IBM PC compatibility.

The plotter uses black, blue, green, and red colors that change over automatically. For more information, contact Sharp Electronics Corp., System Division, 10 Sharp Plaza, Paramus, NJ 07652, 201-599-3853.

Circle 567 on Reader Service card.

Changing Around

Gee-Whiz Convert (\$99.95) from The Alternate Source converts IBM and IBM-compatible Basic programs to Model 4 Basic. It even handles graphics programs written for the Radio Shack or Graftix Solution high-resolution boards. In addition, Gee-Whiz includes several functions and subroutines that you can incorporate into your new Model 4 programs.

Contact The Alternate Source (704 N. Pennsylvania, Lansing, MI 48906, 517-482-8270) for further information.

Circle 555 on Reader Service card.

Manage Yourself

Little Brother (\$99) is a new data management system from Logical Systems Inc. It's available for the Model 4/4P running TRSDOS 6.2 or PC/MS-DOS 2.0 users.

Little Brother handles up to 65,534 records where each record can contain up to 1,024 bytes. It supports up to 64 different data fields of from 1-254 bytes. Nine dif-

CE-515P, a multifunction plotter from Sharp.

ferent types of data fields are available.

For ease of use every function is menu-driven and on-line help is always available.

Contact Logical Systems Inc., 8970 N. 55th St., P.O. Box 23956, Milwaukee, WI 53223, 414-355-5454 for more details.

Circle 565 on Reader Service card.

Author's Helper

Autoref (\$89.95) compiles reference lists of citations made in manuscripts. It works with most word processors and runs on MS-DOS, CP/M-80, and CP/M-86 computers and on the Models I, II, III, 4, 12, and 16.

Autoref automatically finds author citations (in name/date format) in text and alphabetizes them. Then it retrieves a complete reference from a master reference file and builds the document's bibliography. You can create and maintain the master file with Autoref, a word processor, or a data base manager like dBase II or III.

For more information, contact Scilab Inc., P.O. Box 614, Guilderland, NY 12084, 518-355-3363.

Circle 557 on Reader Service card.

Super Data

The Institute for Scientific Analysis Inc. offers a new version of Super, a Xenix-based menu-driven data base management system for the Models 16 and 6000.

Super provides you with simple-to-use data entry, data manipulation, and a report generation system. Automatic record locking lets multiusers access the same data files. The system can handle up to 60 fields and 32,767 records.

The program requires MBasic and sells for \$295. For more information, contact ISA, 36 E. Baltimore Pike, Suite 106, Media, PA 19063, 215-566-0801.

Circle 561 on Reader Service card.

Open Windows

SASSE (\$75) from En Fleur Corp. is a free-form filling system for the Model III that takes full advantage of its windowing capability.

The program offers a word processor and multitasking features. You can write memos and save them to disk, call the help or operations manual in the midst of an operation, print or sort a file while working on another, and stack seven windows of

various information at one time.

Using simple key commands you can edit, write, read, sort, and print any file. SASSE displays each file within its own window and you can scroll them up or down. You can display four record windows within a file at any given time. When you have selected a record you can enlarge the window to show a full view of the text.

You need a 48K, two-disk Model III and TRSDOS to run SASSE. For more details, contact En Fleur Corp., 2494 Sun Valley Circle, Silver Spring, MD 20906, 301-598-4532.

Circle 572 on Reader Service card.

Phonics Fun

K-12 MicroMedia's new phonics program for the Models III and 4. Starting with Phonics, provides more than 1,200 games for practicing phonics with fourth- to sixth-graders. You can use it individually or in small groups. K-12 MicroMedia also offers Winning with Phonics for grades 5-7.

Both packages are \$39.95. Contact MicroMedia (172 Broadway, Woodcliff Lake, NJ 07675, 800-922-0401) for more details.

Circle 559 on Reader Service card.

Assembly Line

Christopher Lampton's 280 Assembly-Language Programming for Radio Shack, Timex Sinclair, Adam, and CPM Computers presents a tutorial on Assembly language for programmers already familiar with Basic or other high-level languages.

IN MASSACHUSETTS CALL (617) 486-3193

Wow! Over 170 Formats!

HYPERCROSS/XT TRS80 - CP/M - MS-DOS File Transfer

Now you can CROSS the barrier between computers! Using HYPERCROSS you can COPY files between TRS-80 disks and those from many different CP/M and IBM-PC type computers. If you have access to more than one kind of computer, or you are changing to a new machine then you need HYPERCROSS to transfer your text files, BASIC, FORTRAN, PASCAL or C programs, Visicalc files, general ledger and accounting files, data bases and even binary files.

HYPERCROSS lets you do this directly on your own TRS-80 or MAX-80 without using cables. Just put a disk from a CP/M or PC/MS-DOS (Tandy 1000, 1200, 2000 too) in one drive and a TRS-80 type DOS disk in another drive and you can copy files back and forth at will! You can copy multiple files in one go, and even copy directly from one alien disk format to another. You can also **FORMAT** an alien disk, display the **DIRECTORY**, and **KILL** files.

*Formats supported: IBM-PC and MS-DOS compatibles include DOS 1.1, 2.x/3.0 single and double sided and Tandy 2000. CP/M from Aardvark to Zorba, including Cromemco, OEC, Epson, HP, IBM CP/M 86, Kaypro, LNW, MAX-80 Morrow, NEC, Osborne, Otrona, Sanyo, Superbrain, Teletek, Televideo, TRS-80 all Model I, III and IV CP/Ms, Xerox, Zenith plus many others. **New version XT/2.0-Plus supports an additional 100 formats including PC J-formats.**

Hardware required: 48K and 2 drives minimum, Model 1 needs a doubler. Some formats need double sided or 80 track drives. 80 track skip supported.

PRICES including disk, manual and shipping. We will match any advertised price.

Hypercross CP/M with 40 single sided formats **\$48.95**

Hypercross PC/MS-DOS standard sided formats only **\$48.95**

Hypercross XT 2.0 with 70 CP/M and PC formats **\$88.95**

Hypercross XT 2.0-Plus Now with 170 formats **\$128.95**

Upgrade at any time for price difference plus \$5 plus old disk.

Please specify TRS-80 Model I, III, 4/4P, or MAX-80.

HYPERZAP 3.2c Disk Magic!

Do you want to back up your precious copy of Copycat 3 or SU. Do you want to fix or modify a disk - if so then you need **HYPERZAP!** On the market for over 2 years, **HYPERZAP** is more than just another disk copying program - it is the program for analyzing, copying, repairing, creating floppy disks or all kinds. It will copy any TRS-80 format as well as many others such as CP/M, PC, CoCo etc. Specially designed to handle mixed density sectors on any track in any sequence. Many features for reading, writing, editing track and sector data. **Hyperzap** is the tool that lets you be in charge.

Make your own self booting disks. Take your own CMO file and turn it into a dual booting Mod 1/III/IV disk. **Autopilot mode** allows learn, saves and repeats procedures. Disk comes with fascinating examples.

Hardware needed: 48K 1 drive minimum. One version for all TRS-80 models 1, 3 and 4. Manual and disk **\$49.95** ppd. Separate **Max-80** version available.

Arranger II Disk Index System

World's finest disk cataloging system. At last you can find that file when you want it. **Arranger** will CATALOG, SORT and FIND up to 11000 files last! Runs on any Model I, III or IV and automatically recognizes virtually any DOS even double sided ones!

Highly recommended - **\$49.95** - \$3 ship

NEW PRODUCTS

Tournament Chess from Micro-Labs Inc.

\$10.90 from Franklin Watts Inc., 387 Park Ave. S., New York, NY 10016. 212-686-7070.

Circle 554 on Reader Service card.

Check Mate

Tournament Chess (\$49.95) lets you play chess against a friend or the computer (Models I, III, 4, and 4P). The program uses standard block graphics. If you have a Micro-Labs or Radio Shack high-resolution board installed, the chessboard and pieces are highly detailed.

You can select the following playing levels at any time: **Tournament**, **Rapid**, **Transit**, **Mate Finder**, and

move, turn the board, print out the current board, and save an unfinished game.

Tournament Chess is fast and provides complete game control with over 40 execution options and features. For more details, contact **Micro-Labs Inc.**, 902 Pinecrest, Richardson, TX 75080, 214-235-0915.

No More Surges

Perma Power Electronics has two Socket Plus rack-mount surge suppressors for under \$100 to protect sensitive circuitry from power line voltage transients.

Both suppressors have six outlets and a shutdown

NEW PRODUCT FOR AUTOMATION

USE YOUR TRS-80 MODEL III, IV or 4P:

- For direct measurement of: voltage, or alarm conditions
- With one resistor to measure: current, resistance, or 4-20 ma. signals
- With transducers to measure: acceleration, dewpoint, force, humidity, pH, position, pressure, temperature, velocity, viscosity, wind speed or direction
- With interfaces to turn power on/off, control analog voltage, motor speed, temperature, etc.

Note: We also manufacture the Model 100 A/D for the TRS-80* Model 100 Computer MODEL III, IV, or 4P—A/D, converter and digital interface for your TRS-80* Model III or IV:

- 0 to 4.096 volts full scale (adjustable)
- 12 bit integrating A/D converter (.025%)
- 16 analog voltage input
- 8 digital inputs, expansion to 24 bits
- 8 digital outputs, expansion to 24 bits
- 3 addressable output strobes

Price: **\$580** including software (\$5.00 for manual)

PRINTER OWNERS

Letters are received here on a regular basis from customers saying how much they really enjoy receiving our lists.

It's probably safe to say that the price lists issued here are different from most of the others. Maybe it's the chatty folksy style of writing? Perhaps it's the low, almost unbelievable, prices on printer cartridges? Again, it could be dealing with a dealer that understands the hobby Computer user and really cares about what you think?

Send your name and address today for a rather fat envelope of printer and computer related offers.

School Days

Scholarships Today (Module 1) gives you a list of financial aid programs sponsored by the federal and state government.

You will learn about Pell grants, guaranteed student loans, Plus loans, supplement-

tal educational opportunity grants, college work-study programs, national direct student loans, and sources of state aid.

For each type of financial aid, the exercises cover eligibility criteria, dollar amount available, application procedures, and deadlines. The program also writes custom letters of inquiry and includes a financial aid quiz.

Scholarships Today (\$65) runs on the Models III and 4. For more information, contact Jefferson Software, Systems Software Associates Inc., 723 Kanawha Blvd. E., Charleston, West Virginia 25301, 304-342-0769.

Circle 573 on Reader Service card.

Smart Connection

The Smart Switch Box (SSB1000) connects a modem and two peripherals to a single computer. It has one computer port and three peripheral ports (one dedicated to modems).

The Smart Switch Box uses straight-through 25-wire ribbon cables to make the correct RS-232 interconnection between the computer and the peripherals. It also indicates which piece of equipment is disabling data transfer if this type of problem occurs.

The box retails for \$159.95. For more information, contact IQ Technologies Inc., 11811 N.E. First St., Suite 308, Bellevue, WA 98005, 206-451-0232.

MULTIDOS 80/64 - FOR THE MODEL 4

New for your Model 4...A completely unique DOS...Not a rehash of TRSDOS 6...Not just another Model III DOS...A totally redesigned operating system for your Model 4.

- flip between 64 and 80 characters on the screen; 32 and 40 character widths also available
- runs Model III software
- use your extra 64K memory as a MEMDISK; automatically sets up MEMDISK as system disk, allowing use of the 0 drive for a data disk
- for 4P owners, never load MODELIII/A file again!
- disk I/O code written for Model 4; get fewer errors than you get using a Model III DOS
- a much faster BASIC; many enhancements and debugging tools
- over 41000 free bytes of memory in BASIC
- runs BASIC programs written for the Model III in 64 characters, or easily modified to 80 characters
- write programs using 80 character screen, function keys, and extra memory
- keyboard returns an extended character set; user controllable
- includes all the new features in 1.7 MULTIDOS

MULTIDOS 80/64 reads many disk formats, including all Model I/III DOS' and TRSDOS 6. If you're a Model III owner thinking about upgrading, this makes the transition easy.

MULTIDOS 80/64\$99.95

NEW VERSION MULTIDOS FOR MODEL I/III \$89.95

- includes a MEMDISK - set aside part of memory as a disk file
- for double-sided drives, select either one or two volume operation
- handles 8 inch drives
- all the great features of 1.6, including compatibility with all other DOS', plus many enhancements

NOTE: MULTIDOS 80/64 does not run TRSDOS 6 programs

The 4N1 card uses one slot on the Model 1000 for four functions.

Memory Lane

Micro Mainframe's multi-function memory card, the 4N1, lets you add up to 512K of additional memory to your Model 1000, thereby giving you the 1000's direct memory access feature, and includes a free RS-232 serial port.

The 4N1 also accepts an optional real-time clock module and/or an optional mouse, giving you four functions while using but a single expansion slot.

The card (with the serial

port) comes in four versions: without additional memory (\$259.95) and with 128K (\$309.95), 256K (\$469.95), or 512K (\$649.95).

Direct inquiries to Micro Mainframe, 11285-E Sunrise Gold Circle, Rancho Cordova, CA 95670, 916-635-3997.

Grafyx Solution™ Save \$100.00
High-Resolution Graphics for Mod 4/4P/III

Superior Hardware. The Grafyx Solution provides 153,600 pixel elements which are arranged in a 640 x 240 or on the Model III a 512 x 192 matrix. Hundreds of new business, personal, engineering, and educational applications are now possible. The hi-res display can be shown on top of the standard display containing text, special characters, and block graphics. This simplifies program debugging, text labeling, and upgrading current programs to use graphics. The Grafyx Solution fits completely within any tape or disk based Model 4, 4P, or III. Installation is easy with the plug-in, clip-on board.

Superior Basic. Over 20 commands are added to the Basic language. These commands will set, clear or complement points, lines, boxes, circles, ellipses, or arcs. The hi-res screen can be printed on any of 20 popular printers or saved or loaded to disk without leaving Basic. Areas may be filled in with any of 256 patterns. Sections of the screen may be saved and then put back using any of five logical functions. Labels can be printed in any direction. The viewing area can be changed. The entire screen can be complemented or cleared. Graphics Basic provides dot densities of 640 x 240, 320 x 240, 160 x 240, and 160 x 120, all of which can be used in the same display.

Superior Software. The board comes with over 40 programs and files which make it easier to use, serve as practical applications, demonstrate its capabilities, and serve as programming examples. The software works with TRSDOS 1.3, 6.1.2, 6.2, LDOS, NEW-DOS80, and DOSPLUS. The Grafyx Solution is also supported by a number of optional applications programs: Draw, Bizgraph, xT.CAD, 3D-Plot, Mathplot, Surface Plot, Biorhythm & USA, Music.

The Grafyx Solution package is shipped complete for \$199.95 (reduced from \$299.95). A manual for review is \$15. Payment may be by check, Visa/MC, or COD. Domestic shipping is free on pre-paid orders. Texas residents add 5 1/2% tax.

Services Rendered: Tandy's Warranty Policy

Send your questions dealing specifically with Tandy products, services, or policies to Ask Tandy, 80 Micro, 80 Pine St., Peterborough, NH 03458. A representative at Tandy's Fort Worth, TX, headquarters supplies all answers published here.

Q: I'm in the market for a Tandy 1000. Some companies advertise Tandy products at discounts, but I hear that Tandy might not service products bought by mail order. What's the real story?

A: Our standard warranty covers any Tandy product as long as you're the original owner and you bought it from a Radio Shack Computer Center, store, or authorized dealer. Your original sales slip is the vehicle by which you get warranty service; nothing else is valid. Making a purchase by mail doesn't affect the warranty. My suggestion, however, is always to deal with your local outlet, on which you'll lean for support. We require Radio Shack company-owned stores to provide service and support in a timely manner for all products bought through any authorized channel.

Q: I've read that the Tandy 2000's MS-Assembler doesn't support two Intel 80186 instructions, PUSHA and POPA. Why?

A: The assembler's manufacturer, Microsoft, didn't support those commands. Tandy didn't push for them, in order to insure some software compatibility between the 2000 and our 8088-based computers, the Tandy 1200 HD and 1000. I'm told Microsoft has a new assembler that does support those instructions, but I don't know when it will become available. Also, we haven't decided if you'll see it as a Tandy product.

Q: Will Tandy transfer Model III disk-based software to Model I format if a customer requests it?

A: When a Model III program worked reasonably well on the Model I, Tandy usually made it available for the I. However, some Model III programs just wouldn't run in the amount of disk space available on a Model I.

You could always transfer a program from a III to a I via an RS-232 port. But if we didn't offer the program for the I, it's likely you wouldn't be pleased with the results. And no, we don't offer a conversion service.

Q: SuperScript has a problem: When one document contains multiple line spacings, it prints out correctly, but the line number on the status line is wrong. Will you fix it?

A: On investigation, we found that the problem could be solved, but at the cost of slowing SuperScript's overall operation significantly. Our merchandising people decided to leave the current version as-is. If and when we do a major rewrite of SuperScript, fixing that problem is definitely on our wish list.

Q: I need help with a serious Tandy 1000 problem. With a monochrome monitor, when MS-DOS boots up, the display's intensity is inadequate, even with the brightness control set to maximum. I know MS-DOS's Mode CO command, or Basic's SCREEN 0, I will improve it, but what do I do when running IBM PC software?

A: You're right about the problem. Two possibilities. First, we can do a hardware modification: check with your local repair facility. Second, as you boot up, press the F12 key when the buzzer sounds. That makes the computer think you're using a color monitor, forcing a higher intensity configuration at the monochrome port.

Q: I bought a pretty complete Tandy 1000 system. After receiving the hard disk drive board I ordered, I'm upset to find that it works only with a secondary hard disk drive and not with the 15-megabyte primary drive I already have. Nobody told me this. What am I supposed to do now?

A: The difference between a primary and a secondary 15-megabyte hard disk drive is that the former contains a controller board; the latter doesn't. On the Tandy 1000, the board you bought is the controller. It should be easy to convert your primary drive to a secondary one. All it takes is disconnecting the controller card; also,

you'll need some cables. It does mean you have a pretty expensive controller board sitting unused, but at least you won't have to buy another drive.

Q: I have a DWP-210 printer, and I would like to get colored printer ribbons: blue, brown, and so forth. But I can't find them anywhere. Why? Not to be able to order a \$6 ribbon is almost ridiculous.

A: While we realize some customers would kill for ribbons of a particular color, we've found the demand isn't enough to justify our producing them. The DWP-210 ribbon is a standard Diablo Hy-Type II ribbon. The ribbons you want should be easy to find in distribution.

Q: I completely disagree with your response on sending out customer support letters to registered TRS-80 owners (February 1985, p. 144). I've been a registered owner of a Model I, and I have yet to receive one word about it.

A: That's probably because we haven't sent out anything. The program started long after Tandy discontinued the Model I. It's a software registration program. The only Model I package for which we mailed a notice was the Model III version of SuperScript. We contact owners only when we have a software update notice.

Q: Will Tandy be coming out with a 128K upgrade for the Color Computer?

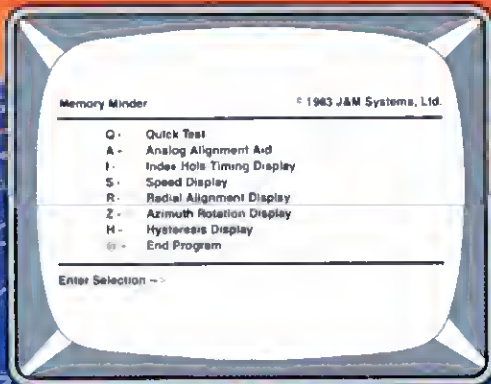

A: No.

A couple of notes: In the June 1985 issue, I answered a question about getting replacements for lost software manuals. I said they were available on a case-by-case basis. Wrong. Tandy's policy changed about a year ago. Replacement software manuals aren't available under any circumstances. We've joined other industry leaders like Microsoft and Lotus in an attempt to discourage software piracy. Sorry for misleading you.

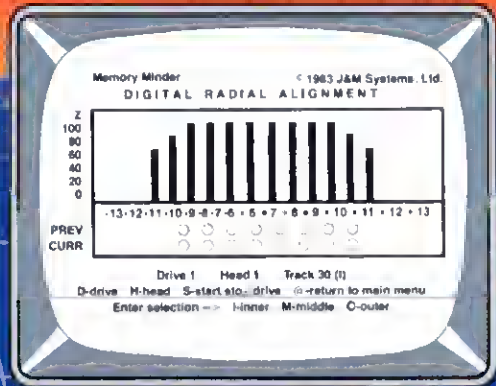

Also, I've gotten several questions about products that are available for more than one Tandy computer. When you write with a question, please specify what computer you own. ■

MEMORY MINDER ^{T.M.}

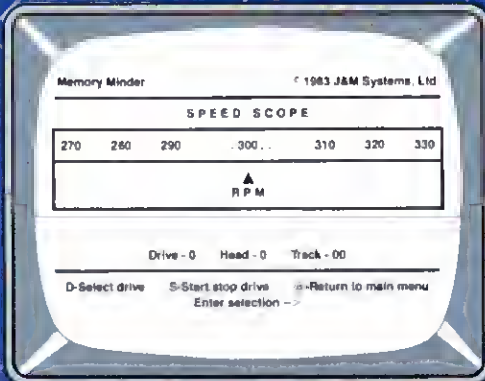

... A UNIQUE APPROACH TO DISK RELIABILITY!

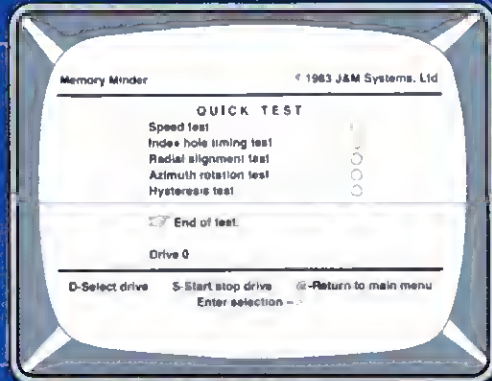

Select any one of seven tests to perform preventive maintenance or to isolate problems. Simple, single-letter commands make MM easy to use! Use MM to align the head, adjust the Index hole detector, or adjust the speed.

Use the MM Radial Alignment Test to check the head alignment of your drives. No need for an oscilloscope or other expensive test equipment!

Check the motor speed of your drives. Or, you can even use the Speed Test to adjust the drive speed. No need for any test equipment!

Use the Quick Test to quickly and automatically test five of the most important performance parameters of your drive. Monitor your drives for long term drift. Isolate problems quickly and automatically!

PROTECT YOUR DATA.

Now you can make sure your data is being recorded properly by the use of the revolutionary *Memory Minder*.

The Memory Minder from J & M Systems, tests your disk's performance and calibration without any additional equipment! It measures your disk's performance and displays it on your screen.

This is the most comprehensive disk diagnostic program available for your TRS-80 microcomputer. You can even adjust drive alignment while watching the display!

Spot problems *before* they endanger your data! If you own a disk drive, you *need* the *Memory Minder*!

FREE--TRS-80 Mod I, III & 4 programs supplied on DosPlus (minimum system). Complete DosPlus also available.

The VERSABUSINESS™ Series

Each VERSABUSINESS module can be purchased and used independently, or can be linked in any combination to form a complete, coordinated business system.

VERSARECEIVABLES™ \$99.95
VERSARECEIVABLES™ is a complete menu-driven accounts receivable, invoicing, and monthly statement-generating system. It keeps track of all information related to who owes you or your company money, and can provide automatic billing for past due accounts. VERSARECEIVABLES™ prints all necessary statements, invoices, and summary reports and can be linked with VERSALEDDGER II™ and VERSAINVENTORY™.

VERSAPAYABLES™ \$99.95
VERSAPAYABLES™ is designed to keep track of current and aged payables, keeping you in touch with all information regarding how much money your company owes, and to whom. VERSAPAYABLES™ maintains a complete record on each vendor, prints checks, check registers, vouchers, transaction reports, aged payables reports, vendor reports, and more. With VERSAPAYABLES™, you can even let your computer automatically select which vouchers are to be paid.

VERSAPAYROLL™ \$99.95
VERSAPAYROLL™ is a powerful and sophisticated, but easy to use payroll system that keeps track of all government-required payroll information. Complete employee records are maintained, and all necessary payroll calculations are performed automatically, with totals displayed on screen for operator approval. A payroll can be run totally, automatically, or the operator can intervene to prevent a check from being printed, or to alter information on it. If desired, totals may be posted to the VERSALEDDGER II™ system.

VERSAINVENTORY™ \$99.95
VERSAINVENTORY™ is a complete inventory control system that gives you instant access to data on any item. VERSAINVENTORY™ keeps track of all information related to what items are in stock, out of stock, on backorder, etc., stores sales and pricing data, alerts you when an item falls below a preset reorder point, and allows you to enter and print invoices directly or to link with the VERSARECEIVABLES™ system. VERSAINVENTORY™ prints all needed inventory listings, reports of items below reorder point, inventory value reports, period and year to-date sales reports, price lists, inventory checklists, etc.

VERSALEDDGER II™ \$149.95
VERSALEDDGER II™ is a complete accounting system that grows as your business grows. VERSALEDDGER II™ can be used as a simple personal checkbook register, expanded to a small business bookkeeping system or developed into a large corporate general ledger system **without any additional software.**

- VERSALEDDGER II™ gives you almost unlimited storage capacity (300 to 10,000 entries per month, depending on the system),
- stores all check and general ledger information forever,
- prints tractor-feed checks,
- handles multiple checkbooks and general ledgers,
- prints 17 customized accounting reports including check registers, balance sheets, income statements, transaction reports, account listings, etc.

VERSALEDDGER II™ comes with a professionally-written 160 page manual designed for first-time users. The VERSALEDDGER II™ manual will help you become quickly familiar with VERSALEDDGER II™, using complete sample data files supplied on diskette and more than 50 pages of sample printouts.

SATISFACTION GUARANTEED!

Every VERSABUSINESS™ module is guaranteed to outperform all other competitive systems, and at a fraction of their cost. If you are not satisfied with any VERSABUSINESS™ module, you may return it within 30 days for a refund. Manuals for any VERSABUSINESS™ module may be purchased for \$25 each, credited toward a later purchase of that module. All CP/M based Computers must be equipped with Microsoft BASIC (MBASIC or BASIC 80).
